Research, Quality, Competitiveness Attilio Stajano, 2008-09-22 The European Union EU was launched as a response to the economic dominance of the United States and to a lesser degree the Soviet Union The nations of Western Europe were too small to compete against large scale and diversified economies on their own Six countries eventually expanding to 27 and counting took a series of steps toward progressively deeper integration the removal of internal tariffs the construction of a common external tariff the elimination of many but not all non tariff barriers leading to a single market and the adoption of a common currency by 15 of the member states The EU today equals and even exceeds the U S on many key indicators of performance In the process two similar but nonetheless divergent models of social and economic life stand in contrast with each other The U S is more committed to capitalism and does little to dilute its harsh edges while the nations of Europe support wider social safety nets and more active regulation of commercial activity to mute the crueler aspects of the free market Until recently the economic dynamism of the U S called into question whether the so called European social model was sustainable in an era of globalization The EU was slipping in competitiveness and was being challenged by new global powerhouses like China and India Although the U S economy has slowed there is little indication that European countries are capable of leveraging the situation to their advantage

Innovation, Resources and Economic Growth Alberto Quadrio Curzio, Marco Fortis, Roberto Zoboli, 2012-12-06 The

analysis of the interactions between natural resource scarcity technological innovation and the dynamics of economic systems has a long standing tradition in economics During the 1980s and the early 1990s a new phase of these interactions initiated under the effects of technological revolution and the problem of the environment The general concept behind this book is that the issue of natural resources and the environment in relation to economic growth can not be addressed without due consideration for the effects of technological innovation on the dynamics of economic systems Technological innovation alone however is not a sufficient condition for the sustainability of economic growth Policies may have a role in solving the international distribution problems generated by the non converging development path of developed and developing countries In particular the new international order shaped by the events of the 1980s made it possible for world management to address the problems of poverty and the environment
