*Valorisation of Agro-industrial Residues - Volume II: Non-Biological Approaches* Zainul Akmar Zakaria, Cristobal N Aguilar, Ratna Dewi Kusumaningtyas, Parameswaran Binod, 2020-03-23 The world's population is expected to reach the eight billion mark very soon As a result there is a need for increased industrial and agricultural production to ensure human wellbeing This in turn generates huge amounts of waste Current waste treatment solutions are effective but usually require huge capital investment are labour intensive and potentially lead to hazardous by products This book presents the latest non biological approaches to address issues related to the abundance of waste offering insights into best practices in various regions around the globe It highlights techniques such as chemical extraction pyrolysis and ultrasonics and a number of chapters include individual case studies to further enhance readers understanding This comprehensive reference resource is intended for graduate students researchers and scientists and is also a valuable addition to all agriculture and biotechnology libraries

Progress in Reaction Kinetics G. Porter, 2016-06-03 Progress in Reaction Kinetics discusses the main themes of chemical kinetics It covers such topics as the reactions of halogen

atoms and methylenes mercury photosensitized reactions anionic polymerization cis trans isomerisation and protolytic reactions The book provides a good illustration of the quantitative rate studies in biochemical systems The experiments to determine the relative rate constants are shown and analyzed The process of photosensitization involves absorption of light energy by a strongly absorbing substance The methods to identify the reactions of carbonyl compounds organic acids and esters are presented as well as the reactions of alcohols ethers and epoxides The degree of reaction of some haem compounds is explained A chapter of the book focuses on the kinetic treatment of processes that takes place in a series of steps Such procedures are called consecutive processes A sample of these is the rate determining step approximation The book will provide useful information to chemists chemical engineers students and researchers

**Physical Chemistry of Fast Reactions** B. Levitt, 2012-12-06 The chapters in this book are devoted to the elementary reactions of small molecules in the gas phase with some emphasis on reactions important in combustion The first three chapters cover experimental measurements made at high temperatures mainly using shock waves and flames the final chapter describes discharge flow methods near room temperature The authors all active in the fields they describe were asked to aim at a level intermediate between a textbook and a review designed for readers not already familiar with this branch of chemical kinetics We hope the book will prove especially useful to research workers in related subjects to research students and perhaps as source material for the preparation of lectures The examples have been chosen to illustrate the theoretical basis of the topics rather than attempt a complete coverage Professors Wagner and Troe describe the remarkable progress made in recent years in measuring dissociation rates for small molecules Tests of unimolecular reaction theories are usually made in the fall off region of pressure the kinetics change from first order to second order as the pressure is reduced For large molecules this region lies below atmospheric pressure and is relatively easily accessible For molecules with four or less atoms however the fall off region lies well above atmospheric pressure it has been explored using the high pressure shock tube techniques developed by the authors
