

1.4 Wind with Miller

Introduction

U.S. wind energy installations produce enough electricity on a typical day to power the equivalent of more than 9.7 million homes. It is estimated that wind power in America will eliminate an estimated 62 million tons of carbon dioxide annually. This is the equivalent to taking 10.5 million cars off the road. Wind energy will conserve approximately 20 billion gallons of water annually, which would otherwise be consumed for steam or cooling in conventional power plants.

In this activity you will learn how wind energy is generated and how a wind turbine works using the website [Wind with Miller](#).

Equipment

- Engineering notebook
- Pencil
- Computer with Internet access
