[Handbook of Reading Disability Research](#) Anne McGill-Franzen, Richard Allington, 2010-09-17. Bringing together a wide range of research on reading disabilities, this comprehensive Handbook extends current discussion and thinking beyond a narrowly defined psychometric perspective. Emphasizing that learning to read proficiently is a long-term developmental process involving many interventions of various kinds, all keyed to individual developmental needs, it addresses traditional questions: What is the nature or causes of reading disabilities? How are reading disabilities assessed? How should reading disabilities be remediated? To what extent is remediation possible, but from multiple or alternative perspectives? Taking incursions into the broader research literature represented by linguistic and anthropological paradigms as well as psychological and educational research, the volume is on the front line in exploring the relation of reading disability to learning and language, to poverty and prejudice, and to instruction and schooling. The editors and authors are distinguished scholars with extensive research experience and publication records and numerous honors and awards from professional organizations representing the range of disciplines in the field of reading disabilities. Throughout, their contributions are contextualized within the framework of educators struggling to develop concrete instructional practices that meet the learning needs of the lowest-achieving readers.

Handbook of Early Literacy Research Susan B. Neuman, David K. Dickinson, 2011-10-10. The field of early literacy has seen significant recent advances in theory, research, and practice. These volumes bring together leading authorities to report on current findings, integrate insights from different disciplinary perspectives, and explore ways to provide children with the strongest possible literacy foundations in the first 6 years of life. The Handbook first addresses broad questions about the nature of emergent literacy, summarizing current knowledge on cognitive pathways, biological underpinnings, and the

importance of cultural contexts Chapters in subsequent sections examine various strands of knowledge and skills that emerge as children become literate as well as the role played by experiences with peers and families Particular attention is devoted to the challenges involved in making schools work for all children including members of linguistic and ethnic minority groups and children living in poverty Finally approaches to instruction assessment and early intervention are described and up to date research on their effectiveness is presented *Choice* ,2007
