Shamim, Malik Mubeen Ahmad, R. S. Upadhyay, 2024-01-09 Rice is a widely consumed crop around the world that has tremendous importance and is cultivated almost everywhere except Antarctica However various biotic and abiotic stresses have a negative effect on rice cultivation seriously reducing its yield This volume examines the bacterial and fungal pathogens that cause rice diseases and explores how to manage these diseases It covers the economic and environmental impact of rice fungal diseases on global food security and proceeds to delve into diagnostic methods for rice fungal pathogen detection and discusses current strategic and applied biotechnological methods for the effective management of rice fungal diseases *Diseases of Field Crops: Diagnostics and Management* Vaibhav Kumar Singh, Jameel Akhtar, Krishna Pratap Singh, 2024-11-18 This edited book is a compilation of the chapters on the recent advances made in the field of disease management in various field crops It covers host resistance regulatory mechanism as well as non chemical methods and computer based applications in disease management Molecular marker assisted selection proteomic approaches CRISPR Cas mediated technology to improve food quality and minimize negative public health impact associated with crop diseases is also discussed Plant diseases continue to be major challenge to global crop production especially field crops inflicting not only crop yield losses to farmers but also decline quality as well as nutritional value leading threat to global food security According to FAO statistics there is a need of 70% steady increase in agricultural production to fulfil the food requirements of 9.1 billion populations by 2050 and annual global crop losses due to pests and diseases have been estimated to be about 30% Therefore the book aims at bringing out a comprehensive information on field crop diseases plant disease detection and diagnosis monitoring forecasting forewarning and management The book is very useful for students teachers researchers planners administrators and also the end users at national and international level Taxonomy and Ecology of Indian Fungi K. G. Mukerji, C. Manoharachary, 2010 Fungal world embodies diversified groups which colonize multiply and survive in nature on many macro and micro ecological niches and substrates Fungi are eukaryotic achlorophyllous filamentous or

unicellular living organisms which are ubiquitous and cosmopolitan in distribution Of the estimated 1.5 million fungal species more than 98,000 fungal species have been described Approximately 28,000 fungal species are reported from India The fungi play an important role in biodegradation recycling of organic matter pharmaceutical industries agriculture medicine industry bioremediation waste management and other activities In India hardly we have database but for few books on Indian fungi compiled from time to time by some mycologists The present book includes 16 chapters contributed by eminent mycologists Chapters include data on diversity taxonomy ecology and application of Helicosporous fungi genus Spegazzinia Rusts and Smuts Chaetomiaceae Macrophomina Rhizoctonia Russula wild edible fungi poisonous mushrooms insect fungi and other related aspects This book will be very useful and a valuable addition to the existing literature on the same subject

Seed-Borne Diseases of Agricultural Crops: Detection, Diagnosis & Management Ravindra Kumar, Anuja Gupta, 2020-05-18 The global population is increasing rapidly and feeding the ever increasing population poses a serious challenge for agriculturalists around the world Seed is a basic and critical input in agriculture to ensure global food security Roughly 90 percent of the crops grown all over the world are propagated by seed However seed can also harbour and spread pathogens e.g. fungi bacteria nematodes viruses etc which cause devastating diseases Seed borne pathogens represent a major threat to crop establishment and yield Hence timely detection and diagnosis is a prerequisite for their effective management The book *Seed Borne Diseases of Agricultural Crops Detection Diagnosis Management* addresses key issues related to seed borne transmitted diseases in various agricultural crops Divided into 30 chapters it offers a comprehensive compilation of papers concerning the history of seed pathology importance of seed borne diseases seed borne diseases and quarantine seed health testing and certification detection and diagnosis of seed borne diseases and their phytopathogens host parasite interactions during development of seed borne diseases diversity of seed borne pathogens seed borne diseases in major agricultural crops non parasitic seed disorders mechanisms of seed transmission and seed infection storage fungi and mycotoxins impact of seed borne diseases on human and animal health and management options for seed borne diseases We wish to thank all of the eminent researchers who contributed valuable chapters to our book which will be immensely useful for students researchers academics and all those involved in various agro industries **Next-Generation Plant**

cereal crops against fungal bacterial and viral diseases are covered in this book that was put together by a group of experts. These include genetics, genome editing systems and nano biotechnological tools. Cereal crops are mainly the world's leading food crops and feed a large share of the world population. However, external factors such as pathogens have often threatened their productivity. Like wheat, rice, maize, oats, barley, millet and storage, etiology, epidemiology and diseases in cereal crop management. In addition, the importance of crop genetics and genomics in combating pathogens has been discussed. This book offers up-to-date information on new methods such as the potential of the genome editing system for crop improvement, in particular the CRISPR-Cas system. The current volume also talks about identification, plant breeding, genome editing and nanotechnology tools that can be used to fight disease in cereal crops. This book is good for students, teachers and researchers who study biotic stress in cereals as well as scientists who study nanotechnology, disease resistance, pathogen biology, genome editing, agriculture sciences and future biotechnology.
