

3. Survey and Sample Design

In fall 2000, 700 direct-care providers within MTFs and 600 purchased-care providers at network facilities were sampled using data obtained from claims records. In this chapter, we discuss the development of the survey questionnaire and our sampling strategy and design.

Questionnaire Development

Separate baseline (i.e., pre-LIF) questionnaires were developed for each of the two sample populations—direct-care prescribers and purchased-care prescribers. Questionnaire development for both surveys began in September 2000.

The first steps in developing the questionnaire were to identify the domains that would be examined in the survey and then to locate appropriate reference materials. The reference materials included two instruments developed by the VA Pharmacy Benefits Management Strategic Initiatives Group and RAND for the Survey of Pharmacy Benefits of VA providers in 2000. We also reviewed the questionnaire used in the VA Formulary Study conducted by the U.S. General Accounting Office in 2000. Both the direct-care and purchased-care questionnaires were developed concurrently through the pilot-testing phase and were designed to collect the same domains of information.

Direct-Care Prescribers' Questionnaire

The draft survey instrument for direct-care prescribers was reviewed by four MTF physicians/researchers¹ in early December 2000. Input was received from three of these individuals, and various formatting and wording changes were made in response to the reviewers' comments. A pilot test of the instrument was planned, but, given logistical and timing issues, we were unable to conduct this pilot test before the instrument had to be fielded in spring 2001 (see Chapter 4 for an explanation of why fielding needed to occur in the spring.) However, input was obtained from various TMA staff members and incorporated in the final version of the questionnaire.

¹The physicians/researchers are colleagues of Peter Gossman, the principal investigator of this study.
