Muddling Through:

Information Systems for Emergency Management Bartel Van De Walle, Murray Turoff, Starr Roxanne Hiltz, 2014-12-18 This book provides the most current and comprehensive overview available today of the critical role of information systems in emergency response and preparedness. It includes contributions from leading scholars, practitioners and industry researchers and covers all phases of disaster management: mitigation, preparedness, response and recovery. Foundational chapters provide a design framework and review ethical issues. Context chapters describe the characteristics of individuals and organizations in which EMIS are designed and studied. Case Study chapters include systems for distributed microbiology laboratory diagnostics to detect possible epidemics or bioterrorism; humanitarian MIS and response coordination systems. Systems Design and Technology chapters cover simulation, geocollaborative systems, global disaster impact analysis and environmental risk analysis. Throughout the book, the editors and contributors give special emphasis to the importance of assessing the practical usefulness of new information systems for supporting emergency preparedness and response rather than drawing conclusions from a theoretical understanding of the potential benefits of new technologies.

Spectrum Auctions Geoffrey Myers, 2023-02-15 Access to the radio spectrum is vital for modern digital communication. It is an essential component for smartphone capabilities, the Cloud, the Internet of Things, autonomous vehicles and multiple other new technologies. Governments use spectrum auctions to decide which companies should use what parts of the radio spectrum. Successful auctions can fuel rapid innovation in products and services, unlock substantial economic benefits, build comparative advantage across all regions and create billions of dollars of government revenues. Poor auction strategies can leave bandwidth unsold and delay innovation, sell national assets to firms too cheaply or create uncompetitive markets with high mobile prices and patchy coverage that stifles economic growth. Corporate bidders regularly complain that auctions raise their costs while government critics argue that insufficient revenues are raised. The cross-national record shows many examples of both highly successful auctions and miserable failures. Drawing on experience from the UK and other countries, senior regulator Geoffrey Myers explains how to optimise the regulatory design of auctions from initial planning to final implementation. *Spectrum Auctions* offers unrivalled expertise for regulators and economists engaged in practical auction design or company executives planning bidding strategies. For applied economists, teachers and advanced students, this book provides unrivalled insights in market design and public management. Providing clear analytical frameworks, case studies of auctions and stage-by-stage advice, it is essential reading for anyone interested in designing public-interest and successful spectrum auctions.

Social Science and Policy Challenges Georgios Papanagnou, 2011-01-01 Producing scientific knowledge that can inform solutions and guide policy making is one of the most important functions of social science Nonetheless if social science is to become more relevant and influential so as to impact on the drawing and execution of policy certain measures need to be taken to narrow its distance from the policy sphere This decision is less obvious than it seems Both research and experience have proved that policy making is a complex often sub rational interactive process that involves a wide range of actors such as decision makers bureaucrats researchers organized interests citizen and civil society representatives and research brokers In addition social science often needs to defend both its relevance to policy and its own scientific status Moving away from instrumental visions of the link between social research and policy this collective volume aims to highlight the more constructed nature of the use of social knowledge

Israel's Public Diplomacy Jonathan Cummings, 2016-07-27 Hasbara explaining the Israeli

variant of public diplomacy is the subject of endless domestic debate Israel in the 1960s and 1970s saw many changes in its political and military international stage This was a period of unusually intensive attention to the problems of hasbara beginning with the appointment of Yisrael Galili as minister with responsibility for government communications and ending with the dismantling of the Ministry of Information in 1974 less than a year after it had been created Israel had only been able to muddle through and at the end there was no greater sophistication in Israeli thinking and no stronger administrative structure in spite of many organizational changes Accessible to anyone interested in the history of Israel as well as political history and diplomacy the book serves as a case study of how entrenched political culture can limit policy options and casts light on the emergence of public diplomacy as a feature of foreign policy
