Neurosurgical Classics, 1965 **Neurosurgical Classics** Robert H. Wilkins, 1992 Originally published in 1973 *Neurosurgical Classics* features a compilation of more than 500 pages of classical neurosurgical works published prior to 1940. Papers by an array of pioneering neurosurgeons are highlighted. Included are landmark works by Harvey Cushing, Percival Bailey, Paul Bucy, Walter Dandy, Wilder Penfield, and more. *Neurosurgical Classics* provides informative insight into the development of neurosurgery in the first half of the 21st century. Perfect text for medical students, residents, and any one interested in the history of this fascinating medical specialty. Distributed by Thieme for the American Association of Neurological Surgeons. *Neurosurgical Classics II* Robert H. Wilkins, Gloria K. Wilkins, 2000 The editors of *Neurosurgical Classics II* have selected 58 neurosurgical works from around the world. Organized into 31 groups, each was selected based on their present or historical importance. Each work is preceded by an introduction containing pertinent historical background material and references. Each of the 58 works was reproduced as closely as possible to the original format. Since the specialty of neurosurgery has changed significantly since 1940, the focus of *Neurosurgical Classics II* is on more recent developments, especially those of present or historical importance to current neurosurgeons. This text is the perfect companion to *Neurosurgical Classics*. Distributed by Thieme for the American Association of Neurological Surgeons.

Landmark Papers in Neurosurgery Reuben D. Johnson, Alexander L. Green, 2014-06-05 Evidence-based medicine is a concept that has come to the fore in the past few years. Clinicians are increasingly encouraged to practise patient management based on available evidence in the scientific literature. For example, new pharmacological therapies are only used when large randomized trials have proven that a particular drug is better than existing ones. This is also the case in surgical specialties, although surgery has traditionally seen a lack of use of this information, with individual surgeon's preferences being most influential in treatment choices. However, more recently, there has been a large expansion of trials and studies aimed at providing surgeons with information to guide their choices using firm evidence. This new edition has been revised and expanded to include new data where relevant and also features a new chapter on pituitary surgery. *Landmark Papers in Neurosurgery* Second Edition remains a key collection of the most important trials and studies in neurosurgery, allowing the reader to rapidly extract key results and making it essential reading for all neurosurgeons and trainees in the field. *Textbook of Neurosurgery* Prakash Narain Tandon, 2012 *Textbooks of Operative Neurosurgery* (2 Vol.) Ramamurthi, 2005 The first book to be published in this region, it describes the scientific basis of the procedures as also their indications, scope, and limitations. Alternative approaches available for various disease entities are included. **A History of Neurosurgery** Samuel H. Greenblatt, T. Forcht Dagi, Mel H. Epstein, 1997-01-01 *A History of Neurosurgery* is the first thorough book on the history of neurosurgery published since 1951. The book is organized around a specific historiographic framework that traces the advancement of the specialty. Included are chapters on ancient trepanation, MacEwen's first use of

the combined technologies of anesthesia antisepsis and cortical localization in 1879 to plan and perform craniotomies the emergence of Harvey Cushing's leadership the evolution of modern neurosurgical techniques and technology and much more
