Jeffrey,2012-12-06 X ray and neutron crystallography have played an increasingly important role in the chemical and biochemical sciences over the past fifty years The principal obstacles in this methodology the phase problem and computing have been overcome The former by the methods developed in the 1960 s and just recognised by the 1985 Chemistry Nobel Prize award to Karle and Hauptman the latter by the dramatic advances that have taken place in computer technology in the past twenty years Within the last decade two new radiation sources have been added to the crystallographer s tools One is synchrotron X rays and the other is spallation neutrons Both have much more powerful fluxes than the previous sources and they are pulsed rather than continuous New techniques are necessary to fully exploit the intense continuous radiation spectrum and its pulsed property Both radiations are only available from particular National Laboratories on a guest user basis for scientists outside these National Laboratories Hitherto the major emphasis on the use of these facilities has been in solid state physics and the material engineering and biological sciences We believe that there is equivalent potential to applications which are primarily chemical or biochemical **Fifty Years of Neutron Diffraction, The Advent of Neutron Scattering** George Edward Bacon,1987 This book aims to trace the history of neutron scattering from its pioneer days to give an outline of the achievements in its main fields of application notably magnetism chemistry lattice dynamics and biology and some account of its present status Articles are contributed by pioneers who have worked in the subject for more than 40 years With stories and reminiscences of the early days in fifteen different countries the book captures something of the flavour and opportunities of neutron scattering and shows the changes in the way of life of neutron experimenters over the past fifty years **Chemical Abstracts Service Source Index** American Chemical Society.

Chemical Abstracts Service,1990 The CAS Source Index CASSI Search Tool is an online resource intended to support researchers and librarians who need accurate bibliographic information This free resource can be used to quickly and easily look up or confirm publication titles and abbreviations as well as CODEN ISBN or ISSN codes The CASSI database contains a listing of publications indexed by Chemical Abstracts Service CAS since 1907 *Molecular Spectroscopy Volume 6* ,1979 This product is not available separately it is only sold as part of a set There are 750 products in the set and these are all sold as one entity Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume NBS Special Publication ,1980 **ERDA Energy Research Abstracts** ,1977 *Nuclear Magnetic Resonance Volume 9* Graham Alan Webb,1971 Annotation As a spectroscopic method Nuclear Magnetic Resonance NMR has seen spectacular growth over the past two decades both as a technique and in its applications Today the applications of NMR span a wide range of scientific disciplines from physics to biology to medicine Each volume of Nuclear Magnetic Resonance comprises a combination of annual and biennial reports which together provide comprehensive of the literature on this topic This Specialist Periodical Report reflects the growing volume of published work involving NMR techniques and applications in particular NMR of natural macromolecules which is covered in two reports NMR of Proteins and Acids and NMR of Carbohydrates Lipids and Membranes For those wanting to become rapidly acquainted with specific areas of NMR this title provides unrivalled scope of coverage Seasoned practitioners of NMR will find this an invaluable source of current methods and applications Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research Compiled by teams of leading authorities in the relevant subject areas the series creates a unique service for the active research chemist with regular in depth accounts of progress in particular fields of chemistry Subject coverage within different volumes of a given title is similar and publication is on an annual or biennial basis *International Tables for Crystallography, Volume C* E. Prince,2004-01-16 International Tables for Crystallography is the definitive resource and

reference work for crystallography and structural science Each of the volumes in the series contains articles and tables of data relevant to crystallographic research and to applications of crystallographic methods in all sciences concerned with the structure and properties of materials Emphasis is given to symmetry diffraction methods and techniques of crystal structure determination and the physical and chemical properties of crystals The data are accompanied by discussions of theory practical explanations and examples all of which are useful for teaching Volume C provides the mathematical physical and chemical information needed for experimental studies in structural crystallography This volume covers all aspects of experimental techniques using all three principal radiation types X ray electron and neutron from the selection and mounting of crystals and production of radiation through data collection and analysis to interpretation of results Each chapter is supported by a substantial collection of references and the volume ends with a section on precautions against radiation injury Eleven chapters have been revised corrected or updated for the third edition of Volume C More information on the series can be found at <http://it.iucr.org>
