Our Modern Stone Age:

Our Modern Stone Age Robert Latimer Bates, Julia A. Jackson, 1982-01-01 Our Modern Stone Age Robert Latimer Bates, Julia A. Jackson, 1982 Corruptible Brian Klaas, 2021-11-09 An absorbing provocative and far reaching Kirkus Reviews starred review look at what power is who gets it and what happens when they do based on over 500 interviews with those who temporarily at least have had the upper hand from the creator of the Power Corrupts podcast and Washington Post columnist Brian Klaas Does power corrupt or are corrupt people drawn to power Are tyrants made or born Are entrepreneurs who embezzle and cops who kill the result of poorly designed systems or are they just bad people If you were suddenly thrust into a position of power would you be able to resist the temptation to line your pockets or seek revenge against your enemies To answer these questions Corruptible draws on over 500 interviews with some of the world's top leaders from the noblest to the dirtiest including presidents and philanthropists as well as rebels cultists and dictators Some of the fascinating insights include how facial appearance determines who we pick as leaders why narcissists make more money why some people don't want power at all and others are drawn to it out of a psychopathic impulse and why being the beta second in command may actually be the optimal place for health and well being Corruptible also features a wealth of counterintuitive examples from history and social science you'll meet the worst bioterrorist in American history hit the slopes with a ski instructor who once ruled Iraq and learn why the inability of chimpanzees to play baseball is central to the development of human hierarchies Based on deep unprecedented research from around the world and filled with unexpected insights the most important lesson of Corruptible is that when psychopaths inadvertently reveal their true selves the institutions that they plague must take action that is swift brutal and merciless Business Insider **Adapting Minds** David J. Buller, 2006-02-17 Was human nature designed by natural selection in the Pleistocene epoch The dominant view in evolutionary psychology holds that it was that our psychological adaptations were designed tens of thousands of years ago to solve problems faced by our hunter gatherer ancestors In this provocative and lively book David Buller examines in detail the major claims of evolutionary psychology the paradigm popularized by Steven Pinker in The Blank Slate and by David Buss in The Evolution of Desire and rejects them all This does not mean that we cannot apply evolutionary theory to human psychology says Buller but that the conventional wisdom in evolutionary psychology is misguided Evolutionary psychology employs a kind of reverse engineering to explain the evolved design of the mind figuring out the adaptive problems our ancestors faced and then inferring the psychological adaptations that evolved to solve them In the carefully argued central chapters of Adapting Minds Buller scrutinizes several of evolutionary psychology's most highly publicized discoveries including discriminative parental solicitude the idea that stepparents abuse their stepchildren at a higher rate than genetic parents abuse their biological children Drawing on a wide range of empirical research including his own large scale study of child abuse he shows that none is actually supported by the evidence Buller argues that our minds are not adapted to the Pleistocene but like the immune system are continually

adapting over both evolutionary time and individual lifetimes We must move beyond the reigning orthodoxy of evolutionary psychology to reach an accurate understanding of how human psychology is influenced by evolution When we do Buller claims we will abandon not only the quest for human nature but the very idea of human nature itself Unf*ckology Amy Alkon,2025-06-25 Amy Alkon presents Unf ckology a science help book that knocks the self help genre on its unscientific ass You can finally stop fear from being your boss and put an end to your lifelong social suckage Have you spent your life shrinking from opportunities you were dying to seize but feel that s just who I am Well screw that You actually can change and it doesn t take exceptional intelligence or a therapist who s looking forward to finally buying Aruba after decades of listening to you yammer on Transforming yourself takes revolutionary science help from Amy Alkon who has spent the past 20 years translating cutting edge behavioral science into highly practical advice in her award winning syndicated column In Unf ckology Alkon pulls together findings from neuroscience behavioral science evolutionary psychology and clinical psychology She explains everything in language you won t need a psych prof on speed dial to understand and with the biting dark humor that made Good Manners for Nice People Who Sometimes Say F ck such a great read She debunks widely accepted but scientifically unsupported notions about self esteem shame willpower and more and demonstrates that Thinking your way into changing as so many therapists and self help books advise is the most inefficient way to go about it The mind is bigger than the brain meaning that your body and your behavior are your gym for turning yourself into the new confident you Fear is not just the problem it s also the solution By targeting your fears with behavior you make changes in your brain that reshape your habitual ways of behaving and the emotions that go with them Follow Amy Alkon s groundbreaking advice in Unf ckology and eventually you ll no longer need to act like the new you you ll become the new you And how totally f cking cool is that **Out of Our Minds** Felipe Fernández-Armesto,2020-10-06 A stimulating history of how the imagination

interacted with its sibling psychological faculties emotion perception and reason to shape the history of human mental life The Wall Street Journal To imagine to see what is not there is the startling ability that has fueled human development and innovation through the centuries As a species we stand alone in our remarkable capacity to refashion the world after the picture in our minds Traversing the realms of science politics religion culture philosophy and history Felipe Fern ndez Armesto reveals the thrilling and disquieting tales of our imaginative leaps from the first Homo sapiens to the present day Through groundbreaking insights in cognitive science Fern ndez Armesto explores how and why we have ideas in the first place providing a tantalizing glimpse into who we are and what we might yet accomplish Unearthing historical evidence he begins by reconstructing the thoughts of our Paleolithic ancestors to reveal the subtlety and profundity of the thinking of early humans A masterful paean to the human imagination from a wonderfully elegant thinker Out of Our Minds shows that bad ideas are often more influential than good ones that the oldest recoverable thoughts include some of the best that ideas of Western origin often issued from exchanges with the wider world and that the pace of innovative thinking is under threat
