Radiation Protection Gyoujin Cho, 2013-10-02 Radiation Protection A Systematic Approach to Safety is a collection of papers that deals with the control management and prevention of toxic agents One paper presents design measures evaluated in a balanced program as a practicable method to lessen occupational radiation exposure Another paper cites the radiation protection aspects practiced in the decommissioning of the Fuel Reprocessing Plant at Trombay which was designed to chemically process irradiated nuclear fuel One paper describes a methodology to evaluate a collective dose of exposure through different routes following the release of radioactive material into the atmosphere These routes include 1 inhalation of the material from the initial cloud or that arising from the ground 2 external irradiation from radioactive decay of the material in the cloud or in the air 3 and as ingestion of radionuclides transferred through the food chain One paper compares the chemical and radiation hazards to man using an analytical model based on radiation biological concepts at the molecular level to show the effects of other agents The analytical model is also capable of predicting that a synergistic interaction between two different mutagenic agents can occur at the molecular level The collection will prove useful for nuclear physicists and scientists occupational health professionals and researchers in the field of nuclear medicine and engineering

Radiation Protection of Workers (ionising Radiations). International Labour Office,1987

Report of the Committee of Experts on the Application of Conventions and Recommendations International Labour Office,2012 The Committee of Experts

on the Application of Conventions and Recommendations whose work constitutes the cornerstone of the ILO's supervisory system on international labour standards has just published its annual report **Safety and Health in the Iron and Steel Industry** International Labour Office, 2005. The practical recommendations in this publication reflect the changes that have taken place in the iron and steel industry over the last 20 years or so and changes to the ILO's approach to developing codes of practice. A leaner, flexible, more highly skilled workforce, new technology and a less prescriptive, more systems-oriented approach to addressing safety and health are reflected in the revised Code. It is intended to provide guidance to ILO constituents and all those responsible for addressing safety and health throughout the iron and steel industry. The general provisions of the Code cover general responsibilities, duties and rights, the legal framework, safety and health management, reporting, recording and notification of work-related injuries and diseases, ill health and incidents and health services. Guidance on industry-specific prevention and protection includes furnaces and ovens, foundries handling molten material, rolling mills and coating lines and recycling. There are also sections on competence and training, personal protection, emergency preparedness and welfare. Annexes to the Code include workers' health surveillance, surveillance of the working environment, occupational exposure limits and chemicals used in the iron and steel industry. This code replaces an earlier code that was adopted in 1981.
