Radio Occultations Using Earth Satellites A Wave Theory Treatment:

Radio Occultations Using Earth Satellites William G. Melbourne, 2005 the wave theory foundations of today's radio occultation techniques Forty years ago the premier radio occultation problem was how to profile the atmosphere and radius of Mars using signals sent by the Mariner 4 spacecraft Researchers then could rely on ray theory based techniques for accurate analysis of the thin uniform Martian atmosphere Today's radio occultation challenges mostly involve communications platforms and related data instrument systems and applications in the Earth's own atmosphere To deal with the density and complexity of this multilayered medium an analytical framework that goes beyond ray theory is needed Setting the cutting edge for the field *Radio Occultations Using Earth Satellites A Wave Theory Treatment* develops a purely wave theoretic approach to occultation analysis This approach yields more nuanced results than either ray or hybrid ray wave methodologies offer and proves suitable for the many variables at work in today's problems This groundbreaking text provides An introduction to the general theory of radio occultations Development of ray theory and scalar diffraction treatments of radio propagation processes Development of a wave theoretic treatment of the above wave propagation processes The correspondence between wave and ray theories A discussion of how to use a wave theoretic approach to infer the refractive properties of the propagation medium from a time series set of observations of the propagated wave's phase and amplitude A comprehensive resource that clearly defines the latest topics and methodologies *Radio Occultations Using Earth Satellites* is a must have text for engineers scientists students and managers in satellites communications navigation deep space and planetary exploration aerospace atmospheric science physics and engineering The Deep Space Communications and Navigation Series is authored by scientists and engineers with extensive experience in astronautics communications and related fields It lays the foundation for innovation in the areas of deep space navigation and communications by disseminating state of the art knowledge in key technologies

Radio Occultation Method for Remote Sensing of the Atmosphere and Ionosphere Yuei-An Liou, 2010-02-01 The book is devoted to radio occultation RO remote sensing of the Earth's atmosphere and ionosphere as a global method of monitoring This technique used the radio links satellite to satellite when a satellite receiver setting or rising behind the Earth's atmosphere is relative to a satellite emitter of radio waves During setting the radio ray perigee moves through the ionosphere and ionosphere Atmospheric and ionospheric effects arise in most cases owing to influence of a zone near the radio ray perigee and cause significant variations of the amplitude phase and frequency of the radio waves These variations enable determination of the altitude profiles of temperature pressure refractivity density humidity and turbulence in the atmosphere distribution of the electron density in the ionosphere and the wave phenomena at different altitudes with a global coverage The aim of this book consists of the systematic description of the different approaches results of investigation and perspectives of the RO remote sensing as a tool for investigations of the atmosphere and ionosphere

Parker, Rodney L. Anderson, 2014-06-03 Based on years of research conducted at the NASA Jet Propulsion Laboratory, **Low Energy Lunar Trajectory Design** provides high level information to mission managers and detailed information to mission designers about low energy transfers between Earth and the moon. The book answers high level questions about the availability and performance of such transfers in any given month and year. Low energy lunar transfers are compared with various other types of transfers and placed within the context of historical missions. Using this book, designers may reconstruct any transfer described therein as well as design similar transfers with particular design parameters. An Appendix Locating the Lagrange Points and a useful list of terms and constants completes this technical reference. Surveys thousands of possible trajectories that may be used to transfer spacecraft between Earth and the moon including transfers to lunar libration orbits, low lunar orbits and the lunar surface. Provides information about the methods, models and tools used to design low energy lunar transfers. Includes discussion about the variations of these transfers from one month to the next and the important operational aspects of implementing a low energy lunar transfer. Additional discussions address navigation, station keeping and spacecraft systems issues. **Low-Noise Systems in the Deep Space Network** Macgregor S. Reid, 2008-09-29 The book explores the low noise microwave systems that form the front end of all DSN ground receiving stations. It explains why the front end of each antenna is key to establishing the sensitivity, polarization, frequency diversity and capabilities of the receiving chain and therefore the entire ground station. **Book Review Index**, 2006 Every 3rd issue is a quarterly cumulation. **The British National Bibliography** Arthur James Wells, 2005 **New Horizons in Occultation Research** Andrea Steiner, Barbara Pirscher, Ulrich Foelsche, Gottfried Kirchengast, 2009-09-18 This book presents edited and peer reviewed papers from the 3rd International Workshop on Occultations for Probing Atmosphere and Climate (OPAC 3) held in Austria. It provides a key reference on the current status in the field and looks toward new horizons. *Scientific and Technical Aerospace Reports*
