Growing Pains Walter Wehrmeyer,Yacob Mulugetta,2017-10-19 Environmental management is a global phenomenon embracing all businesses in all countries whether or not there already exists an organised response to managing environmental impacts Today there are gross inequalities between the world s richest and poorest nations in terms of income distribution consumption patterns access to resources and environmental impact Yet both the developed north and the developing south are committed at least in words to achieving sustainable development Public awareness of environmental issues in the North has been rising in recent years and further degradation is now largely minimized through more stringent

regulatory regimes voluntary agreements and growing consumer and stakeholder pressure on corporations Still the north is continuing to lead an environmentally unsustainable lifestyle as environmental improvements are nullified by overall increases in consumption levels In the south a billion people still do not have access to the most basic needs Poor countries need to accelerate their consumption growth if they are to ensure that the lives of their people are enriched However with rapid economic growth and corresponding increases in consumption now under way their environmental impact is soon to become substantially greater In a world that strives towards stemming global crises such as climate change the path already taken by the rich and high growth economies over the past century cannot be repeated by the south if the desired objective is to create a future that is truly sustainable Growing Pains examines environmental management in the south from a number of perspectives It is designed to stimulate the discussion about the role that corporations and national and international organizations play in sustainable development It does not offer panaceas as each country has its own problems and opportunities and after almost 50 years of failed panacea oriented economic development policy transfer from the north to the south it is time to abandon hope for universal solutions and instead look to individual approaches that work The book is divided into five themes globalization the role of business a focus on national strategies trade and the environment and the organizational and structural challenges of sustainable development With contributions from an outstanding collection of authors in both the developed and developing worlds including UNIDO the Thailand Environment Institute Arthur D Little Inc Shell Peru IUCN the Russian Academy of Sciences and IIED this important and unique new book presents a body of work that will provide essential reading for businesses working in developing countries environmental and developmental NGOs and researchers engaged in the debate and sharing of best practice in this increasingly critical subject area

Why Governments Waste Natural Resources William Ascher, 1999 Drawing on 16 case studies from Africa Asia and Latin America reveals the complex political and programmatic reasons why government officials in developing countries often willfully adopt wasteful natural resource policies

The Political Economy of the Environment James K. Boyce, 2002-01-01 Professor Boyce's work is an excellent example of how ecological economics can be done in an objective evidence based approach that can put issues on the agenda in a manner where they will be taken seriously by other scholars This is a well written and provocative book that should encourage further research on all these important issues David I Stern International Journal of Social Economics This succinct and sometimes provocative book sets out to document quantify and explain the ways in which inequalities of wealth and power create an uneven apportionment of environmental costs across the world It offers a combination of theoretical analysis and empirical evidence to support the author's central contention that greater democratisation and changes in society's relationship with nature are paramount for achieving the dual goals of environmental protection and sustainable development This book is immensely well written makes for a fascinating read Ian Bailey European Spatial Research and Policy Economic activities that degrade the environment do not simply pit humans

against nature They also pit some humans against others Some benefit from these activities others bear net costs from pollution and resource depletion In a provocative and original analysis James K Boyce examines the dynamics of environmental degradation in terms of the balances of power between the winners and the losers He provides evidence that inequalities of power and wealth affect not only the distribution of environmental costs but also their overall magnitude greater inequalities result in more environmental degradation Democratization movement toward a more equitable distribution of power therefore is not only a worthwhile objective in its own right but also an important means toward the social goals of environmental protection and sustainable development Combining theoretical analysis with empirical evidence from around the world James K Boyce demonstrates that changes in our relationship with nature ultimately require changes in our relationships with each other He maintains that a more democratic and environmentally sustainable future is possible but warns that it is not inevitable This book will appeal to students scholars policymakers and other readers interested in the environment economics and public policy Counting the Costs Jonathan Rigg,1995 Written by an international panel of specialists on Thailand who share a common concern for the environment this volume examines the causes and consequences of environment change both in the countryside and the urban areas of the Kingdom The papers however in no sense reflect a common view the authors embrace contrasting environmental ideologies in discussing a wide range of concerns These include the role of Buddhism and tourism in promoting sustainable development environmental systems of thought and action the practicalities of water pollution control in Bangkok and the Gulf of Thailand and the changing bases of life and livelihood among the hill peoples of the North The environment as an issue of concern is now important phase of assimilation interpretation prescription and action The papers in this volume reflect this change The Physical Geography of Southeast Asia Avijit Gupta,2005-02-24 This will be the first comprehensive and detailed volume on the physical environment of Southeast Asia and will be essential reading for geographers ecologists and environmental managers As the definitive reference work on the region it will cover all aspects of the biophysical environment and its current environmental problems and mangement practices The topics discussed range from a regional view of landforms and vegetation to specific cases including urban environments coral reefs volcanic hazards and the Mekong River Basin The contributors are distinguished scholarly and have a long association with Southeast Asia This is the fourth volume to be published in the Oxford Regional Environment series **Deadly Dances in the Bornean Rainforest** Rajindra K. Puri,2022-07-18 For two years Rajindra Puri lived and hunted with the Penan Benalui people in the rainforest of eastern Borneo in Indonesia Here he reports on Penan hunting techniques the knowledge required to be a successful hunter and the significance of hunting for Penan communities A hunt offers the opportunity for younger Penan to learn crucial survival skills knowledge of the environment local geography genealogy history and beliefs and values Songs and stories recount hunting adventures and legends while ceremonial dances demonstrate the coordination and agility required of the expert hunter The author makes a case for using

active participant observation in conjunction with standard ethnobiological research methods for documenting non verbal knowledge Included here are 21 months of hunting records and comprehensive appendices on game species and ethnobiological data This work will be useful to anthropologists conservation biologists and those interested in Indonesian ethnobiology The Roots of Japan's Environmental Policies Anny Wong,2018-10-24 The study focuses on Japan s policies toward international environmental issues and includes case studies on whaling deforestation in the tropics and acid deposition in Asia **Environmental Cooperation in Southeast Asia** Paruedee Nguitragee,2010-10-04 One of the most challenging environmental threats to the ten countries of the Association of Southeast Asian Nations ASEAN has been the haze the sickening and deadly cloud of smoky pollution caused by widespread burning of land and forests in Indonesia This book examines both the threat and response to it by analysing environmental cooperation in Southeast Asia from an international regime perspective Tracing the development of regional cooperation on the haze and evaluating the effectiveness of the cooperation the author argues that the haze crisis combined with the economic crisis of 1997 has profoundly challenged the ASEAN modus operandi and resulted in ASEAN s efforts to establish an environmental regime to cope with environmental challenges The emerging ASEAN haze regime is a unique case study of a regional environmental institution in multi levelled global environmental governance Based on in depth original research this case study is integrated into international relations political science and comparative political analysis literatures and contributes to a better understanding of processes within the regional organisation *Environmental History in the Pacific World* J.R. McNeill,2022-03-01 This volume brings together a set of key articles from the last 30 years pertaining to the environmental history of the Pacific basin It aims to treat the islands and waters of the Pacific as well as the lands around the Rim from New Zealand to Japan to California to Chile and is the first work of environmental history to take this inclusive view of the Pacific basin The focus is mainly on recent centuries but as environmental history requires at times the work also takes the very long view of millennia Several of the articles seek to bring a broad Pacific perspective to bear on their subjects while others use Pacific basin examples to try to establish broader theoretical points of interest to all who are drawn to the study of the interactions between nature and culture The book includes a bibliography of Pacific basin environmental history and an introduction that aims to sketch the contours and possible future directions of the field
