Rainy Season:

Guyana Kirk Smock, 2008 South America s often overlooked English speaking country lies far off the well trodden tourist path Guyana is the ideal destination for the discerning visitor seeking adventure Within its vast interior the Guiana Shield one of the four pristine tropical rainforests left in the world converges with the Amazon Basin creating a unique geography composed of coastal waters mangroves marshes savannas mountains and tropical rainforests Bordered by Venezuela Brazil Suriname and the Atlantic Ocean the lively locals a melting pot of East Indian and African descendants peppered with Chinese Europeans and Amerindians create a culture decidedly more Caribbean than Latin Roundabout Activity Book - C, 1994 The Books In This Series Guide Children Through Various Pictorial Activities Which Help Them In Developing Basic Concepts And Pre Reading Skills These Extensively Illustrated Books Also Provide Explicit Notes For Teachers The Worksheets Have Been Widely And Successfully Tested In Schools Books A B And C Focus On Concept Building Activities While Book D Teaches Pre Reading Skills In Hindi *The Asian Monsoon* Bin Wang, 2006-01-13 This is a timely interdisciplinary scientific overview of the atmosphere the ocean and the land surface as it interacts with physical chemical and biological processes The high level of detail sets it apart from other studies of monsoon meteorology The text includes analysis of paleoclimate records human influences on the monsoon climate and the economic impacts of the monsoon on economies and to human health *Buddhist Monastic Life* Môhan Wijayaratna, 1990-11-30 This 1991 book provides a brief yet detailed account of the ideal way of life prescribed for Buddhist monks and nuns in the Pali texts of the Theravada school of Buddhism The author describes the way in which the Buddha s disciples institutionalized his teachings about such things as food dress money chastity solitude and discipleship This tradition represents an ideal of religious life that has been followed in South and Southeast Asia for over two thousand years In previous writing on the early period of Buddhist monasticism scholars have usually tried to give an historical account of the evolution of the monastic order and so have seen the extant Vinaya texts as coming from distinct historical periods This book takes a different approach by presenting a synchronic account which allows the author to show that sources are in fact predominantly consistent and coherent

Yihui, 2013-03-09 The monsoon over China is one of the major components of the general circulation on a global basis Its activity bears a significant regional implication in East Asia and Southeast Asia Recently the remarkable relationship and teleconnection between this part of the monsoon and other regions over the world have been revealed However little of the overall picture of monsoons over China is known by meteorologists in English speaking countries This monograph provides the first opportunity to extensively introduce this subject and give a comprehensive and systematic description of the major aspects of monsoons over China with a special emphasis on the fluctuations of the monsoon on various scales and the effects of the Tibetan Plateau on the monsoon Much highly original material and achievements Chinese and Western meteorologists have made from the past 20 years have been incorporated with a unifying approach In each chapter the observational and theoretical including modelling treatment will be closely combined in order to fully illustrate the relevant problems The

unique thermal and dynamical effects of the Tibetan Plateau on the monsoon circulation features which are one of the central problems of the Asian monsoon are highlights of this monograph Researchers in meteorology and weather forecasters should find this book a very useful introduction to monsoons over China not only for its systematic treatment of the subject but also because of its considerable historical information This monograph is equally suitable for graduates or more advanced students in meteorology hydrology and oceanography
