Ridges In Image And Data Analysis:

Ridges in Image and Data Analysis David Eberly, 1996-09-30 The concept of ridges has appeared numerous times in the image processing literature. Sometimes the term is used in an intuitive sense. Other times a concrete definition is provided. In almost all cases the concept is used for very specific applications. When analyzing images or data sets it is very natural for a scientist to measure critical behavior by considering maxima or minima of the data. These critical points are relatively easy to compute. Numerical packages always provide support for root finding or optimization whether it be through bisection, Newton's method, conjugate gradient method or other standard methods. It has not been natural for scientists to consider critical behavior in a higher order sense. The concept of ridge as a manifold of critical points is a natural extension of the concept of local maximum as an isolated critical point. However, almost no attention has been given to formalizing the concept. There is a need for a formal development. There is a need for understanding the computation issues that arise in the implementations. The purpose of this book is to address both needs by providing a formal mathematical foundation and a computational framework for ridges. The intended audience for this book includes anyone interested in exploring the usefulness of ridges in data analysis. Pattern Recognition and Data Mining Sameer Singh, Maneesha Singh, Chid Apte, Petra Perner, 2005-09-16

This LNCS volume contains the papers presented at the 3rd International Conference on Advances in Pattern Recognition ICAPR 2005 organized in August 2005 in the beautiful city of Bath, UK. **Scale Space and Variational Methods in**

This book constitutes the refereed proceedings of the Third International Conference on Scale Space and Morphology in Computer Vision Scale Space 2001 held in Vancouver, Canada, in July 2001. The 18 revised full papers presented together with 23 posters were carefully reviewed and selected from 60 submissions. The book addresses all current aspects of scale space and morphology in the context of computer vision in particular: vector distance functions, optic flow, image registration, curve evolution, morphological segmentation, scalar images, vector images, automatic scale selection, geometric diffusion, diffusion filtering, image filtering, inverse problems, active contours, etc. Advanced Concepts for Intelligent Vision Systems Jacques Blanc-Talon, Rudi Penne, Wilfried Philips, Dan Popescu, Paul Scheunders, 2017-11-22 This book constitutes the refereed proceedings of the 18th International Conference on Advanced Concepts for Intelligent Vision Systems ACIVS 2017 held in Antwerp, Belgium, in September 2017. The 63 full papers presented in this volume were carefully selected from 134 submissions. They deal with human computer interaction, classification and recognition, navigation, mapping, robotics, and

transports video processing and retrieval security forensics surveillance and image processing New Developments in the Visualization and Processing of Tensor Fields David H. Laidlaw, Anna Vilanova, 2012-09-14 Bringing together key researchers in disciplines ranging from visualization and image processing to applications in structural mechanics fluid dynamics elastography and numerical mathematics the workshop that generated this edited volume was the third in the successful Dagstuhl series Its aim reflected in the quality and relevance of the papers presented was to foster collaboration and fresh lines of inquiry in the analysis and visualization of tensor fields which offer a concise model for numerous physical phenomena Despite their utility there remains a dearth of methods for studying all but the simplest ones a shortage the workshops aim to address Documenting the latest progress and open research questions in tensor field analysis the chapters reflect the excitement and inspiration generated by this latest Dagstuhl workshop held in July 2009 The topics they address range from applications of the analysis of tensor fields to purer research into their mathematical and analytical properties They show how cooperation and the sharing of ideas and data between those engaged in pure and applied research can open new vistas in the study of tensor fields **Scale-Space Theories in Computer Vision** Mads Nielsen, Peter Johansen, Ole F. volume gives an overview of research done by CCI faculty in the area of Information Intelligent Systems Presented papers focus on recent advances in four major directions Complex Systems Knowledge Management Knowledge Discovery and Visualization A major reason for producing this book was to demonstrate a new important thrust in academic research where college wide interdisciplinary efforts are brought to bear on large general and important problems As shown in the research described here these efforts need not be formally organized joint undertakings through parts could be but are rather a convergence of interests around grand themes

Topology-Based Methods in Visualization II Hans-Christian Hege, Konrad Polthier, Gerik Scheuermann, 2009-02-07 Visualization research aims to provide insight into large complicated data sets and the phenomena behind them While there are different methods of reaching this goal topological methods stand out for their solid mathematical foundation which guides the algorithmic analysis and its presentation Topology based methods in visualization have been around since the beginning of visualization as a scientific discipline but they initially played only a minor role In recent years interest in topology based visualization has grown and significant innovation has led to new concepts and successful applications The latest trends adapt basic topological concepts to precisely express user interests in topological properties of the data This book is the outcome of the second workshop on Topological Methods in Visualization which was held March 4-6 2007 in Kloster Nimbschen near Leipzig Germany

The workshop brought together more than 40 international researchers to present and discuss the state of the art and new trends in the field of topology based visualization Two inspiring invited talks by George Haller MIT and Nelson Max LLNL were accompanied by 14 presentations by participants and two panel discussions on current and future trends in visualization research This book contains thirteen research papers that have been peer reviewed in a two stage review process In the first phase submitted papers were peer reviewed by the international program committee After the workshop accepted papers went through a revision and a second review process taking into account comments from the first round and discussions at the workshop About half the papers concern topology based analysis and visualization of fluid flows simulations two papers concern more general topological algorithms while the remaining papers discuss topology based visualization methods in application areas like biology medical imaging and electromagnetism
