Deception In The Marketplace David M. Boush,Marian Friestad,Peter Wright,2015-12-22 This is the first scholarly book to fully address the topics of the psychology of deceptive persuasion in the marketplace and consumer self protection Deception permeates the American marketplace Deceptive marketing harms consumers health welfare and financial resources reduces people s privacy and self esteem and ultimately undermines trust in society Individual consumers must try to protect themselves from marketers misleading communications by acquiring personal marketplace deception protection skills that go beyond reliance on legal or regulatory protections Understanding the psychology of deceptive persuasion and consumer self protection should be a central goal for future consumer behavior research The authors explore these questions What makes persuasive communications misleading and deceptive How do marketing managers decide to prevent or practice deception in planning their campaigns What skills must consumers acquire to effectively cope with marketers deception tactics What does research tell us about how people detect neutralize and resist misleading persuasion attempts What does research suggest about how to teach marketplace deception protection skills to adolescents and adults Chapters cover theoretical perspectives on deceptive persuasion different types of deception tactics how deception minded marketers think prior research on how people cope with deceptiveness the nature of marketplace deception protection skills how people develop deception protection skills in adolescence and adulthood prior research on teaching consumers marketplace deception protection skills and societal issues such as regulatory frontiers

societal trust and consumer education practices This unique book is intended for scholars and researchers It should be essential reading for upper level and graduate courses in consumer behavior social psychology communication and marketing Marketing practitioners and marketplace regulators will find it stimulating and authoritative as will social scientists and educators who are concerned with consumer welfare Dieppe Revisited John P. Campbell, 2013-10-23 This book reappraises the ill fated raid named operation Jubilee focusing on aspects such as naval and air operations in the Channel signals radar intelligence agents and deception It draws from official archives both German and Allied From these voluminous but fragmented records many of which have been destroyed classified or lost the book aims to thread the evidence together **Hot Talk, Cold Science** S. Fred Singer, David R. Legates, Anthony R. Lupo, 2021-01-18 The revised and expanded third edition of Hot Talk Cold Science forms the capstone of the distinguished astrophysicist Dr S Fred Singer's lucid yet hard scientific look at climate change And the book is no less explosive than its predecessors and certainly never more timely Singer explores the inaccuracies in historical climate data and the failures of climate models as well as the impact of solar variability clouds ocean currents and sea levels on global climate plus factors that could mitigate any human impact on world climate Singer's masterful analysis decisively shows that the pessimistic and often alarming global warming scenarios depicted in the media have no scientific basis In fact he finds that many aspects of increased levels of CO2 as well as any modest warming such as a longer growing season for food and a reduced need to use fossil fuels for heating would have a highly positive impact on the human race As alarmists clamor to impose draconian government restrictions on entire populations in order to combat climate change this book reveals some other startling stubborn contradictory facts including CO2 has not caused temperatures or sea levels to rise beyond historical rates Severe storms have not increased in frequency or intensity since 1970 neither have heat waves nor droughts Global climate change is not harming coral reefs Any increases in CO2 concentrations across huge time spans haven't preceded rising global temperatures they've followed them by about 600 to 800 years just the opposite of alarmist claims Carbon taxes and other solutions to the global warming crisis would have severe consequences for economically disadvantaged groups and nations Alarmist climate scientists have hidden their raw temperature data and deleted emails then undermined the peer review system to squelch debate In sum despite all the hot talk and outright duplicity there is no climate crisis resulting from human activities and no such threat on the horizon
