Moving Target:

Optimal Search for Moving Targets Lawrence D. Stone, Johannes O. Royset, Alan R. Washburn, 2016-04-06 This book begins with a review of basic results in optimal search for a stationary target It then develops the theory of optimal search for a moving target providing algorithms for computing optimal plans and examples of their use Next it develops methods for computing optimal search plans involving multiple targets and multiple searchers with realistic operational constraints on search movement These results assume that the target does not react to the search In the final chapter there is a brief overview of mostly military problems where the target tries to avoid being found as well as rescue or rendezvous problems where the target and the searcher cooperate Larry Stone wrote his definitive book *Theory of Optimal Search* in 1975 dealing almost exclusively with the stationary target search problem Since then the theory has advanced to encompass search for targets that move even as the search proceeds and computers have developed sufficient capability to employ the improved theory In this book Stone joins Royset and Washburn to document and explain this expanded theory of search The problem of how to search for moving targets arises every day in military rescue law enforcement and border patrol operations **An**

Airborne Radar Technique for Moving-target Detection, Location, and Tracking John K. Schindler, 1973 A novel technique for detecting locating and tracking moving targets from an airborne radar platform is described and analyzed The technique uses the generally dissimilar linear doppler frequency modulated signals from moving targets and stationary ground clutter A matched filter processor is defined and its resolution and ambiguity properties studied as function processor parameters Sub clutter visibility of the processor is then determined Two techniques for digitally implementing the processor are discussed and the computational efficiencies briefly analyzed Finally target angular position can be determined using phase monopulse It is then shown that target velocity both ground speed and target heading can be determined from radar observables Author [Study on Ground Moving Target Indication and Imaging Technique of Airborne SAR](#) Jian
