Network Algorithmics George Varghese, 2005 In designing a network device you make dozens of decisions that affect the speed with which it will perform sometimes for better but sometimes for worse Network Algorithmics provides a complete coherent methodology for maximizing speed while meeting your other design goals Author George Varghese begins by laying out the implementation bottlenecks that are most often encountered at four disparate levels of implementation protocol OS hardware and architecture He then derives 15 solid principles ranging from the commonly recognized to the groundbreaking that are key to breaking these bottlenecks The rest of the book is devoted to a systematic application of these principles to bottlenecks found specifically in endnodes interconnect devices and specialty functions such as security and measurement that can be located anywhere along the network This immensely practical clearly presented information will benefit anyone involved with network implementation as well as students who have made this work their goal

Routing, Flow, and Capacity Design in Communication and Computer Networks Michal Pioro, Deep Medhi, 2004-07-21 In network design the gap between theory and practice is woefully broad This book narrows it comprehensively and critically examining current network design models and methods You will learn where mathematical modeling and algorithmic optimization have been under utilized At the opposite extreme you will learn where they tend to fail to contribute to the twin goals of network efficiency and cost savings Most of all you will learn precisely how to tailor theoretical models to make them as useful as possible in practice Throughout the authors focus on the traffic demands encountered in the real world of network design Their generic approach however allows problem formulations and solutions to be applied across the board to virtually any type of backbone communication or computer network For beginners this book

is an excellent introduction For seasoned professionals it provides immediate solutions and a strong foundation for further advances in the use of mathematical modeling for network design Written by leading researchers with a combined 40 years of industrial and academic network design experience Considers the development of design models for different technologies including TCP IP IDN MPLS ATM SONET SDH and WDM Discusses recent topics such as shortest path routing and fair bandwidth assignment in IP MPLS networks Addresses proper multi layer modeling across network layers using different technologies for example IP over ATM over SONET IP over WDM and IDN over SONET Covers restoration oriented design methods that allow recovery from failures of large capacity transport links and transit nodes Presents at the end of each chapter exercises useful to both students and practitioners
