Mt St Helens The Toutle Valley The Early Years:

In the Path of Destruction Richard Waitt, 2020-10-14 A napping volcano blinked awake in March 1980 Two months later when that mountain roared Jim Scymanky was about twelve miles northwest logging a north slope above Hoffstadt Creek Rocks zinged through the woods bouncing off trees then the tops of trees snapped off Suddenly I could see nothing it got hot right away then scorching hot and impossible to breathe The air had no oxygen like being trapped underwater I was being cremated the pain unbearable Steve Malone at the University of Washington Seismology Laboratory was inconsolable We d failed For two months we d counted and located thousands of earthquakes looked for changes to anticipate an eruption Then it just happened It killed many people It killed David Johnston We could hardly work Author Richard Waitt was part of a U S Geological Survey team doing volcano research in the Cascades and was one of the first to arrive following the mountain s early rumblings His journey collecting eyewitness accounts began with a conversation in a bar the third week after Mount St Helens erupted The couple he met barely outraced a searing ash cloud and Waitt realized their experiences could inform geologic studies He eventually conducted hundreds of interviews sometimes two and three decades later often making multiple visits to gather additional details correct errors and resolve discrepancies A meticulous scientist with intimate knowledge of Mount St Helens Waitt delivers a detailed and accurate chronicle of events He tapped numerous primary sources interviews legal depositions personal diaries geologists field notes radio logs and police records Newspaper stories and even sun shadows on photographs revealed additional intricacies In the Path of Destruction s eruption story unfolds through unforgettable riveting narratives the heart of a masterful chronology that also delivers engrossing science history and journalism *Mount St. Helens Feasibility Report, Toutle, Cowlitz, Columbia Rivers*, 1985 **Mt. Ecological Responses at Mount St. Helens: Revisited 35 years after the 1980 Eruption Charles M. Crisafulli, Virginia H. Dale, 2018-01-30 This book builds on existing work exploring succession disturbance ecology and the interface between geophysical and biological systems in the aftermath of the 1980 eruptions of Mount St Helens The eruption was dramatic both in the spatial extent of impacts and the range of volcanic disturbance types and intensities Complex geophysical forces created unparalleled opportunities to study initial ecological responses and long term succession processes that occur in response to a major contemporary eruption across a great diversity of ecosystems lowland to alpine forests meadows lakes streams and rivers These factors make Mount St Helens an extremely rich environment for learning about the ecology of volcanic areas and more generally about ecosystem response to major disturbance of many types including land management Lessons about ecological recovery at Mount St Helens are shaping thought about succession disturbance ecology ecosystem management and landscape ecology In the first five years after the eruption several syntheses

documented the numerous intensive studies of ecological recovery The 2005 volume Ecological Responses to the 1980 Eruption of Mount St Helens Springer Publishing was the first ecological synthesis since 1987 of the scores of ecological studies underway in the area More than half of the world s published studies on plant and animal responses to volcanic eruptions have taken place at Mount St Helens The 25 year synthesis which generally included investigations i e data from 1980 2000 made it possible to more thoroughly analyze initial stages of ecological responses and to test the validity of early interpretations and the duration of early phenomena And 35 years after the eruption it is time for many of the scientists working in the first three decade post eruption period to pass the science baton to the next generation of scientists to work at Mount St Helens and a synt hesis a t this time of transfer of responsibility to a younger cohort of scientists will be an enormous asset to the continuation of work at the volcano
