Behavioral Aspects of Neuroendocrinology Detlev Ganten, Donald Pfaff, 2012-12-06 Latest issue in the CURRENT TOPICS IN NEUROENDOCRINOLOGY series which has been gaining a great deal of reputation as a primary source for reviews in neuroendocrinology and related areas in the past few years

Recombinant DNA Technologies in Neuroendocrinology Hiroo Imura, 2012-12-06 This volume covers new aspects and future directions in molecular neuroendocrinology an important and rapidly growing area in neuroendocrinology Among the various neurotransmitters or neuromodulators that play an important role in the control of endocrine functions neuropeptides and related proteins have drawn special attention because of their diversity and complexity in action More recently molecular biology has become an essential tool of research in this area Various genes encoding neuropeptides and other related proteins have been cloned and the regulation of expression of these genes has been studied extensively Transgenic animals have been used in studying the function of the gene in question In situ hybridization is being applied to localize the site of production and analyze the regulation of production of peptides or proteins

Handbook of Psychopharmacology Leslie L. Iversen, Susan D. Iversen, Solomon H. Snyder, 2013-11-11 Psychopharmacology of the Aging Nervous System was selected as the topic for Volume 20 of the Handbook of Psychopharmacology Senile dementia is now widely recognized as a medical and social problem likely to reach epidemic proportions by the turn of the century By that time it is estimated that almost 20% of the population in most developed countries will be over the age of 65 and at a conservative estimate 1 in 10 of them will suffer from a dementing illness Many symposia have appeared over the last few years describing the neuropathological and neurochemical deficiencies in Alzheimer's and other forms of dementia the neuropsychological features of the disease and attempts to treat it In this volume we have selected topics and authors who are beginning to question some of the earlier assumptions and to ask different questions about dementia In the first four chapters the neuropathology and neurochemistry of dementia are reevaluated It is important to understand the relationship between the formation of amyloid plaques and neurofibrillary tangles the progressive degeneration in cortex and the neurochemical deafferentation of cortex In particular the possibility is considered that the most severe pathology is seen in a well defined limbic cortical circuitry known to be involved in mnemonic processing The growing interest in the genetic determinants of familial Alzheimer's is reviewed It is also recognized that detailed comparisons of the neural and psychological characteristics of the various degenerative diseases that impair cognitive processing may be valuable

Central Neural Mechanisms in Cardiovascular Regulation

KUNOS,CIRIELLO,2012-12-06 High blood pressure disease is one of the most prevalent pathological conditions in modern society with potentially serious consequences During the last two decades major progress has been made in the development of rational approaches to the treatment of high blood pressure A key factor in this progress has been an increase in our understanding of how the brain controls blood pressure The chapters in the present book together with those in a previous volume provide a broad overview of recent progress in our knowledge of the central neural mechanisms involved in the regulation of the cardiovascular system It is our hope that these essays by leading experts in the field will not only provide a useful source of information but will also stimulate inquiry leading to new discoveries in this critically important field of research George Kunos John Ciriello vii List of Contributors Jeffrey J Anderson Department of Pharmacology and Toxicology Indiana University School of Medicine Indianapolis Indiana 46208 USA Katsuyuki Ando Fourth Department of Internal Medicine University of Tokyo School of Medicine Tokyo 112 Japan Jaideep S Bains Department of Physiology Queen's University Kingston Ontario Canada K7L 3N6 Kathleen H Berecek Department of Physiology and Biophysics and the Vascular Biology and Hypertension Program The University of Alabama at Birmingham Birmingham Alabama 35294 USA Vernon S Bishop Department of Physiology The University of Texas Health Science Center San Antonio Texas 78284 7756 USA P A

Neuroendocrine Function Daniela Jezová, John C. Porter, 2013-04-09 During the past several decades much research effort has gone into the elucidation of the role of neuroendocrine systems as secretory and metabolic regulators of cells of a variety of organs and structures including the testes ovaries adrenals thyroid pituitary gland and mammary glands However the role of cells comprising such organs and structures in the modulation of neuroendocrine processes has received considerably less is generally less well appreciated attention and Nonetheless it is important that we understand the actions on neuroendocrine systems of substances that reach the brain by way of the vasculature including hormones cytokines toxins amino acids drugs and similar agents In order to analyze the present state of knowledge on this topic experimental scientists and clinicians whose shared interests include actions of circulating agents on the brain met at a satellite symposium of the XXXI International Congress of Physiological Sciences This symposium entitled Circulating Regulatory Factors and Neuroendocrine Function was held in Smolenice Castle Czechoslovakia June 26 July 1 1989 and reviews delivered at this symposium as invited presentations are published in this volume Presentations given as free communications have been published separately and are available in *Endocrinologia Experimentalis* 24 1 273 1990

Stimulus-Secretion Coupling in Neuroendocrine Systems Brian Pickering, Detlev Ganten, Donald Pfaff, 2012-12-06 The role of electrical signalling in the control of endocrine secretions by the brain has been clear for many years Recently the influences of hormones on synthetic events in neuroendocrine cells have raised new questions concerning the peptides released from such neurons This volume concentrates on the relation between these two fields and asks how

electrical action potentials facilitate secretion of substances from nerve cells which control endocrine events While stimulus secretion coupling has been studied extensively in other physiological contexts this is the first treatment of the phenomenon in an exclusively neuroendocrine setting **Affective Neuroscience** Jaak Panksepp, 2004-09-30 This comprehensive text on the fundamental brain sources of human and animal feelings summarizes up to date information about the subcortical operating systems that organize the fundamental emotional tendencies of all mammals Complex material is presented in a comprehensive but readable manner The book approaches emotions from the perspective of basic emotion theory but does not fail to address the more complex issues raised by constructionist approaches including relations to human consciousness Representing a synthetic integration of vast amounts of neurobehavioral knowledge this book may be the most important contribution to understanding the biology of emotions since Darwin's Expression of Emotions in Man and Animals Throughout the psychiatric implications of this type of knowledge are also addressed Brain Neurosecretory Cytokines Armen A. Galoyan, 2012-12-06 From the reviews Brain Neurosecretory Cytokines is an excellent book a veritable goldmine of information at the cutting edge of neuroscience It should stimulate ideas for future directions in neuroscience for years to come This volume should be highly useful for medical libraries neuroscientists endocrinologists and graduate students in these fields Arthur S Brecher TRENDS in Endocrinology Metabolism Vol 16 6 2005
