

What Are Peatlands?

Peatlands are a type of wetland found in many parts of the world.

Partially decomposed plant material (peat)

Water-saturated vegetation

Standing water

Although peatlands may look very different depending on their location, they all have a layer of (often thick) peat, which is formed and conserved by persistent saturation with water, which causes oxygen-free conditions.

Hans Joosten

Peatlands And Environmental Change:

Peatlands and Environmental Change Dan Charman, 2002-11-22 *Peatlands and Environmental Change* provides a comprehensive summary of peatland science. The emphasis is on peatlands as dynamic parts of the landscape that are undergoing constant change as a result of processes of peat accumulation and development as well as through human activity and climatic variability. The book is divided into four parts that look in turn at the nature of peatland classification and terminology, hydrological and ecological processes and peatland growth changes in peatlands and their influence on the environment and resource management issues. Each chapter is supported by examples from all the main peatland regions and site types including New Zealand, Australia and the tropics as well as Europe and North America. *Peatlands and Environmental Change* is an ideal introduction to peatlands for those developing an understanding of these ecosystems and for specialists who wish to broaden their knowledge.

Peatlands, climate change mitigation and biodiversity conservation Hans Joosten, 2015-04-27 Did you know that peatlands hold more carbon than all forests of the world combined? Drained peatlands are responsible for 25% of total CO₂ emissions in the Nordic and Baltic countries. Rewetting of peatlands substantially reduces these emissions. This policy brief pleads for increased commitments to conserving and rewetting peatlands, for abolishing regulations that drive peatland drainage, for changing drained peatland use to paludiculture, and for setting up good practice demonstration projects. It stresses the need for better communicating the benefits of wet peatlands and the costs arising from damaged ones. Finally, it highlights the role of peatland rewetting and restoration in reaching national and international policy targets for climate change mitigation, water quality improvement and biodiversity conservation.

Peatlands and Climate Change Maria Strack, 2008 The International Peat Society (IPS) established a joint IPS Working Group on Peatlands and Climate Change in the end of the year 2005. The Working Group's task was to compile information into a summary of available knowledge to help the IPS and other actors to understand the role of peatlands and peat within the current context of global climate change.

Authoritative reviews and focused case studies on the history and future of the fauna and flora of Southeast Asia. **Drivers of Environmental Change in Uplands** Aletta Bonn, Tim Allott, Klaus Hubacek, Jon Stewart, 2009-01-13 The uplands are a

crucial source of ecosystem services such as water provision carbon retention maintenance of biodiversity provision of recreation value and cultural heritage This puts them in the focus of both environmental and social scientists as well as practitioners and land managers This volume brings together a wealth of knowledge of the British uplands from diverse but interrelated fields of study clearly demonstrating their importance in 21st Century Britain and indicating how we may through interdisciplinary approaches meet the challenges provided by past and future drivers of environmental change The upland environments are subject to change They face imminent threats as well as opportunities from pressures such as climate change changes in land management and related changes in fire risk increases in erosion and water colour degradation of habitats altered wildlife and recreational value as well as significant changes in the economy of these marginal areas This book presents up to date scientific background information addresses policy related issues and lays out pressing land management questions A number of world class experts provide a review of cutting edge natural and social science and an assessment of past current and potential future management strategies policies and other drivers of change After appraisal of key concepts and principles chapters provide specific examples and applications by focussing on UK upland areas and specifically the Peak District National Park as a key example for other highly valuable upland regions

Available online <https://pub.norden.org/temanord2021/510> We are facing two global environmental crises: the loss of biodiversity and climate change. Both crises should be handled within the forthcoming decades. Actions implemented to mitigate one challenge should not worsen the other. The two crises are interlinked. Biodiversity, together with geophysical and climatic factors, forms and maintains ecosystems which contribute to climate change mitigation by capturing CO₂ and storing carbon. But the current climate change worsens the negative impact of the main drivers causing biodiversity loss. This leads to further degradation of ecosystems which in turn may weaken the functionality of ecosystems that reduce the ability of nature to capture and store carbon. The project identified eight cases related to nature-based solutions enacted in the Nordic countries and identifies synergies between biodiversity conservation and climate change mitigation.

Peatlands I.P. Martini, A. Martinez Cortizas, W. Chesworth, 2007-03-28. In the past two decades there has been considerable work on global climatic change and its effect on the ecosphere as well as on local and global environmental changes triggered by human activities. From the tropics to the Arctic, peatlands have developed under various geological conditions and they provide good records of global and local changes since the Late Pleistocene. The objectives of the book are to analyze topics such as geological evolution of major peatlands basins, peatlands as self-sustaining ecosystems, chemical environment of peatlands, water and peat chemistry, peatlands as archives of environmental changes, influence of peatlands on atmosphere, circular complex interactions, remote sensing studies of peatlands, peatlands as a resource, peatlands degradation, restoration, plus more. Presents an interdisciplinary approach with an emphasis on Earth Science and addresses the need for integration between subdisciplines and the developing of new approaches. Synthesizes the evolutionary, ecological, and chemical characteristics of major peatlands as well as focuses on the environmental changes from climate changes to surface area changes due to human activities. Covers topical studies of worldwide interest and provides examples from many different countries.

Climate Change Research, Policy and Actions in Indonesia Riyanti Djalante, Joni Jupesta, Edvin Aldrian, 2020-10-06. This edited volume reviews the latest advances in policies and actions in understanding the science, impacts, and management of climate change in Indonesia. Indonesia is one of the most vulnerable countries to climate change due to its geographical, physical, and social-economic situations. There are many initiatives to understand and deal with the impacts in the country. The national government has issued key guiding policies for climate change. International agencies together with local stakeholders are working on strengthening the capacity in the policy formulations and implementing actions to build community resilience. Universities are conducting research on climate change related at different scales. Cities and local governments are implementing innovations in adapting to the impacts of climate change and transitioning toward green economy. This book summarizes and discusses the state of the art regarding climate change in Indonesia, including adaptation and mitigation measures. The primary readership of the book includes policy makers, scientists, and practitioners of climate change actions in Indonesia and other countries facing similar challenges.
