Charged Particle and Photon Interactions with Matter A. Mozumder, Yoshihiko Hatano, 2003-11-14 Charged Particle and Photon Interactions with Matter offers in depth perspectives on phenomena of ionization and excitation induced by charged particle and photon interactions with matter in vivo and in vitro This reference probes concepts not only in radiation and photochemistry but also in radiation physics radiation biochemistry and radiatio Bitumens in Ore Deposits John Parnell, Henryk Kucha, P. Landais, 2012-12-06 This volume covers the occurrence interpretation and significance of bitumens hydrocarbon residues in ore deposits Bitumens occur with a wide variety of ores including deposits of base metals mercury uranium gold and other precious metals. The papers included reflect this variety of bitumen occurrences and the potential for obtaining useful data from them The contributions are written by acknowledged experts in this field who cover analytical techniques and case studies using diverse petrographic and geochemical approaches which will give ore geologists and geochemists an excellent insight into the interpretation of bitumens during mineral exploration. The large number of plates in particular will help the non specialist to make good use of the volume through the application to new deposits This is the most comprehensive set of contributions published on a subject of growing interest at a time when explorationists are increasingly recognising the occurrence of bitumens in ore deposits and the fact that the evolution of mineralising fluids and Structure and Dynamics of Solutions Hidevuki Ohtaki, H. hydrocarbon fluids may be closely interlinked Yamatera, 2013-10-22 Recent advances in the study of structural and dynamic properties of solutions have provided a molecular picture of solute solvent interactions Although the study of thermodynamic as well as electronic properties of solutions have played a role in the development of research on the rate and mechanism of chemical reactions such macroscopic and microscopic properties are insufficient for a deeper understanding of fast chemical and biological reactions In order to fill the gap between the two extremes it is necessary to know how molecules are arranged in solution and how they change their positions in both the short and long range This book has been designed to meet these criteria It is possible to develop a sound microscopic picture for reaction dynamics in solution without molecular level knowledge of how reacting ionic or neutral species are solvated and how rapidly the molecular environment is changing with time A variety of actual examples is given as to how and when modern molecular approaches can be used to solve specific solution problems The following tools are discussed x ray and neutron diffraction EXAFS and XANES molecular dynamics and Monte Carlo computer simulations Raman infrared NMR fluorescence and photoelectron emission spectroscopic methods conductance and viscosity measurements high pressure techniques and statistical mechanics methods Static and dynamic properties of ionic solvation molecular solvation ion pair formation ligand exchange reactions and typical organic solvents are useful for bridging the gap between classical thermodynamic studies and modern single molecule studies in the gas phase The book will be of interest to solution physical inorganic analytical and structural chemists as well as to chemical kineticists

Artificial Intelligence in Chemistry Z. Hippe, 2013-10-22 This comprehensive overview of the application of artificial intelligence methods AI in chemistry contains an in depth summary of the most interesting achievements of modern AI namely problem solving in molecular structure elucidation and in syntheses design The book provides a brief history of AI as a branch of computer science It also gives an overview of the basic methods employed for searching the solution space thoroughly exemplified by chemical problems together with a profound and expert discussion on many questions that may be raised by modern chemists wishing to apply computer assisted methods in their own research Moreover it includes a survey of the most important literature references covering all essential research in automated interpretation of molecular spectra to elucidate a structure and in syntheses design A glossary of basic terms from computer technology for chemists is appended This book is intended to make the emerging field of artificial intelligence understandable and accessible for chemists who are not trained in computer methods for solving chemical problems The author discusses step by step basic algorithms for structure elucidation and many aspects of the automated design of organic syntheses in order to integrate this fascinating technology into current chemical knowledge The Chemical Physics of Solvation Revaz R. Dogonadze, 1985 The importance of solvation as a concept which covers quite generally the interactions between a molecular solute particle and a macroscopic body of surrounding solvent is well recognized Solvation plays a major role in the distribution of elements in the geo and hydrosphere and most chemical and biological processes involve solvated reactants and products the electronic and molecular structure of which are strongly determined by solvation This three volume monograph has been written collectively by 50 authors from 14 countries who are specialists in different areas of solvation science Part A deals with the theory of solvation Part B is entirely devoted to spectroscopy of solvation and Part C covers solvation phenomena in specific physical chemical and biological systems The volumes will be an invaluable reference source for physicists physical chemists and biophysicists undertaking investigations into the diversified and fascinating areas of the physics and chemical physics of solvation at postgraduate and professional research levels Radiation Chemistry of Hydrocarbons Gábor Földiák, 1981
