

Health Hazards of *Electromagnetic Radiation*

We are under continual attack from electromagnetic fields (EMFs) radiating from power lines, household wiring, microwave ovens, computers, televisions, clock radios, cellular phones, electric blankets and other appliances. Researchers have correlated electropollution with increases in cancer, birth defects, depression, learning disabilities, Chronic Fatigue Syndrome, Alzheimer's disease, and Sudden Infant Death Syndrome. The danger is real and with increasing use of electricity in our environment it is one of the reasons why many scientists believe some disease rates are on the rise.

EMFs are not blocked or weakened by the trees, walls, buildings, or other structures. Like X-rays, they pass through these objects and into our bodies—disrupting normal cellular function and biological processes.

Our greatest exposure to EMFs comes from within our homes and offices. All household and office appliances emit EMFs. But you cannot tell which are most dangerous by their size or function. Often the small devices like electric can openers and hair dryers are much more dangerous than the larger ones such as electric ovens or refrigerators.

In this book you will find out—

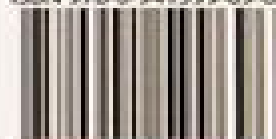

- About the dangers you face with EMF exposure
- Why certain diseases persist in spite of medical treatment
- How to reduce exposure from computer and TV screens
- If microwave ovens are safe or not
- What home appliances are the most dangerous
- Where we get the most exposure
- How to find hidden EMF "hot spots" in the home

This book offers practical ways to protect yourself in your home and office from the effects of electromagnetic radiation. You will learn how to take simple precautionary steps to reduce EMF exposure by as much as 90 percent and virtually eliminate the threat of electropollution on your health. If you use electricity, you need this book!

Personal Protective Equipment for Chemical, Biological, and Radiological Hazards Eva F. Gudgin Dickson, 2012-09-25. Personal protective equipment (PPE) is critical for those dealing with toxic, infectious, and radioactive materials. An easily accessible guide for professionals and researchers in all PPE fields, this book takes a fresh look at how PPE is designed, selected, and used in today's emergency response environment where users may need to be protected against deliberately used chemical, biological, or radiological agents in terrorism or warfare scenarios, as well as more traditional hazards. Covering the physics, chemistry, and physiology of these hazards, the book explains how PPE protects from various forms of hazards, as well as how to use this information to select PPE against these highly hazardous substances for first responder or military users. The design of PPE and components, plus relevant performance and evaluation standards, are also discussed.

Lees' Loss Prevention in the Process Industries Frank Lees, 2005-01-25. Over the last three decades, the process industries have grown very rapidly, with corresponding increases in the quantities of hazardous materials in process, storage, or transport. Plants have become larger and are often situated in or close to densely populated areas. Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough, Bhopal, Chernobyl, Three Mile Island, the Phillips 66 incident, and Piper Alpha, to name but a few. The field of Loss Prevention is and continues to be of supreme importance to countless companies, municipalities, and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas, thus increasing the hazard of loss of life or property. This book is a detailed guidebook to defending against these and many other hazards. It could, without exaggeration, be referred to as the bible for the process industries. This is THE standard reference work for chemical and process engineering safety professionals. For years, it has been the most complete collection of information on the theory, practice, design, elements, equipment, regulations, and laws covering the field of process safety. An entire library of alternative books and cross-referencing systems would be needed to replace or improve upon it, but everything of importance to safety professionals, engineers, and managers can be

found in this all encompassing reference instead Frank Lees world renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world s chief experts in this field Sam Mannan is professor of chemical engineering at Texas A principles practice codes standards data and references needed by those practicing in the field **Radioactive Waste Processing and Disposal** ,1958 **Nuclear Science Abstracts** ,1974 National Library of Medicine Catalog National Library of Medicine (U.S.),1966 **Fundamentals of Nuclear Science and Engineering Third Edition** J.
