Congress,1977 Instrumentation and Techniques for Radio Astronomy Paul F. Goldsmith,1988 Hubble Space Telescope And The High Redshift Universe, The - Proceedings Of The 37th Herstmonceux Conference Nial R Tanvir,Alfonso Aragon-salamanca,Jasper V Wall,1997-05-03 Since the successful refurbishment mission the Hubble Space Telescope has made dramatic and exciting progress in unravelling the nature of sources at high redshift The upcoming installation of the next generation of instruments will give further impetus to the field particularly in the infrared spectral region The proceedings of this landmark meeting review the results of the first three years of post repair data including the deepest astronomical images ever obtained the Hubble Deep Field This was the first presentation of these exciting results at a major international conference The interface between HST and ground based facilities and planned programmes with forthcoming HST instruments are also extensively discussed Cold Gas at High Redshift M.N. Bremer,P.P. van der Werf,H.J.A. Röttgering,C.L. Carilli,2012-12-06 Recent years have seen increasing evidence that the main epoch of galaxy formation in the universe may be directly accessible to observation Angular fluctuations in the background relict radiation have been detected by various ground based instruments as well as by the COBE satellite and suggest that the epoch of galaxy formation was not so very early Combined optical and radio studies have found galaxies at redshifts above 2.0 systems that at least superficially show the characteristics expected of large galaxies seen only shortly after their formation And absorption lines in the spectra of quasars seem to be telling us that most cold gas at early to intermediate cosmological epochs was in clouds having roughly galaxy sized masses What kinds of new observations will best help us study this high redshift universe in future What new instruments will be needed These are questions that loom large in the minds of the Dutch astronomical community as we celebrate 25 years of operation of the Westerbork Synthesis Radio Telescope Celebration of this Silver Jubilee has included a birthday party on 23 June 1995 a commemorative volume looking at both the history and the future of the facility The Westerbork Observatory Continuing Adventure in Radio Astronomy Kluwer 1996 and an international workshop held in the village of Hogeveen on 28-30 August 1995 University of California Union Catalog of Monographs Cataloged by the Nine Campuses from 1963 Through 1967: Authors & titles University of California (System). Subjects University of California (System). Institute of Library Research,University of California, Berkeley,1972 *Physical Processes in Red Giants* I. Iben,Alvio Renzini,2012-12-06 In recent years it has become clear that the red giant phase is one of the most dramatic periods in a star's life when all of its parts become involved in ways that have both direct and indirect observational consequences This is most particularly true of low and intermediate mass stars during the second ascent of the giant branch Such stars bring to their surfaces products of nucleosynthesis currently taking place in their deep interiors they pulsate as Mira variables develop extended outward flowing atmospheres that may exhibit maser properties and shed great quantities of matter sometimes highly processed into the interstellar medium The manner in which processed matter is brought to the surface is far from being completely explained and the precise mechanism or mechanisms whereby matter is ejected from the stellar surface whether by deposition of Alfvén waves radiation pressure on grains or as a consequence of some large scale envelope instability has yet to be elucidated to everyone's satisfaction The purpose of the second workshop in Astrophysics organized by the Advanced School of Astronomy was to bring together experts on all the physical processes occurring in red giants in an effort to emphasize the interrelatedness of these individual processes and to encourage a dialogue among experts that might serve to initiate a synthesis or at least sharpen our understanding of the most important problems to address in the future
