Balner, 2012-12-06 Acute radiation injury in man has been amply reviewed in the past decades 1 8 Information for those reviews was mainly derived from the Hiroshima and Nagasaki experience 3 from radiation accidents as a consequence of testing nuclear weapons and the application of nuclear energy 9 13 and from the intentional irradiation of patients mostly for the treatment of malignancies and or as conditioning for transplantation 14 20 Further a

large body of data derived from animal experimentation has led to cautious extrapolations to the human situation 14 An elaborate review dealing with early somatic effects of radiation in a man was published by UNSCEAR in 1962 2 It was supplemented in 1969 with a similar document dealing mostly with radiation induced chromosome aberrations the effects of radiation on the nervous system and radioactive contamination of the environment by nuclear testing 21 In a more recent UNSCEAR report 1972 the main topics were genetic effects carcinogenesis and effects of radiation on the immune response 22 The early effects of radiation in man were also expertly and comprehensively reviewed in a report by the United States National Research Council in 1967 23 *Nuclear Science Abstracts*, 1974-07 Radiation Protection Criteria and Standards: Their Basis and Use United States.
