Rail Human Factors Nastaran Dadashi, Anita Scott, John R Wilson, Ann Mills, 2013-02-19 The rail human factors ergonomics community has grown quickly and extensively and there is much increased recognition of the

vital importance of ergonomics human factors by rail infrastructure owners rail operating companies system developers regulators and national and trans national government This book the fourth on rail human factors is drawn from papers presented at the London 4th International Conference on Rail Human Factors The contributions cover the range of human and organisational issues on the railway from driving to signalling and control to maintenance and engineering work to passengers and security issues such as trespass and address improvements in safety reliability use of capacity efficiency and quality The book represents the best of recent work in rail human factors and starts to define the framework for the next few years As well as the human factors areas listed above the conference and thus the book are notable for sessions on simulation in rail human factors and on human factors in metro design and operation The book also reflects the increased attention being paid to and developments in understanding all aspects of rail stakeholders behaviour and also the contribution of ergonomics human factors to innovative network control systems which will enhance reliability safety and use of capacity The book will be of interest to a number of groups those working in the rail sector from a human factors point of view the larger rail industry and related bodies generally and in terms of transferrable knowledge to ergonomists and human factors specialists working in other industries

Evaluation of Rail Technology Dr Anjum Naweed, Dr Chris Bearman, Dr Jillian Dorrian, Ms Janette Rose, Professor Drew Dawson, 2013-11-28 Rapid advancements in train control and in cab technologies provide significant opportunities for rail operators to improve efficiency and enhance their operations New technologies often provide elegant solutions to existing problems or new capabilities for the operator However new technologies may also represent a significant form of risk Thus it is important to balance the potential for significant improvement with justifiable concern about how the technology may unpredictably change the nature of the work If a technology is designed and implemented without considering the substantive human factors concerns that technology may lead to unintended consequences that can introduce safety issues and disrupt network performance It is important to note that even a well designed and beneficial technology may be rejected by the users who see it as a threat to their jobs status or working conditions This book discusses the issues surrounding rail technology and introduces a toolkit of human factors evaluation methods The toolkit provides a practical and operationally focused set of methods that can be used by managers considering investing in technology staff charged with implementing a technology and consultants engaged to assist with the design and evaluation process This toolkit can help to ensure that new rail technologies are thoughtfully designed effectively implemented and well received by users so that the significant investment associated with developing rail technologies is not wasted

Human Factors in the U.S. Railroad Industry Thomas G. Human Factors of Future Rail Intelligent Infrastructure Nastaran Dadashi, 2012 The introduction of highly reliable sensors and remote condition monitoring equipment will change the form and functionality of maintenance and engineering systems within many infrastructure sectors Process transport and infrastructure companies are increasingly looking to intelligent infrastructure to increase reliability and decrease costs in the future but such systems will present many new and some old human factor challenges As the first substantial piece of human factors work examining future railway intelligent infrastructure this thesis has an overall goal to establish a human factors knowledge base regarding intelligent infrastructure systems as used in tomorrow s railway but also in many other sectors and industries An in depth interview study with senior railway specialists involved with intelligent infrastructure allowed the development and verification of a framework which explains the functions activities and data processing stages involved The framework includes a consideration of future roles and activities involved with intelligent infrastructure their sequence and the most relevant human factor issues associated with them especially the provision of the right information in the right quantity and form to the right people In a substantial fieldwork study a combination of qualitative and quantitative methods was employed to facilitate an understanding of alarm handling and fault finding in railway electrical control and maintenance control domains These functions had been previously determined to be of immediate relevance to work systems in the future intelligent infrastructure Participants in these studies were real railway operators as it was important to capture users cognition in their work settings Methods used included direct observation debriefs and retrospective protocols and knowledge elicitation Analyses of alarm handling and fault finding within real life work settings facilitated a comprehensive understanding of the use of artefacts alarm and fault initiated activities along with sources of difficulty and coping strategies in these complex work settings The main source of difficulty was found to be information deficiency excessive or insufficient information Each role requires different levels and amounts of information a key to good design of future intelligent infrastructure The findings from the field studies led to hypotheses about the impact of presenting various levels of information on the performance of operators for different stages of alarm handling A laboratory study subsequently confirmed these hypotheses The research findings have led to the development of guidance for developers and the rail

industry to create a more effective railway intelligent infrastructure system and have also enhanced human factors understanding of alarm handling activities in electrical control **Integrating Human Factors in European Railways**
