*Landslide Analysis and Early Warning Systems* Benni Thiebes, 2012-01-21 Recent landslide events demonstrate the need to improve landslide forecasting and early warning capabilities in order to reduce related risks and protect human lives In this thesis local and regional investigations were carried out to analyse landslide characteristics in the Swabian Alb region and to develop prototypic landslide early warning systems In the local study area an extensive hydrological and slope movement monitoring system was installed on a seasonally reactivated landslide body located in Lichtenstein Unterhausen Monitoring data was analysed to assess the influence of rainfall and snow melt on groundwater conditions and the initiation of slope movements The coupled hydrology slope stability model CHASM was applied to detect areas most prone to slope failures and to simulate slope stability using a variety of input data Subsequently CHASM was refined and two web based applications were developed a technical early warning system to constantly simulate slope stability integrating rainfall measurements hydrological monitoring data and weather forecasts and a decision support system allowing for quick calculation of stability for freely selectable slope profiles On the regional scale available landslide inventory data were analysed for their use in evaluation of rainfall thresholds proposed in other studies Adequate landslide events were selected and their triggering rainfall and snow melting conditions were compared to intensity duration and cumulative thresholds Based on the results a regional landslide early warning system was developed and implemented as a webbased application Both the local and the regional landslide early warning systems are part of a holistic and integrative early warning chain developed by the ILEWS project and could easily be transferred to other landslide prone areas

Extended Reality and Serious Games in Medicine Extended Reality in Medicine and Rehabilitation Extended Reality in Industry Extended Reality in Cultural Heritage Extended Reality Tools for Virtual Restauration Extended Reality and Artificial Intelligence in Digital Humanities Extended Reality in Learning and Extended Reality Sense of Presence and Education of Behaviour      A Comparative Analysis of the Technical Efficiency of Rain-fed and Smallholder Irrigation in Ethiopia Makombe, G.,Namara, R.,Hagos, F.,Awulachew, S. B.,Ayana, M.,Bossio, D.,2011-08-02 Agriculture is the most significant contributor to Ethiopia s economy Most of the agricultural production is under rainfed conditions and thus extremely sensitive to rainfall variability Irrigation development including smallholder irrigation is used by the Ethiopian Government to attempt to mitigate the effects of rainfall variability In this study we look at smallholder irrigation modern and traditional irrigation systems A detailed description of the cropping patterns is given The stochastic frontier production function approach is used to estimate technical inefficiency and constraints to production are analyzed Since the traditional system is found to be efficient but on a lower production frontier the study shows that significant gains can be made by raising the frontier of the traditional systems and increasing the efficiency of the modern systems Among the production constraints studied were land preparation soil fertility weed control pests and diseases soil erosion input access and moisture deficiency The most significant constraints on the irrigated systems were input access and moisture deficiency
