UPSC State PSC Pre General Studies Vol 2 Indian World Geography Solved Papers **Temperate and Boreal Rainforests of the World** Dominick A. DellaSala, 2011 Temperate rainforests are biogeographically unique Compared to their tropical counterparts temperate rainforests are rarer and are found disproportionately along coastlines Because most temperate rainforests are marked by the intersection of marine terrestrial and freshwater systems these rich ecotones are among the most productive regions on Earth Globally temperate rainforests store vast amounts of carbon provide habitat for scores of rare and endemic species with ancient affinities and sustain complex food web dynamics In spite of their global significance however protection levels for these ecosystems are far too low to sustain temperate rainforests under a rapidly changing global climate and ever expanding human footprint Therefore a global synthesis is needed to provide the latest ecological science and call attention to the conservation needs of temperate and boreal rainforests A concerted effort to internationalize the plight of the world's temperate and boreal rainforests is underway around the globe this book offers an essential and heretofore missing tool for that effort DellaSala and his contributors tell a compelling story of the importance of temperate and boreal rainforests that includes some surprises e g South Africa Iran Turkey Japan Russia This volume provides a comprehensive reference from which to build a collective vision of their future Tropical Rain Forests of Southeast Asia Isamu Yamada, 1998-01-01 Although global environmental problems created by the disappearance of tropical rain forests are all too well known the forests themselves vast in size and rich in diversity are the least understood of the world's ecosystems This book presents one researcher's view of Southeast Asia's tropical rainforests based on a quarter century of fieldwork in a wide range of forest types Moving from the mangrove of the coastal belt inland through freshwater and peat swamp forests to the lowly dipterocarp forests of the heartlands and up to the montane forests the author's lively account contains a wealth of detailed observations that effectively communicate the complex natural structure of tropical rain forests while providing the reader with candid first impressions mud mosquitoes and all **Encyclopedia of the World's Biomes**, 2020-06-26 Encyclopedia of the World's Biomes is a unique five volume reference that provides a global synthesis of biomes including the latest science All of the book's chapters follow a common thematic order that spans biodiversity importance principal anthropogenic stressors and trends changing climatic conditions and conservation strategies for maintaining biomes in an increasingly human dominated world This work is a one stop shop that gives users access to up to date informative articles that go deeper in content than any currently available publication Offers students and researchers a one stop shop for information currently only available in scattered or non technical sources Authored and edited by top scientists in the field Concisely written to guide the reader though the topic Includes meaningful illustrations and suggests further reading for those needing more specific information **Tropical Rain Forest: A Wider Perspective** F.B. Goldsmith, 2012-12-06 The international perspective for this book is the unprecedented level of concern over deforestation recognized by the meeting of world leaders at the 1992 Earth Summit in Rio de Janeiro and culminating in the appointment of the Intergovernmental

Panel on Forests IPF under the auspices of the UN Commission on Sustainable Development The wide range of issues covered by the authors in this volume reflects the breadth of the international debate from national policies and activist campaigning through economic and social objectives to the sustainable management of forest and soil resources Since the conservation campaigns of the 1980s the focus of international concern has widened from tropical rain forests to all forest formations in all regions with increased recognition of global values and common responsibilities However while forest cover in some temperate countries is increasing irrational deforestation at historically unprecedented levels of damage to biodiversity and to other environmental values remains most acute in tropical countries where the need to use the natural resources for sustainable development is greatest and the capability weakest While accepting the urgency of the situation and the need for greater coherence of action at a global level the 1997 report of the IPF to the UN Commission emphasized the powers and responsibilities of national governments and the importance of National Forest Programmes but with the fuller participation of local communities and with enhanced access to international assistance
