Energy and The Complete Universe. Part 4 Bijon Karmakar, 2024-10-22 The series Energy and The Complete Universe Part 4 synthesizes advanced ideas on consciousness energy gravity and their interconnectedness offering a comprehensive overview of the book's exploration into the nature of life the Universe and human existence It explores the multifaceted nature of consciousness in living and non living intelligent systems and its interactions with various energies particularly those in the suitable nature of this matured 2nd Energy Belt It delves into how consciousness can be lost or altered examining the technical aspects that govern its existence and influence The validity of sensory perception such as reality locality and entanglement plays a crucial role in understanding consciousness particularly in multi dimensional spaces Human consciousness is restricted by the healthiness of brain processors and processing capabilities constrained by three dimensional physical computation which mainly pursues comparable strategies Indeed the nature of physically derived consciousness differs significantly across various energy levels However from the standpoint of the True form of energy when considering the matured Universe and the 2nd energy belt the original consciousness remains intact upon reaching maturity continuing to regulate everything precisely and eternally In the context of Gravity this book provides a deeper understanding of gravity which plays a crucial role on Earth and throughout the matured 2nd energy belt from its molecular level effects on biological systems to its broader cosmic functions It discusses the technical aspects of gravity in physics including gravitational fields force fields and orbital dynamics and how these principles apply to energy fields and mass energy frames This book discusses the daily application of gravity particularly in human intelligence and activities like football where gravity impacts physical movements and even spectators Everyone recognizes the significance of 0 Zero a fundamental concept in mathematics Furthermore the standard concept 0 has grander implications for understanding how it functions at energy levels like the Supreme Universe the actual Universe Also for the observable Universes and the energy Universes particularly in the 2nd energy belt This zero 0 or 0 like or like nothingness sense plays a vital role in understanding the founding position before forming any energy structures energy structures may mean mass energy frame and fields One should not be confounded by the overall outcomes of classical objects or microparticles when attempting to analyze something at the most fundamental energy level Remember energy is Truly the complete essence of everything Due to the extraordinarily prompt componential nature comprising in built energy elements and their integrated values or working essences in any assumable unit value mass energy even the energies in the vast energy ocean of the 2nd energy belt play the most momentarily dynamic roles As a result primarily energy becomes a self dependent and self regulating authority whenever and wherever it manifests as a classical object or microparticle of distinctive or indistinctive substance This part of the book series explores the paradoxes of life and death from a quantum and energy perspective challenging traditional definitions of being alive or dead It addresses common misinterpretations of terms like dead and decay demonstrating how

these concepts may not fully apply in the context of energy Furthermore it discusses the concept of free will and its limited application in bio intelligent systems as a critical topic It explores how beings make choices based on their physically evolving consciousness and the continuous influence of their internal and external energy levels operations whether resulting in good flawed or irritating decisions in various situations From an energy perspective it also analyzes how the concept of life and its significance extends beyond the traditional human centric view embracing other forms of existence The standard belief in the binary nature of life and death does not fully capture the true meaning of these terms Instead from the standpoint of energy a core principle emerges life never truly ends and death never actually occurs only the transformation of physical forms into energy and back again This part of the book series also explores the relationship between humanity and artificial intelligence AI While AI can demonstrate high capacity performance based on its design and intended functions it is limited when competing beyond the individual level especially as part of a larger living species In the broader context of a habitable planet the naturally evolved human species remains more adaptive and versatile in many ways It is because the Earth s biosphere shaped by Mother Nature continually nurtures life and introduces subtle energy level changes to all its progeny including biologically evolved living beings Based on the above explanation this book series pragmatically suggests the possibility of extraterrestrial life forms that have evolved in environments very different from Earth s biological systems Specifically it proposes the idea of alien species emerging from non biological processes in atmospheres that do not rely on the same types of biological energy resources that sustain life on this carbon based habitable Earth All the books in the series include clear and reasonable drawings that demonstrate how energy functions in more than just specific directions These drawings help explain that energy operates in several dimensions not just the ones we re most familiar with adding extra layers of complexity to how energy behaves in the actual Universe especially in the matured 2nd energy belt Thanks
