Rigorous Methods In Particle Physics Springer Tracts In Modern Physics Volume 119:

Springer Tracts in Modern Physics, 1990 **Compton Scattering** Frank Wissmann, 2003-12-03 A comprehensive summary of experiments on Compton scattering from the proton and neutron performed at the electron accelerator MAMI The experiments cover a photon energy range from 30 MeV to 500 MeV The reader is introduced to the theoretical concepts of Compton scattering followed by a description of the experiments on the proton their analysis and results **Particle Induced Electron Emission II**, 2006-04-11 Electron emission is a fundamental phenomenon which accompanies most interactions of energetic particles with solid surfaces Not only is it a special effect which for almost ninety years has attracted the interest of physicists but it is also of acute importance in such fields as radiation effects and transport phenomena in solids e g radiation biology plasma surface interactions microtechnology surface analysis ion microscopies particle detector development and others While Volume I emphasizes the theoretical description of the mechanisms of electron emission this volume reviews modern experimental trends and aspects of the phenomenon e g kinetic electron emission from massive solids and from thin foils under bombardment with positive negative and neutral particles and the measurement of electron statistics in connection with potential and kinetic emission due to slow singly and multiply charged projectiles Particle Induced Electron Emission I, 2006-04-11 This monograph discusses collision induced electron emission from nearly free electron metals by ion or electron impact This subject is as is well known of acute importance in understanding plasma wall interactions in thermonuclear reactors It is also the basis for one of the most exciting technological developments of the last few years scanning electron microscopy Several electron excitation mechanisms of electrons in the target are considered excitation of single conduction and core electrons excitation by plasmon decay and by Auger processes Transport of inner excited electrons is simulated by the Boltzmann equation incorporating both elastic and inelastic collisions The numerical calculation of scattering rates uses a dynamically screened Coulomb interaction These results for the energy distributions of emerging electrons as well as the electron yield are compared with recent experimental measurements on electron emission from polycrystalline aluminum *Critical Phenomena at Surfaces and Interfaces* Helmut Dosch, 2006-04-11 This book deals with the application of grazing angle x ray and neutron scattering to the study of surface induced critical phenomena With the advent of even more advanced synchrotron radiation sources and new sophisticated instrumentation this novel technique is expected to experience a boom The comprehensive and detailed presentation of theoretical and experimental aspects of the scattering of evanescent x ray and neutron waves inside a solid makes this book particularly useful for tutorial courses Particular emphasis is put on the use of this technique to extract microscopic information correlation functions from the real structure of a surface from buried and magnetic interfaces and from surface roughness Inelastic Scattering of X-Rays with Very High Energy Resolution Eberhard Burkel, 2006-04-11 Inelastic scattering of X rays with very high energy resolution has finally become possible thanks to a new generation of high

intensity X ray sources This development marks the end to the traditional belief that low energy excitations like lattice vibrations cannot be resolved directly with X rays Inelastic scattering experiments allow to observe directly the small energy shifts of the photons Studies of lattice vibrations of excitations in molecular crystals of collective excitations in liquids and electronic excitations in crystals demonstrating the broad applicability and power of this new technology are discussed in this book The progress in this field opens up fantastic new research areas not only in physics but also in other disciplines such as materials science biology and chemistry

Current-Induced Nonequilibrium Phenomena in Quasi-One-Dimensional Superconductors Reinhard Tidecks, 2006-03-06 Starting from the early experiments this detailed presentation containing more than 500 references provides a comprehensive review on current induced nonequilibrium phenomena in quasi one dimensional superconductors leading the reader from the fundamentals to the most recent research results Experiments on monocrystalline filaments whiskers including those obtained by the author are compared with results on long thin film microbridges and related species and interpreted within the theoretical framework Instructions on experimental techniques are given and yet unresolved problems are discussed The book is well suited as an introduction for the novice and as a handbook for the active researcher

Surface Scattering Experiments with Conduction Electrons Dieter Schumacher, 2007-09-17 Surface Scattering Experiments with Conduction Electrons shows how this process can be used to investigate surface processes of thin metal films Since a thin film is in one direction of a size comparable to the mean free path of the conduction electrons such a film is both substrate and sensor and must be characterized by other surface analytical methods as demonstrated here Also discussed is how the dc resistivity measurement permits the study of surface processes such as adsorption desorption and surface diffusion up to crystalline growth The in situ observation of epitaxial growth is additionally shown to be possible Thus the electronic structure of superimposed metal films and superlattices can be elucidated This is an essential topic for all surface physicists

Nuclear Pion Photoproduction Anton Nagl, Varadarajan Devanathan, Herbert Überall, 2006-04-11 Photoproduction of pions from complex nuclei has become an investigative tool for 1 the detailed form of the elementary photopion amplitude 2 the pion nucleus optical potential 3 nuclear structure and 4 off shell and medium effects on the elementary amplitude in nuclear processes In this book all these aspects are considered in detail With improved experimental accuracy and beam technology the study of nuclear pion photoproduction will break new ground and become an even more powerful investigative tool This monograph is intended as an introductory guide as well as a reference manual for graduate students and researchers working in this important area of physics

QCD at HERA Michael Kuhlen,1999 The book provides a review of the hadronic final state measurements at HERA in deep inelastic scattering It covers general event properties particle spectra heavy flavours jets event shape measurements QCD instantons and small x physics The emphasis is on experimental results providing quick access to the data complete up to fall 1997 for reference The results are discussed in the context of QCD

Ionization Measurements in High Energy Physics Branislav Sitar,Gabriel I. Merson,Valery A. Chechin,Yury A. Budagov,1993-09-28 This completely revised and enlarged English edition of the original Russianbook deals with the identification and separation of charged particles in high energy physics experiments Proportional drift and streamer chambers as well as ionization measurements with cloud spark and ionization chambers are discussed Both scientists and advanced undergraduate students specializing in high energy or nuclear physics will find useful information for planning and performing ionization measurements and their analyses
