Essays on Insurance and Taxation Marika Ilona Cabral, 2011 This dissertation consists of four distinct essays In an essay entitled Claim Timing and Ex Post Adverse Selection Evidence from Dental Insurance I explore the impact of strategic timing on insurance market allocations If people can delay a claim just long enough to buy more insurance coverage in anticipation of it severe adverse selection may result and in extreme cases this can lead to the complete unraveling of an insurance market I study these forces by analyzing dental treatments and insurance with the goal of understanding insurance in the market for dental care and also revealing lessons that apply to insurance markets more broadly Using rich claim level data from a large firm my analysis reveals that the strategic delay of treatment and the associated adverse selection may be an important factor in explaining why so few people have dental coverage in the US and why typical dental insurance contracts provide so little insurance More generally my results suggest that insurance products without contract features designed to limit coverage for strategically delayed costs e.g. open enrollment periods pricing pre-existing conditions may generate unraveling An essay entitled The Hated Property Tax Salience Tax Rates and Tax Revolts with Caroline Hoxby explores the relationship between the salience of the property tax and observed property tax rates We hypothesize that high salience explains the unpopularity of the property tax the level of the property tax and prevalence of property tax revolts To identify variation in the salience of the property tax over local jurisdictions and over time we exploit conditionally random variation in tax escrow a method of paying the property tax that makes it much less salient We find that areas in which the property tax is less salient are areas in which property taxes are higher and property tax revolts are less likely to occur In an essay entitled Private Coverage and Public Costs Identifying the Effect of Private Supplemental Insurance on Medicare Spending with Neale Mahoney we explore the impact of private supplemental insurance on Medicare spending Private supplemental insurance to fill the gaps of Medicare known as Medigap is very popular We estimate the impact of this supplemental insurance on total medical spending using an instrumental variables strategy that leverages discontinuities in Medigap premiums at state boundaries Our estimates suggest that Medigap increases medical spending by 57 percent or about 40 percent more than previous estimates suggest Back of the envelope calculations indicate that a 20 percent tax on premiums would generate combined revenue and savings of 6.2 percent of Medicare baseline costs An essay entitled The Effect of Insurance Coverage on Preventive Care with Mark Cullen

explores the effect of insurance coverage on preventive care utilization Using health insurance claims data from a large company this paper examines the implementation of an insurance benefit design which differentially increased the marginal price of curative care non preventive care while decreasing the marginal price of prevention We examine the effect of the differential price change on the use of preventive procedures We reveal evidence consistent with an important negative cross price effect that is increases in the price of curative care can depress preventive care utilization

Genes and Insurance Marcus Radetzki, Marian Radetzki, Niklas Juth, 2003-11-06 The result of two key social developments in recent years are examined here the partial dismantling of the welfare state and the progress of genetics Genetic insights are increasingly valuable for risk assessment and insurers would like to use these insights to help determine premiums Combined with the fact that social welfare is being curtailed this could potentially create an uninsured high risk population Along with considerations of autonomy and privacy this is the basis for an ethical critique of insurer's access to information The result

has often been regulation of such information but the authors argues that due to adverse selection regulation will not solve these problems and this may jeopardize the survival of private personal insurance Instead we should look towards the resurrection of social insurance a key component of the welfare state This will interest academic researchers as well as professionals involved with genetics and insurance
