Mission To Mars:

Mission to Mars IntroBooks,2018-02-21 Mars has always signaled to the mankind when it would travel high in the night sky The ancient people have assumed that this rust red planet was the god of war and therefore they christened it with the name Mars The early explorers were armed with newly forms of invented telescopes discovered that Mars exhibited seasonal color changes and were subjected to dust storms that used to encircle the globe and might even have had several channels that could have crisscrossed the surface The recent explorers make use of the advanced technology and the robotic surrogates to extend their reach out to the planet Mars With the use of the advanced technology they have discovered that Mars is much more interesting and the complex planet in the Solar System As per the claims of the present explorers that pieces of Mars have even arrived on the Earth as meteorites and these particles are pointing out to the possible existence of life on Mars This has resulted in the growth of the active interests of the explorers to gain impetus about the living conditions on Mars

The Human Factor in a Mission to Mars Konrad Szocik,2019-04-09 A manned mission to Mars is faced with challenges and topics that may not be obvious but of great importance and challenging for such a mission This is the first book that collects contributions from scholars in various fields from astronomy and medicine to theology and philosophy addressing such topics The discussion goes beyond medical and technological challenges of such a deep space mission The focus is on human nature human emotions and biases in such a new environment The primary audience for this book are all researchers interested in the human factor in a space mission including philosophers social scientists astronomers and others This volume will also be of high interest for a much wider audience like the non academic world or for students

Human Missions to Mars Donald Rapp,2007-10-24 In Human Missions to Mars Donald

Rapp looks at human missions to Mars from an engineering perspective. He begins by describing the pros and cons of robotic exploration versus human exploration and then examines the ideas for sending humans to Mars from the point of view of both the enthusiast and the skeptic. Chapter 2 describes how space missions are planned and how they may be achieved as a sequence of separate steps. Chapter 3 deals with the complex issues relating to the outward journey to Mars and the return leg. The author deals with propulsion systems and with the analysis of the various trajectories which may be utilized for such a mission. He divides mission into a number of stages: Earth's surface to low Earth orbit (LEO), departing from LEO, Mars orbit insertion and landing, ascent from Mars, trans Earth injection from Mars orbit and Earth orbit insertion and landing. Chapter 4 discusses a wide range of elements critical to a human Mars mission including life support consumables, radiation effects and shielding, microgravity effects, abort options and mission safety, possible habitats on the Martian surface and aero-assisted orbit insertion and entry, decent and landing. For any human mission to the Red Planet, the possible utilization of any resources indigenous to Mars would be of great value and such possibilities are discussed in Chapter 5. The use of indigenous resources on the Moon is described as a precursor to the availability of similar resources on Mars and issues such as fuelling Mars-bound craft from lunar resources, the use of lunar ferries, staging, assembly and refueling in near Earth space are all discussed. The important applications arising from the transportation of hydrogen to Mars are also described. Chapter 6 deals with a range of previous Mars mission studies and the technologies they employed. Chapter 7 looks at how NASA is planning for its return to the Moon and the use of the Moon as a stepping stone to Mars. Chapter 8 presents the author's detailed analysis of why, in his opinion, the current NASA approach will fail to send humans to Mars before 2080. The book concludes with three appendices describing the use of solar energy on the Moon and on Mars and the value of indigenous water on Mars.

Go on a Mission to Mars Dougal Jerram, 2020-06-02. Coordinates for a mission to Mars have been locked into your navigation computer. But there are a few things you need to know before getting there. Are you ready for the seven-month journey and the astronaut training program? The space food served on the rocket is hardly award-winning. Even when you arrive at your destination, the planet itself will not seem welcoming with its epic dust storms and its freezing winter temperatures. But the sunsets will be spectacular and Earth is just a green and blue speck away. Written as an explorer's guide and packed with scientific facts about our inspirational nearest neighbour, this book is guaranteed to inspire any young scientist.
