Modeling And Optimization Of The Lifetime Of Technologies:

Modeling and Optimization of the Lifetime of Technologies N.V. Hritonenko, Yuri P. Yatsenko, 2013-12-01 Modern economic growth is characterized by structural changes based on the introduction of new technologies into economics The replacement and renovation of technologies in industrial environments undergoing technical change is clearly one of the key aspects of economic development The mathematical modeling of evolutionary economics under technical change TC has been rigorously considered by many authors during last decades There is a wide variety of economic approaches and models describing different aspects of technical change Among these are the models of embodied technical progress 19 35 70 129 endogenous growth models 94 102 the models of technological innovations 31 32 41 and others The perspective self organization evolutionary approach is developed in 20 38 122 123 124 126 which unites the aspects of diffusion of new technologies technological and behavioral diversity of firms learning mechanisms age dependent effects and other important features of real life economics On the whole an interest in evolutionary economics has brought considerable progress in the description and conceptualization of the sources characteristics direction and effects of technical change 125 However the modeling and control of technology lifetime under technical change has received rather little attention in mathematical economics in contrary to other aspects of technical progress The lifetime of technologies has rarely been formally treated as a part of more general mathematical theory of economic dynamics A problem which is still to be resolved consists in establishing the rational strategies of technologies replacement under various assumptions on the behavior of technical change

Optimization of Computer Networks Pablo Pavón Mariño, 2016-05-02 This book covers the design and optimization of computer networks applying a rigorous optimization methodology applicable to any network technology It is organized into two parts In Part 1 the reader will learn how to model network problems appearing in computer networks as optimization programs and use optimization theory to give insights on them Four problem types are addressed systematically traffic routing capacity dimensioning congestion control and topology design Part 2 targets the design of algorithms that solve network problems like the ones modeled in Part 1 Two main approaches are addressed gradient like algorithms inspiring distributed network protocols that dynamically adapt to the network or cross layer schemes that coordinate the cooperation among protocols and those focusing on the design of heuristic algorithms for long term static network design and planning problems Following a hands on approach the reader will have access to a large set of examples in real life technologies like IP wireless and optical networks Implementations of models and algorithms will be available in the open source Net2Plan tool from which the user will be able to see how the lessons learned take real form in algorithms and reuse

or execute them to obtain numerical solutions An accompanying link to the author's own Net2plan software enables readers to produce numerical solutions to a multitude of real life problems in computer networks www.net2plan.com **Life**
