Population Change and the Economy: Social Science Theories and Models Andrew M. Isserman, 2012-12-06 Population change and population forecasts are receiving considerable attention from governmental planners and policy makers as well as from the private sector Old patterns of population redistribution industrial location labor force participation household formation and fertility are changing The resulting uncertainty has increased interest in forecasting because mere extrapolations of past trends are proving inadequate In the United States of

America population forecasts received even more attention after federal agencies began distributing funds for capital infrastructure to state and local governments on the basis of projected future populations. If the national government had based those funding decisions on locally prepared projections the optimism of local officials would have resulted in billions of dollars worth of excess capacity in sewage treatment plants alone. Cabinet level inquiries concluded that the U S Department of Commerce should 1 assume the responsibility for developing a single set of projections for use whenever future population was a consideration in federal spending decisions and 2 develop methods which incorporate both economic and demographic factors causing population change. Neither the projections prepared by economists at the Bureau of Economic Analysis nor those prepared by demographers at the Bureau of the Census were considered satisfactory because neither method adequately recognized the intertwined nature of demographic and economic change. Against this background the American Statistical Association ASA and the U S

The Dynamic Systems of Basic Economic Growth Models Bjarne S.

Jensen, 2012-02-02 Two central problems in the pure theory of economic growth are analysed in this monograph 1 the dynamic laws governing the economic growth processes 2 the kinematic and geometric properties of the set of solutions to the dynamic systems. With allegiance to rigor and the emphasis on the theoretical fundamentals of prototype mathematical growth models the treatise is written in the theorem proof style. To keep the exposition orderly and as smooth as possible the economic analysis has been separated from the purely mathematical issues and hence the monograph is organized in two books. Regarding the scope and content of the two books an Introduction and Overview has been prepared to offer both motivation and a brief account. The introduction is especially designed to give a recapitulation of the mathematical theory and results presented in Book II which are used as the unifying mathematical framework in the analysis and exposition of the different economic growth models in Book I. Economists would probably prefer to go directly to Book I and proceed by consulting the mathematical theorems of Book II in confirming the economic theorems in Book I. Thereby both the independence and interdependence of the economic and mathematical argumentations are respected.

Modelling Macroeconomic Adjustment with Growth in Developing Economies Sushanta K.

Mallick, 2018-08-13 First published in 1999 this influential volume explores Macroeconomic Adjustment with a particular focus on India. Its inspiration originated from the introduction of stabilisation and structural adjustment policies in India in 1991. Mallick examines the application of this policy package by the International Monetary Fund and the World Bank to Developing Economies. First looking at the initial conditions and generators of imbalances the appropriate policy framework for India's initial conditions and structural characteristics is considered. While the effectiveness of the IMF had been strongly criticised Mallick explains how it could be used more effectively. He argues that the programs applied are often contradictory and using India as an example examines the effects of policy reform on its trade sector the repercussions on the direct

economy and the costs associated with such policies in restoring stability and future economic growth with particular support for the Vector Autoregression VAR framework Mallick forwards a new structural model for policy purposes evaluated for overall performance and optimal control Macroeconomics for Emerging East Asia Calla Wiemer,2022-12 Uses a distinctive approach to understanding macroeconomics for emerging East Asian economies using the latest data and case study analysis *Economic Theory and the Ancient Mediterranean* Donald W. Jones,2014-06-03 Economic Theory and the Ancient Mediterranean presents a comprehensive introduction to the application of contemporary economic theory to the ancient societies of the Mediterranean Sea from the period of 5000 BCE to 400 CE Offers an accessible presentation of modern economic theory and its relationships to ancient societies Presents innovative expositions and applications of economic theory to issues in antiquity not often found in the literature Features insightful discussions of the relevance of contemporary economic models to various situations in antiquity Written for a broad range of scholars of ancient Mediterranean regions including archaeologists ancient historians and philologists **World Scientific Reference On Asia-Pacific Trade Policies (In 2 Volumes)** Kym Anderson,2019-12-19 Protectionism has been placed under the media spotlight with news headlines generated by populist anti globalization movements and Donald Trump s term as US President Such a policy stance is putting at risk unilateral trade reform efforts in the Asia Pacific region and elsewhere This two volume reference work provides a timely update on how far the region has come in opening markets It analyzes the motivations or ostensible objectives of policies adopted in the past the changing extent of the domestic price distortions involved the economic effects of those policies at home and abroad the political economy forces at work that brought about those policies and their subsequent reform their consequences for international trade economic welfare and poverty alleviation and prospects for sustainable improvements in current policies Case studies of major East Asian economies and Australia reveal how government priorities to assist farmers versus manufacturers changed over the past century but especially since the 1980s and how that has affected trade between natural resource poor and resource rich economies This set is highly recommended for those who are interested in the economics and politics of trade policies agricultural economics economic development and food and nutrition security in the Asia Pacific region and beyond *Modeling Economic Instability* Michaël Assous,Vincent Carret,2022-01-31 This book offers a fresh perspective on the early history of macroeconomics by examining the macro dynamic models developed from the late 1920s to the late 1940s and their treatment of economic instability It first explores the differences and similarities between the early mathematical business cycle models developed by Ragnar Frisch Michal Kalecki Jan Tinbergen and others which were presented at meetings of the Econometric Society and discussed in private correspondence By doing so it demonstrates the diversity of models representing economic phenomena and especially economic crises and instability Jan Tinbergen emerged as one of the most original and pivotal economists of this period before becoming a leader of the macro econometric movement a role for which he is better known His emphasis on

economic policy was later mirrored in the United States in Paul Samuelson's early work on business cycles analysis which drawing on Alvin Hansen aimed at interpreting the 1937-1938 recession. The authors then show that the subsequent shift in Samuelson's approach from the study of business cycle trajectories to the comparison of equilibrium points provided a response to the econometricians' critique of early Keynesian models. In the early 1940s Samuelson was able to link together the tools that had been developed by the econometricians and the economic content that was at the heart of the so-called Keynesian revolution. The problem then shifted from business cycle trajectories to the disequilibrium between economic aggregates and the issues raised by the global stability of full employment equilibrium. This was addressed by Oskar Lange who presented an analysis of market coordination failures and Lawrence Klein, Samuelson's first PhD student who pursued empirical work in this direction. The book highlights the various visions and approaches that were embedded in these macro-dynamic models and that their originality is of interest to today's model builders as well as to students and anyone interested in how new economic ideas come to be developed.

Theorists of Economic Growth from David Hume to the Present

W. W. Rostow, 1992-09-24. This history of theories and theorists of economic growth elucidates the economic theory, economic history and public policy observations of the renowned scholar W. W. Rostow. Looking at the economic growth theories of the classic economists up to 1870, Rostow compares Hume and Adam Smith, Malthus and Ricardo, and J. S. Mill and Karl Marx. He then examines the period 1870-1939 and its economic theorists including Schumpeter, Colin Clark, Kuznets and Harrod, and surveys the three forms of growth analysis in the postwar era: formal models, statistical morphology, and development theories. This authoritative overview also includes an agenda of unresolved problems in growth analysis and a description of the five major tasks statesmen will confront over the next several generations.

Economic Analysis of the Soviet-Type System
