Modeling The External Risks Of Airports For Policy Analysis:

Modeling the External Risks of Airports for Policy Analysis Stephen D. Brady, Richard John Hillestad, 1995 Despite the improving safety record of commercial aviation over the last decades crashes still occur These include the October 1992 crash of an El Al freight airliner into an apartment building near Amsterdam killing more than 40 people and motivating the study behind this report While airports and airlines in Western Europe undergo expansion and consolidation the opening of Eastern Europe has increased the number of East West flights added new airlines and forced potentially dangerous interfaces between East West air control systems differing aircraft maintenance and training standards and aircraft of different technological capability This report describes the mathematical model SAGE A Safety Assessment of the Ground Environment of Airports which was developed as a general tool to evaluate the crash risk to populations living in close proximity to airports and to evaluate various policy options for mitigating this risk *Third-Party Risk Policies in the Netherlands* Ben J.M. Ale, 2023-04-04 It is not easy to keep the population safe in a country that is one of the most densely populated in the world is a hub of international transport over land and water as well as through the air and about one third of which lies under sea level Third party risk policies developed gradually in the Netherlands but became acute in the latter part of the 20th century with the growth of various industries use and production of hazardous materials The Dutch government considering its constitutional responsibility to protect the life health and wellbeing of its people must resolve the ongoing debate between the general population who are exposed to these risks and those profiting from the creation of said risks the resultant policies are a product of this balancing act This book will be of interest to politicians policymakers civil servants and the general population as it contains valuable insight into what constitutes sustainable policy and how it can be achieved Quantified Societal Risk and Policy Making Richard E. Jorissen, P.J. Stallen, 2013-04-17 Quantified Societal Risk and Policy Making is the result of an international workshop on societal risk organized by the Dutch Ministry for Transport Public Works and Water Management with additional financial support from the Directorate for Transportation DG VII of the European Union Managing risks whether there is a strong man made or natural component basically means assessing alternative options under uncertainty The possibility of multiple fatalities is one of the factors that can vary between options This volume is concerned with one particular type of risk the risk of death of a number of people in one accident and with one particular tool probabilistic risk analysis as they are developing in various domains of society nowadays Generally this risk is labelled societal risk This book shows how such comparisons are shaped at present in various hazard domains such as flood protection location and physical planning of industry transportation of chemicals and prevention of aircraft accidents It examines how to represent aggregate risks from major hazards in ways that can be handled by policy makers The purpose of the book is to increase the awareness of societal risk disseminate available knowledge of existing approaches and exchange information on applications from various domains Quantified Societal Risk and Policy Making should be of interest to all
