Modeling Uncertainty An Examination Of Stochastic Theory Methods And Applications:

Modeling Uncertainty Moshe Dror, Pierre L'Ecuyer, Ferenc Szidarovszky, 2019-11-05 Modeling Uncertainty An Examination of Stochastic Theory Methods and Applications is a volume undertaken by the friends and colleagues of Sid Yakowitz in his honor Fifty internationally known scholars have collectively contributed 30 papers on modeling uncertainty to this volume Each of these papers was carefully reviewed and in the majority of cases the original submission was revised before being accepted for publication in the book The papers cover a great variety of topics in probability statistics economics stochastic optimization control theory regression analysis simulation stochastic programming Markov decision process application in the HIV context and others There are papers with a theoretical emphasis and others that focus on applications A number of papers survey the work in a particular area and in a few papers the authors present their personal view of a topic It is a book with a considerable number of expository articles which are accessible to a nonexpert a graduate student in mathematics statistics engineering and economics departments or just anyone with some mathematical background who is interested in a preliminary exposition of a particular topic Many of the papers present the state of the art of a specific area or represent original contributions which advance the present state of knowledge In sum it is a book of considerable interest to a broad range of academic researchers and students of stochastic systems **Decision Making**

with the Analytic Network Process Thomas L. Saaty, Luis G. Vargas, 2006-09-10 The Analytic Network Process ANP developed by Thomas Saaty in his work on multicriteria decision making applies network structures with dependence and feedback to complex decision making This book is a selection of applications of ANP to economic social and political decisions and also to technological design The chapters comprise contributions of scholars consultants and people concerned about the outcome of certain important decisions who applied the Analytic Network Process to determine the best outcome for each decision from among several potential outcomes The ANP is a methodological tool used to organize knowledge and thinking elicit judgments registered in both in memory and in feelings quantify the judgments and derive priorities from them and finally synthesize these diverse priorities into a single mathematically and logically justifiable overall outcome In deriving this outcome the ANP also allows for the representation of diverse opinions in the midst of discussion and debate *Numerical*

Methods and Applications Ivan Dimov, Lirkov Ivan Dimov, Stefka Dimova, Natalia Kolkovska, 2011-01-14 This book constitutes the thoroughly refereed post conference proceedings of the 7th International Conference on Numerical Methods and Applications NMA 2010 held in Borovets Bulgaria in August 2010 The 60 revised full papers presented together with 3 invited papers were carefully reviewed and selected from numerous submissions for inclusion in this book The papers are organized in topical sections on Monte Carlo and quasi Monte Carlo methods environmental modeling grid computing and applications metaheuristics for optimization problems and modeling and simulation of electrochemical processes

Principles of Mathematics in Operations Research Levent Kandiller, 2006-12-18 Principles of Mathematics in Operations

Research is a comprehensive survey of the mathematical concepts and principles of industrial mathematics. Its purpose is to provide students and professionals with an understanding of the fundamental mathematical principles used in Industrial Mathematics OR in modeling problems and application solutions. All the concepts presented in each chapter have undergone the learning scrutiny of the author and his students. The conceptual relationships within the chapter material have been developed in the classroom experience working with the students level of understanding. The illustrative material throughout the book i.e. worked out problems and examples of the mathematical principles was refined for student comprehension as the manuscript developed through its iterations and the chapter exercises are refined from the previous year's exercises. In sum, the author has carefully developed a pedagogically strong survey textbook of OR and Industrial Mathematics.

The Theory and Practice of Revenue Management Kalyan T. Talluri, Garrett J. van Ryzin, Garrett Van Ryzin, 2005-02-23 Revenue management RM has emerged as one of the most important new business practices in recent times. This book is the first comprehensive reference book to be published in the field of RM. It unifies the field drawing from industry sources as well as relevant research from disparate disciplines as well as documenting industry practices and implementation details. Successful hardcover version published in April 2004.

Regression Models for Time Series Analysis Benjamin Kedem, Konstantinos Fokianos, 2005-02-25 A thorough review of the most current regression methods in time series analysis. Regression methods have been an integral part of time series analysis for over a century. Recently new developments have made major strides in such areas as non continuous data where a linear model is not appropriate. This book introduces the reader to newer developments and more diverse regression models and methods for time series analysis. Accessible to anyone who is familiar with the basic modern concepts of statistical inference. *Regression Models for Time Series Analysis* provides a much needed examination of recent statistical developments. Primary among them is the important class of models known as generalized linear models GLM which provides under some conditions a unified regression theory suitable for continuous categorical and count data. The authors extend GLM methodology systematically to time series where the primary and covariate data are both random and stochastically dependent. They introduce readers to various regression models developed during the last thirty years or so and summarize classical and more recent results concerning state space models. To conclude they present a Bayesian approach to prediction and interpolation in spatial data adapted to time series that may be short and/or observed irregularly. Real data applications and further results are presented throughout by means of chapter problems and complements. Notably the book covers important recent developments in Kalman filtering dynamic GLMs and state space modeling. Associated computational issues such as Markov chain Monte Carlo and the EM algorithm. Prediction and interpolation. Stationary processes.

Building Intuition Dilip Chhajed, Timothy J. Lowe, 2008-07-11 One of the primary purposes of any model is to build intuition and generate insights. Typically a model is developed to be able to better understand phenomena that are otherwise difficult to comprehend. Models can also help in verifying the correctness of an

intuition or judgment In spite of the fact that many educators and practitioners recognize the intuition building power of simple models this is the first book in the field that uses the power of the basic models and principles to provide students and managers with an intuitive understanding of operations management Building Intuition Insights From Basic Operations Management Models and Principles touches on nine fundamental models and principles and outlines the key insights behind each one To ensure that the volume is accurate authoritative accessible and well written the chapters are developed by leading experts in each chapter area and written with the students and managers in mind The book s primary purpose is to motivate and to enable readers to develop insights with respect to a number of models that are central to the study and practice of operations management

To Queue or Not to Queue Refael Hassin,Moshe Haviv,2012-12-06 The literature on equilibrium behavior of customers and servers in queuing systems is rich However there is no comprehensive survey of this field Moreover what has been published lacks continuity and leaves many issues uncovered One of the main goals of this book is to review the existing literature under one cover Other goals are to edit the known results in a unified manner classify them and identify where and how they relate to each other and fill in some gaps with new results In some areas we explicitly mention open problems We hope that this survey will motivate further research and enable researchers to identify important open problems The models described in this book have numerous applications Many examples can be found in the cited papers but we have chosen not to include applications in the book Many of the ideas described in this book are special cases of general principles in Economics and Game Theory We often cite references that contain more general treatment of a subject but we do not go into the details we have highlighted the results For each topic covered in the book that in our opinion are the most important We also present a brief discussion of related results The content of each chapter is briefly described below Chapter 1 is an introduction It contains basic definitions models and solution concepts which will be used frequently throughout the book

Evaluation and Decision Models with Multiple Criteria Denis Bouyssou,Thierry Marchant,Marc Pirlot,Alexis Tsoukias,Philippe Vincke,2006-06-07 Formal decision and evaluation models are sets of explicit and well defined rules to collect assess and process information in order to be able to make recommendations in decision and or evaluation processes They are so widespread that almost no one can pretend not to have used or suffered the consequences of one of them Our earlier companion volume Evaluation and Decision Models heavily criticised formal models but also argued that they could be useful On the other hand Evaluation and Decision Models with Multiple Criteria is a guide aimed at helping the analyst to choose a model and use it consistently We propose a sound analysis of techniques and our presentation can be extended to most decision and evaluation models as a decision aiding methodology This volume is intended for the enlightened practitioner for anyone who uses decision or evaluation models for research or for applications and is willing to question his practice to have a deeper understanding of what he does
