Modelling State Observation And Diagnosis Of Quantised Systems:

Modelling, State Observation and Diagnosis of Quantised Systems Jochen Schröder, 2003-07-01 Ongoing advances in science and engineering enable mankind to design and operate increasingly sophisticated systems Both their design and operation require the understanding of the system and its interaction with the environment This necessitates the formalisation of the knowledge about the system by models A major issue is what kind of model is best suited for a given task This book is about the supervision of continuous dynamical systems Such systems are typically described by differential equations However this does not automatically mean that differential equations are proper models for solving supervision tasks Instead this book and recent approaches in literature show that supervision tasks do in general not require the use of such precise models as differential equations This is of interest because uncertainties typically occurring in supervision make the use of precise models very difficult Alternative approaches therefore use less precise models such as discrete event descriptions to solve supervision tasks on a higher level of abstraction Discrete event descriptions in form of automata are one of the key elements of this book To reach this higher level of abstraction uncertainties by quantisation are introduced on purpose taking into account a loss of precision This is one of the main difference to other approaches When using numerical models like transfer functions or differential equations uncertainties make the analysis more difficult Not so here where the system is described on a qualitative level on which uncertainties are naturally incorporated The book presents a new way to describe systems for supervision Preparing this book I learned that the key to solve supervision problems is simplicity

Modeling and Partially Coordinated Diagnosis of Asynchronous Discrete-Event Systems Sebastian Drüppel, 2012 This work presents a novel approach to modeling analysis and diagnosis of coupled mechatronical systems with partially autonomous behavior and asynchronous state transitions The systems under consideration are assumed to have the following properties The internal interactions are immeasurable but reliable and the measurements relevant for diagnosis are given as a sequence of events Asynchronous networks of input output automata I/O automata are developed to cope with partial coupling between components and to reduce the computational complexity of the diagnostic algorithms I/O automata are used to model those components Their measurable inputs and outputs are modeled as control signals Interconnection signals are used to model the internal dependencies among the components They are linked via an interaction block to one another The criterion known from synchronous networks of I/O automata is extended to ensure the well posedness of this modeling formalism To check for partially autonomous behavior two types of autonomy are introduced and discussed Structural autonomy and state dependent autonomy To carry out the diagnosis three different information structures are investigated Centralized decentralized and partially coordinated The centralized approach yields the ideal diagnostic result but reduction of the computational complexity by using online composition is rather small Further reduction of the computational complexity is accomplished by decentralized diagnosis It yields only in the case of state dependent autonomy a complete and

sound diagnostic result In general the lack of soundness arises Both obtaining an ideal diagnostic result and reducing the computational complexity is obtained by the partially coordinated diagnostic algorithm **Diagnosis and Fault-Tolerant Control** Mogens Blanke, Michel Kinnaert, Jan Lunze, Marcel Staroswiecki, 2013-03-14 Technological systems are vulnerable to faults Actuator faults reduce the performance of control systems and may even cause a complete break down of the system Erroneous sensor readings are the reason for operating points that are far from the optimal ones Wear reduces the efficiency and quality of a production line In most fault situations the system operation has to be stopped to avoid damage to machinery and humans As a consequence the detection and the handling of faults play an increasing role in modern technology where many highly automated components interact in a complex way and where a fault in a single component may cause the malfunction of the whole system Due to the simultaneously increasing economic demands and the numerous ecological and safety restrictions to be met high dependability of technological systems has become a dominant goal in industry in the recent years This book introduces the main ideas of fault diagnosis and fault tolerant control It gives a thorough survey of the new methods that have been developed in the recent years and demonstrates them by application examples To the knowledge of the authors all major aspects of fault tolerant control are treated for the first time in a single book from a common viewpoint **Robotic Welding, Intelligence and Automation** Tzyh-Jong Tarn, Shan-Ben Chen, Changjiu Zhou, 2004-03-10 This research report brings together present trends in advanced welding robots robotic welding artificial intelligent and automatic welding It includes important technical subjects on welding robots such as intelligent technologies and systems and design and analysis Modeling identification and control of the welding process are presented as well as knowledge based systems for welding and tele robotic welding Other topics covered are sensing and data fusion computer vision and virtual reality applications of the welding process An overview of intelligent and flexible manufacturing systems is given in addition to artificial intelligent technologies for industrial processes **Bifurcation Control** Guanrong Chen, David John Hill, Xinghuo Yu, 2003-08-26 Bifurcation control refers to the task of designing a controller that can modify the bifurcation properties of a given nonlinear system so as to achieve some desirable dynamical behaviors There exists no similar control theory oriented book available in the market that is devoted to the subject of bifurcation control written by control engineers for control engineers World renowned leading experts in the field provide their state of the art survey about the extensive research that has been done over the last few years in this subject The book is not only aimed at active researchers in the field of bifurcation control and its applications but also at a general audience in related fields **Discrete Event Systems 2004 (WODES'04)** Janan Zaytoon, 2005-12-22 Approx 484 pages **Advances in Communication Control Networks** Sophie Tarbouriech, Chaouki T. Abdallah, John Chiasson, 2004-09-22 The area of communication and computer networks has become a very active field of research by the control systems community in the last years Tools from convex optimization and control theory are playing increasing roles in efficient network utilization fair resource allocation

and communication delay accommodation and the field of Networked Control systems is fast becoming a mainstay of control systems research and applications This carefully edited book brings together solicited contributions from experts in the various areas of communication control networks referring to both networks under control control in networks as well as networked control systems control over networks The aim of this book is to reverse the trend of fragmentation and specialization in Communication Control Networks connecting various interdisciplinary research fields including control communication applied mathematics and computer science **Chaos Control** Guanrong Chen,Xinghuo Yu,2003-07-25 Chaos control refers to purposefully manipulating chaotic dynamical behaviors of some complex nonlinear systems There exists no similar control theory oriented book available in the market that is devoted to the subject of chaos control written by control engineers for control engineers World renowned leading experts in the field provide their state of the art survey about the extensive research that has been done over the last few years in this subject The new technology of chaos control has major impact on novel engineering applications such as telecommunications power systems liquid mixing internet technology high performance circuits and devices biological systems modeling like the brain and the heart and decision making The book is not only aimed at active researchers in the field of chaos control involving control and systems engineers theoretical and experimental physicists and applied mathematicians but also at a general audience in related fields

Identification of Nonlinear Systems Using Neural Networks and Polynomial Models Andrzej Janczak,2004-11-18 This monograph systematically presents the existing identification methods of nonlinear systems using the block oriented approach It surveys various known approaches to the identification of Wiener and Hammerstein systems which are applicable to both neural network and polynomial models The book gives a comparative study of their gradient approximation accuracy computational complexity and convergence rates and furthermore presents some new and original methods concerning the model parameter adjusting with gradient based techniques Identification of Nonlinear Systems Using Neural Networks and Polynomial Models is useful for researchers engineers and graduate students in nonlinear systems and neural network theory Applications and Innovations in Intelligent Systems XII Ann Macintosh,Richard Ellis,Tony Allen,2007-12-31 A L Macintosh Napier University UK The papers in this volume are the refereed application papers presented at ES2004 the Twenty fourth SGAI International Conference on Innovative Techniques and Applications of Artificial Intelligence held in Cambridge in December 2004 The conference was organised by SGAI the British Computer Society Specialist Group on Artificial Intelligence This volume contains twenty refereed papers which present the innovative application of a range of AI techniques in a number of subject domains This year the papers are divided into sections on Synthesis and Prediction Scheduling and Search Diagnosis and Monitoring Classification and Design and Analysis and Evaluation This year s prize for the best refereed application paper which is being sponsored by the Department of Trade and Industry was won by a paper entitled A Case Based Technique for Tracking Concept Drift in Spam Filtering The authors are
