Milgen,P. Faverdin,N. Friggens,2011-05-02 For more than 30 years modelling has been an important method for integrating  
in a flexible comprehensive and widely applicable way basic knowledge and biological concepts on digestion and metabolism  
in farm animals The purpose of this book is to present the state of art in this area The chapters are written by leading teams  
and researchers in this field of study mainly from Europe North America and Australasia Considerable progress has been  
made in topics dealing with modelling methods feeding behaviour digestion and metabolic processes in ruminants and  
monogastric animals This progress is clearly illustrated by the emergence of a new paradigm in animal nutrition which has  
moved from the aim to cover the requirements of the animal to explaining and predicting the responses of the animals to  
diets e g productivity and efficiency impact on quality of products environmental aspects health and well being In this book  
several chapters illustrate that through empirical models meta analysis is an efficient tool to synthesize information gathered  
over recent decades In addition compared with other books on modelling farm animal nutrition two new aspects received  
particular attention expanding knowledge of the individual animal to understanding the functioning and management of  
herds and the consideration of the environmental impact of animal production This book is a valuable source of information  
for researchers nutritionists advisors and graduate students who want to have up to date and concise information on  
mathematical modelling applied to farm animals      Managing Healthy Livestock Production and Consumption Nadia  
El-Hage Scialabba,2021-12-02 Managing Healthy Livestock Production and Consumption is a highly interdisciplinary  
resource based on scientific and empirical evidence It is illustrated with best practices of low input livestock systems from  
different continents and offers predictive modelling alternatives for a more resilient future By addressing gaps of knowledge  
and presenting scientific perspective studies of livestock s impact on the environment and the global food supply up to 2050  
this book is useful for those advocating for sustainable food systems Existing evidence of the effects of livestock production  
on food quality and nutrition is reviewed Livestock production and consumption is a highly diverse topic where current  
publications only include focus a single aspect of the issues for example greenhouse gas emissions or health impacts leading  
to unilateral decisions such as refraining from meat consumption However animals are necessary to soil fertility and

ecosystems balance and a more realistic resource is necessary for researchers scientists and policy makers This book clarifies perceptions by presenting sound scientific evidence across livestock landscapes for the scientific community to better appreciate the ecological web of life and the social web of community related to livestock production An edited work written by globally diverse scientists and practitioners including field workers technicians and policy makers this is a valuable resource for researchers teachers and development agents working in the area of sustainable livestock production and consumption of animal source foods National international organizations policy makers and donors interested in sustainable development of the livestock sector will also find the information here practical and applicable Describes the public health impacts of sustainable diets and livestock products Presents the impacts of livestock production on the environment and food supply Explores future scenarios up to 2050 of low input livestock systems Includes current case studies of low input livestock systems that offer potential for scaling up and replication for sustainable livestock futures
