Models & Methods for Project Selection Samuel B. Graves, Jeffrey L. Ringuest, 2012-12-06 Models Methods for Project Selection systematically examines in this book treatment the latest work in the field of project selection modeling The models presented are drawn from mathematical programming decision theory and finance These models are examined in two categorical streams the management science stream and the financial model stream The book describes the assumptions and limitations of each model and provides appropriate solution methodologies Its organization follows three main themes Criteria for Choice Chapters 1 3 investigate the effect of the choice of optimization criteria on the results of the portfolio optimization problem Risk and Uncertainty Chapters 4 7 deal with uncertainty in the project selection problem Non Linearity and Interdependence These chapters deal with problems of non linearity and interdependence as they arise in the project selection problem Chapters 8 9 and 10 present solution methodologies which can be used to solve these most general project selection models

Models & Methods for Project Selection Samuel B. Graves, Jeffrey L. Ringuest, Andrés L. Medaglia, 2003 Models Methods for Project Selection systematically examines in this book treatment the latest work in the field of project selection modeling The models presented are drawn from mathematical programming decision theory and finance These models are examined in two categorical streams the management science stream and the financial model stream The book describes the assumptions and limitations of each model and provides appropriate solution methodologies Its organization follows three main themes Criteria for Choice Chapters 1 3 investigate the effect of the choice of optimization criteria on the results of the portfolio optimization problem This group of chapters examines the multiobjective linear programming approach discusses the appropriate methods for adjusting for time and risk in the project selection problem and expands on the discussion of optimization models and NPV Risk and Uncertainty Chapters 4 7 deal with uncertainty in the project selection problem The models developed in this section are based on probability distribution assumptions or estimates and deal with uncertainty in some aspect of the project selection model Non Linearity and

Interdependence These chapters deal with problems of non linearity and interdependence as they arise in the project selection problem The ability to handle non linear problems allows the application of the methodology to a far wider range of problems Similarly the ability to model interdependence between projects as in the Information Technology models is an important step in generalization Chapters 8 9 and 10 present solution methodologies which can be used to solve these most general project selection models *Multiple Criteria Decision Analysis: State of the Art Surveys* Salvatore Greco,2006-01-20 Multiple Criteria Decision Analysis State of the Art Surveys provides survey articles and references of the seminal or state of the art research on MCDA The material covered ranges from the foundations of MCDA over various MCDA methodologies outranking methods multiattribute utility and value theories non classical approaches to multiobjective mathematical programming MCDA applications and software This vast amount of material is organized in 8 parts with a total of 25 chapters More than 2000 references are listed **The Practice of Supply Chain Management: Where Theory and Application Converge** Terry P. Harrison,Hau L. Lee,John J. Neale,2006-04-11 For over a decade there has been an increasing interest in the use of supply chain methods to improve performance across the entire business enterprise Numerous industries have recognized the importance of efficient supply chain integration and as a result supply chain management has become a standard part of business practice The Practice of Supply Chain Management Where Theory and Application Converge is a must have volume for users of supply chain management methods supply chain management researchers and students in supply chain management The objective of the book is to provide an overview of this important practice research cycle and it is organized into three sections Core Concepts and Practices Emerging Supply Chain Practices and Supply Chain in Action The focus of the book is on supply chain practice but supply chain practice that has been heavily influenced by supply chain research It is this synergy between research and practice that continues to simulate new directions for research *Logic and Integer Programming* H. Paul Williams,2009-04-09 Paul Williams a leading authority on modeling in integer programming has written a concise readable introduction to the science and art of using modeling in logic for integer programming Written for graduate and postgraduate students as well as academics and practitioners the book is divided into four chapters that all avoid the typical format of definitions theorems and proofs and instead introduce concepts and results within the text through examples References are given at the end of each chapter to the more mathematical papers and texts on the subject and exercises are included to reinforce and expand on the material in the chapter Methods of solving with both logic and IP are given and their connections are described Applications in diverse fields are discussed and Williams shows how IP models can be expressed as satisfiability problems and solved as such *Design and Analysis of Simulation Experiments* Jack P.C. Kleijnen,2007-11-15 Simulation is a widely used methodology in all Applied Science disciplines This textbook focuses on this crucial phase in the overall process of applying simulation and includes the best of both classic and modern methods of simulation experimentation This book will be the standard reference book on the

topic for both researchers and sophisticated practitioners and it will be used as a textbook in courses or seminars focusing on this topic Throughput Optimization in Robotic Cells Milind W. Dawande,H. Neil Geismar,Suresh P. Sethi,Chelliah

Sriskandarajah,2007-05-04 Throughput Optimization In Robotic Cells provides practitioners researchers and students with up to date algorithmic results on sequencing of robot moves and scheduling of parts in robotic cells It brings together the structural results developed over the last 25 years for the various realistic models of robotic cells This book is ideally suited for use in a graduate course or a research seminar on robotic cells Handbook of Quantitative Supply Chain Analysis

David Simchi-Levi,S. David Wu,Zuo-Jun Max Shen,2004-05-31 About quantitative supply chain analysis in the electronic business environment **An Annotated Timeline of Operations Research** Saul I. Gass,Arjang A. Assad,2007-02-15 An

Annotated Timeline of Operations Research An Informal History recounts the evolution of Operations Research OR as a new science the science of decision making Arising from the urgent operational issues of World War II the philosophy and methodology of OR has permeated the resolution of decision problems in business industry and government The Timeline chronicles the history of OR in the form of self contained expository entries Each entry presents a concise explanation of the events and people under discussion and provides key sources where further relevant information can be obtained In addition books and papers that have influenced the development of OR or helped to educate the first generations of OR academics and practitioners are cited throughout the book Starting in 1564 with seminal ideas that form the precursors of OR the Timeline traces the key ideas and events of OR through 2004 The Timeline should interest anyone involved in OR researchers practitioners academics and especially students who wish to learn how OR came into being Further the scope and expository style of the Timeline should make it of value to the general reader interested in the development of science and technology in the last half of the twentieth century **Analysis and Modeling of Manufacturing Systems** Stanley B. Gershwin,Yves

Dallery,Chrisoleon T. Papadopoulos,J. MacGregor Smith,2012-12-06 Analysis and Modeling of Manufacturing Systems is a set of papers on some of the newest research and applications of mathematical and computational techniques to manufacturing systems and supply chains These papers deal with fundamental questions how to predict factory performance how to operate production systems and explicitly treat the stochastic nature of failures operation times demand and other important events Analysis and Modeling of Manufacturing Systems will be of interest to readers with a strong background in operations research including researchers and mathematically sophisticated practitioners **To Queue or Not to Queue**

Refael Hassin,Moshe Haviv,2012-12-06 The literature on equilibrium behavior of customers and servers in queuing systems is rich However there is no comprehensive survey of this field Moreover what has been published lacks continuity and leaves many issues uncovered One of the main goals of this book is to review the existing literature under one cover Other goals are to edit the known results in a unified manner classify them and identify where and how they relate to each other and fill in some gaps with new results In some areas we explicitly mention open problems We hope that this survey will motivate

further research and enable researchers to identify important open problems The models described in this book have numerous applications Many examples can be found in the cited papers but we have chosen not to include applications in the book Many of the ideas described in this book are special cases of general principles in Economics and Game Theory We often cite references that contain more general treatment of a subject but we do not go into the details we have highlighted the results For each topic covered in the book that in our opinion are the most important We also present a brief discussion of related results The content of each chapter is briefly described below Chapter 1 is an introduction It contains basic definitions models and solution concepts which will be used frequently throughout the book
