**Research Awards Index** ,1989 States of Consciousness Andrzej Kokoszka,2007-10-25 Consciousness has always been a particularly elusive concept and one vigorously argued in the scientific community This new volume takes on the task of defining normal and altered consciousness in their most relevant clinical terms In *States of Consciousness* Andrzej Kokoszka expands on the pioneering work of J H Jackson offering

contemporary models for studying consciousness as it applies to both pathology and normal altered states e g relaxation sleep meditation and hypnosis He makes clear distinctions between the neuroscientific and psychiatric components of consciousness at the same time his theories are rooted firmly in the biopsychosocial approach Highlights of the coverage Historical overview of studies of consciousness and its altered states Evolutionary dynamic model of consciousness and information processing based on the structure and principles of cell behavior Comparison of altered states of consciousness in healthy persons and patients with schizophrenia New perspectives on the role of consciousness in pathology Case illustration of altered states in a patient with Posttraumatic Stress Disorder integrating neurobiological cognitive behavioral and psychodynamic data Applications of the model in clinical practice States of Consciousness lends itself to theoretical and practical research and classroom use It is relevant to a range of scientists and practitioners in cognition clinical psychology social psychology and neuropsychology The book s scope and the author s attention to detail make it a work of great versatility much like consciousness itself

*Animal Models of Depression* KOOB,EHLERS,KUPFER,2012-12-06 Animal models represent experimental investigations developed in one species for the purpose of studying phenomena in another species and provide numerous advantages for preclinical research They allow scientists greater control and isolation of important experimental variables Animal models are safe reproducible strategies by which to evaluate and design new pharmacological treatment strategies while also allowing direct central nervous system intervention to alter the course of the aberrant behavior Animal models have been developed for a number of mental illnesses in this particular domain they hold the promise to shed light on the still obscure etiologies of these illnesses and ultimately to facilitate the development and testing of cures Yet true models of mental illness are difficult to develop because mental illness may be a uniquely human phenomenon It was based on these considerations that the MacArthur Foundation Research Network on the Psychobiology of Depression set out to sponsor a conference to review the status problems promises and relevance of animal models to the clinical conditions of affective disorders The conference was held in September 1986 and included participants from both within the Network as well as scientists and scholars from various disciplines relevant to the concerns of the conference After the conference was held it became clear to the organizers that the material presented could be helpful to a broader field of investigators since a significant portion of the information has not been presented elsewhere or in the unified context of a monograph

their challenges animal experimental research of stress is a particularly difficult but meaningful task This book provides succinct and relevant summaries of progress in the area of assessing stress response and the conditions contributing to it
