Models for the Perception of Speech and Visual Form Weiant Wathen-Dunn,1967 **Models for the Perception of Speech and Visual Form** ,1970 *Models for the perception of speech and visual form : proceedings of a symposium, Boston, Massachusetts, November 11-14, 1964* Weiant Wathen-Dunn,1967 **Models For The Perception Of Speech And Visual Form (proc.)boston,11-14 Nov.1964** Vathen Weiant, Perceiving Visual Texture Ronald M. Pickett,1968 The visual perception of texture is introduced as a research problem important in itself but important also as an entrance into the broader and little understood area of complex pattern perception Definitions of texture both from a substantive and an abstract standpoint are presented and followed by discussions of 1 the information carried in textures and 2 the possible functions of texture perception in visually controlled behavior Then a review of laboratory and field studies is presented followed by a discussion of directions for future research A functional theory of pattern perception is assumed in which the processing of substantive information in optical patterns is emphasized The application of man s natural visual capacities is proposed for scientific imagery analysis Techniques are suggested for presenting the imagery in an ecologically relevant context of substantive analysis and description Author **Models for the perception of speech and visual form** Weiant Wathen-Dunn,1970 **Models for the Perception of Speech and Visual Form** Data Sciences Laboratory: Air Force Cambridge Research Laboratories (Boston, Mass.),Weiant Wathen-Dunn,1967 **The MIT Encyclopedia of Communication Disorders** Raymond D. Kent,2004 A major new reference work with entries covering the entire field of communication and speech disorders **Picture Processing and Psychopictorics** B.S. Lipkin,1970-01-01 **Picture Processing and Psychopictorics** explores the selected aspects of perception and picture processing involving variables that are relevant to psychopictoric research This book is organized into four parts encompassing 18 chapters The first three parts cover the three classes of psychophysical variables namely contrast and border shape and geometry and texture These parts also deal with the factors that influence the detection of objects in complex images The discussion then shifts to the role of these factors in perception as well as the computer analysis and manipulation of images with respect to these factors The fourth part describes the programming systems for online experimental design and image manipulation This work will be of great value to psychologists concerned with determining how the human extracts information from visual stimuli and to computer scientist concerned with developing programs and equipment to extract similar information from images

Language Development and Neurological Theory Sidney J. Segalowitz,Frederic A. Gruber,2014-05-10 **Language Development and Neurological Theory** presents a neuropsychological theory of language development The discussions are organized around the following themes cerebral specialization for language in normal and brain damaged individuals development of cerebral dominance and speech perception Much emphasis is placed on the issue of cerebral specialization or lateralization Comprised of 20 chapters this volume begins with a review of some of the methods used to correlate

neurophysiological and behavioral functions as well as some of the issues involved in trying to unite the empirical science of neuropsychology and the rationalist science of linguistics The next chapter deals with lateralization for speech sounds shown by young infants and possible factors in the sound signal responsible for the differentiation Subsequent chapters focus on asymmetries in young children during continuous verbal nonvisual and visual nonverbal story tasks the effects of multi language elementary school program on the degree of lateralization for language intramodal and cross modal pattern perception in stroke patients with lateralized lesions and visual half field asymmetries in deaf and hearing children Several hypotheses as to why language is lateralized to the left hemisphere rather than to the right are also examined This book is addressed to researchers and students of the neuropsychology of language whether they call themselves psychologists neuropsychologists neurologists or linguists **Models for the Perception of Speech and Visual Form** W.

Wathen-Dunn,1967 **Vowel Perception and Production** B. S. Rosner,J. B. Pickering,1994-07-21 The last 50 years have witnessed a rapid growth in the understanding of the articulation and the acoustics of vowels Contemporary theories of speech perception have concentrated on consonant perception and this volume is intended as a balance to such bias The authors propose a computational theory of auditory vowel perception accounting for vowel identification in the face of acoustic differences between speakers and speaking rate and stress This work lays the foundation for future experimental and computational studies of vowel perception **The Making of a Neuromorphic Visual System** Christoph

Rasche,2005-12-06 This book presents an approach to the construction of a visual system which is behaviorally computationally and neurally motivated The goal is to characterize the process of visual categorization and to find a suitable representation format that can successfully deal with the structural variability existent within visual categories The book reviews past and existent theories of visual object and shape recognition in the fields of computer vision neuroscience and psychology The entire range of computations is discussed as are region based approaches and are modeled with wave propagating networks A completely novel shape recognition architecture is proposed that can recognize simple shapes under various degraded conditions It is discussed how such networks can be used for constructing basic level object representations It is envisioned how those networks can be implemented using the method of neuromorphic engineering

Models for the Perceptions of Speech and Visual Form Weiant Walthen-Dunn,1967 Models for the Perception of Speech and Visual Form. Proceedings of a Symposium Sponsored by the Data Science Laboratory ... November 11-14, 1964 Massachusetts Institute of Technology. Air Force Cambridge Research Laboratories. Data Science Laboratory,Weiant Wathen Dunn,1967 Cognitive Theory F. Restle,2018-12-07 First published in 1982 This book contains the content of the Indiana Conference of 1974 This Conference has met for each of the last seven years At one time it was known as the Midwestern Mathematical Psychology Meeting but as interest drifted toward more experimental and theoretical but less purely mathematical work the title became the Indiana Theoretical and Cognitive Psychology Meetings The contributors to this

Conference were requested to emphasize the relatively broad theoretical significance of their work to incorporate the work of others and if they were willing to speculate about future developments

The Human Auditory Cortex David Poeppel, Tobias Overath, Arthur Popper, Richard R. Fay, 2012-04-12 We live in a complex and dynamically changing acoustic environment To this end the auditory cortex of humans has developed the ability to process a remarkable amount of diverse acoustic information with apparent ease In fact a phylogenetic comparison of auditory systems reveals that human auditory association cortex in particular has undergone extensive changes relative to that of other species although our knowledge of this remains incomplete In contrast to other senses human auditory cortex receives input that is highly pre processed in a number of sub cortical structures this suggests that even primary auditory cortex already performs quite complex analyses At the same time much of the functional role of the various sub areas in human auditory cortex is still relatively unknown and a more sophisticated understanding is only now emerging through the use of contemporary electrophysiological and neuroimaging techniques The integration of results across the various techniques signify a new era in our knowledge of how human auditory cortex forms basis for auditory experience This volume on human auditory cortex will have two major parts In Part A the principal methodologies currently used to investigate human auditory cortex will be discussed Each chapter will first outline how the methodology is used in auditory neuroscience highlighting the challenges of obtaining data from human auditory cortex second each methods chapter will provide two or at most three brief examples of how it has been used to generate a major result about auditory processing In Part B the central questions for auditory processing in human auditory cortex are covered Each chapter can draw on all the methods introduced in Part A but will focus on a major computational challenge the system has to solve This volume will constitute an important contemporary reference work on human auditory cortex Arguably this will be the first and most focused book on this critical neurological structure The combination of different methodological and experimental approaches as well as a diverse range of aspects of human auditory perception ensures that this volume will inspire novel insights and spurn future research
