*Models of Understanding Text* Bruce K. Britton, Arthur C. Graesser, 1996 First Published in 1995 Routledge is an imprint of Taylor Francis an informa company      *Models of Understanding Text* Bruce K. Britton, Arthur C. Graesser, 2014-02-25 What is text understanding It is the dynamic process of constructing coherent representations and inferences at multiple levels of text and context within the bottleneck of a limited capacity working memory The field of text and discourse has advanced to the point where researchers have developed sophisticated models of comprehension and identified the particular assumptions that underlie comprehension mechanisms in precise analytical or mathematical detail The models offer a priori predictions about thought and behavior not merely ad hoc descriptions of data Indeed the field has evolved to a mature science The contributors to this volume collectively cover the major models of comprehension in the field of text and discourse Other books are either narrow covering only a single theoretical framework or do not focus on systematic modeling efforts In addition this book focuses on deep levels of understanding rather than language codes syntax and other shallower levels of text analysis As such it provides readers with up to date information on current psychological models specified in quantitative or analytical detail      *Working with Text and Around Text in Foreign Language Environments* Halina Chodkiewicz, Piotr Steinbrich, Małgorzata Krzemińska-Adamek, 2016-06-28 This book investigates the three pivotal points of text for foreign language acquisition reception construction and deconstruction In Part One the focus is on various aspects of text reception such as developing literacy text interest and perceptions of the academic register or the assessment of spoken language in educational contexts Part Two deals with various aspects of composing text such as author identity lexical constructs or collaborative web based writing Lastly Part Three presents the various segmental items that constitute text like lexical clustering L1 L2 relationship classroom talk as text etc The division corresponds with what can be viewed as a logical sequence of text related processes reflected in formal learning and teaching environments      *Handbook of Research on Reading Comprehension* Susan E. Israel, Gerald G. Duffy, 2014-06-03 Researchers of reading comprehension literacy educational psychology psychology and neuroscience are brought together for this handbook to document and summarize the current body of research on theory methods instruction and assessment in reading comprehension      *Narrative Comprehension, Causality, and Coherence* Susan R. Goldman, Arthur C. Graesser, Paul van den Broek, 1999-08 This volume provides an excellent overview of the field of discourse processes capturing both its breadth and its depth World renowned researchers present the latest theoretical developments and thought provoking empirical data In doing so they cover a broad range of communicative activities including text comprehension conversational communication argumentation television or media viewing and more A central theme across all chapters concerns the notion that coherence determines the interpretation of the communication The various chapters illustrate the many forms that coherence can take and explore its role in different communicative settings      **Handbook of Discourse Processes** Arthur C. Graesser, Morton Ann

Gernsbacher, Susan R. Goldman, 2003-04-02 This Handbook is a comprehensive overview of the multidisciplinary field of discourse processes. The editors hope to foster a more interdisciplinary approach to discourse processing with this Handbook while simultaneously developing an appreciation within the field for multiple methods of establishing rigorous scientific claims. The field of discourse processes is currently fueled by seven dominant approaches: discourse psychology, corpus analysis, computational discourse, discourse technologies, conversation analysis, hybrid qualitative and quantitative approaches, and cultural foundations. The contributors also discuss future trends in research, including corpus analyses, the integration of neuroscience with discourse research, and the development of more advanced computer technologies for analyzing discourse.
