Imagery and Spatial Cognition Tomaso Vecchi, Gabriella Bottini, 2006-08-22 The relationships between perception and imagery imagery and spatial processes memory and action these are the main themes of this text The interest in experimental psychology and cognitive neuroscience on imagery and spatial cognition has remarkably increased in the last decades Different areas of research contribute to the clarification of the multiple cognitive processes subserving spatial perception and exploration and to the definition of the neurophysiological mechanisms underpinning these cognitive functions The aim of this book is to provide the reader post graduate students as well as experts with a complete overview of this field of research It illustrates how brain behaviour and cognition interact in normal and pathological subjects in perceiving representing and exploring space Series B

From Mental Imagery to Spatial Cognition and Language Michel Denis, 2012 Reviewing the state of the art research in the field of imagery visuo spatial memory spatial representation

and language with special emphasis on their interactions the volume addresses the issues in depth presenting new evidence through contributions from both behavioural and neuroimaging studies Mental Models and the Mind Carsten Held, Gottfried M-GV Vosgerau, Markus Knauff, 2006-01-11 Cognitive psychology cognitive neuroscience and philosophy of mind are names for three very different scientific fields but they label aspects of the same scientific goal to understand the nature of mental phenomena Today the three disciplines strongly overlap under the roof of the cognitive sciences The book's purpose is to present views from the different disciplines on one of the central theories in cognitive science the theory of mental models Cognitive psychologists report their research on the representation and processing of mental models in human memory Cognitive neuroscientists demonstrate how the brain processes visual and spatial mental models and which neural processes underlie visual and spatial thinking Philosophers report their ideas about the role of mental models in relation to perception emotion representation and intentionality The single articles have different and mutually complementing goals to introduce new empirical methods and approaches to report new experimental results and to locate competing approaches for their interpretation in the cross disciplinary debate The book is strongly interdisciplinary in character It is especially addressed to researchers in any field related to mental models theory as both a reference book and an overview of present research on the topic in other disciplines However it is also an ideal reader for a specialized graduate course Examines the theory of mental models from the perspectives of cognitive psychology cognitive neuroscience and philosophy of the mind Introduces new empirical methods experimental results and interdisciplinary yet complementary approaches Serves as a reference book and an overview of current research **Generative Mental Processes and Cognitive Resources** U. Hecker, Stefan Dutke, Grzegorz Sedek, 2012-12-06 In recent years a booming research interest has been observed in linking basic cognitive processes with a variety of social and clinical phenomena Evidence comes from the increasing popularity of psychological paradigms such as social cognition cognitive psychopathology or cognitive aging What links those paradigms is their special focus on explaining cognitive phenomena by use of the concept of mental resources Immediate reasons for such a focus are found in the growing emphasis on understanding everyday dynamics of thinking and acting within a complex world as well as within personal constraints Obviously our current goals and choice of activities constrain and influence our reasoning as well as the processes of input to and retrieval from memory Situational demands will act to the same effect and the interplay between both internal and external constraints makes apparent a first and straightforward relevance of the resource notion in action oriented cognitive research For example person perception is a dynamic process depending on what my goals in perception are what the perceiving situation is that I find myself in and how complex the target characteristics are In fact the amount of resources spent in this process may be reflected in its speed the quality of the perceptual or mnemonic trace which is being created or the kind of social or non social behavior that can be supported **Handbook of Individual Differences in Cognition** Aleksandra Gruszka, Gerald Matthews, Blazej

Szymura,2010-06-16 As cognitive models of behavior continue to evolve the mechanics of cognitive exceptionalism with its range of individual variations in abilities and performance remains a challenge to psychology Reaching beyond the standard view of exceptional cognition equating superior intelligence the Handbook of Individual Differences in Cognition examines the latest findings from psychobiology cognitive psychology and neuroscience for a comprehensive state of the art volume Breaking down cognition in terms of attentional mechanisms working memory and higher order processing contributors discuss general models of cognition and personality Chapter authors build on this foundation as they revisit current theory in such areas as processing effort and general arousal and examine emerging methods in individual differences research including new data on the role of brain plasticity in cognitive function The possibility of a unified theory of individual differences in cognitive ability and the extent to which these variables may account for real world competencies are emphasized and commentary chapters offer suggestions for further research priorities Coverage highlights include The relationship between cognition and temperamental traits The development of autobiographical memory Anxiety and attentional control The neurophysiology of gender differences in cognitive ability Intelligence and cognitive control Individual differences in dual task coordination The effects of subclinical depression on attention memory and reasoning Mood as a shaper of information Researchers clinicians and graduate students in psychology and cognitive sciences including clinical psychology and neuropsychology personality and social psychology neuroscience and education will find the Handbook of Individual Differences in Cognition an expert guide to the field as it currently stands and to its agenda for the future

Cognitive Linguistics Investigations June Luchjenbroers,2006-06-01 The total body of papers presented in this volume captures research across a variety of languages and language groups to show how particular elements of linguistic description draw on otherwise separate aspects or fields of linguistic investigation As such this volume captures a diversity of research interest from the field of cognitive linguistics These areas include lexical semantics cognitive grammar metaphor prototypes pragmatics narrative and discourse computational and translation models and are considered within the contexts of language change child language acquisition language and culture grammatical features and word order and gesture Despite possible differences in philosophical approach to the role of language in cognitive tasks these papers are similar in a fundamental way they all share a commitment to the view that human categorization involves mental concepts that have fuzzy boundaries and are culturally and situation based

Imagery Language and Visuo Spatial Thinking discusses the remarkable human ability to use mental imagery in everyday life from helping plan actions and routes to aiding creative thinking from making sense of and remembering our immediate environment to generating pictures in our minds from verbal descriptions of scenes or people The book also considers the important theme of how individuals differ in their ability to use imagery With contributions from leading researchers in the field this book will be of interest to advanced undergraduates postgraduates and researchers in cognitive psychology cognitive science and cognitive neuropsychology

Mental Models in Discourse Processing and Reasoning G. Rickheit, C. Habel, 1999-10-29 In this interdisciplinary discussion on mental models researchers from various areas in cognitive science tackle the following questions What is a mental model What are the prospects and limitations in applying the mental model notion in cognitive science How can the ideas on the nature of mental models and their mode of operation be empirically substantiated The primary goal of the research group was to work out a definition of mental models that embraces the overall use of this construct in cognitive science as well as the more specific conceptions used in particular research domains such as cognitive linguistics Theoretical claims about the properties of mental models were discussed and their tenability evaluated against the empirical evidence The volume is divided into three parts Fundamental aspects of mental models are presented in the first section the following part contains contributions to the function of mental models in discourse processing and finally problems of mental models in reasoning and problem solving are outlined

Representing Space in Cognition Thora Tenbrink, Jan M. Wiener, Christophe Claramunt, 2013-10-31 This book considers how people talk about their environment find their way in new surroundings and plan routes Part I explores the empirical insights gained from research in the cognitive underpinnings of spatial representation in language Part II proposes solutions for capturing such insights formally and in Part III authors discuss how theory is put into practice through spatial assistance systems These three perspectives stem from research disciplines which deal with the spatial domain in different ways and which often remain separate In this book they are combined so as to highlight both the state of the art in the field and the benefit of building bridges between methodologies and disciplines Finding our way and planning routes is relevant to us all this book ultimately helps improve our everyday lives
