empowered by the developments in recent years In his description of the rough and tumble world of postwar Japanese industrial relations Price pays particular attention to the Occupation period the rise of Shunto the increased industrial conflict prior to 1975 and the transition to generalized labor management cooperation Relying on French regulation theory and on Michael Burawoy's concept of production regimes Price suggests a revisionist interpretation of the transformation of Japan's political economy offering new insights into the rise of lean production and the quality movement in Japan

strategic innovations in production and manufacturing management The encyclopedia consists of articles of varying lengths The longer articles on important concepts and practices range from five to fifteen pages There are about 100 such articles written by nearly 100 authors from around the world In addition there are over 1000 shorter entries on concepts practices and principles The range of topics and depth of coverage is intended to suit both student and professional audiences The shorter entries provide digests of unfamiliar and complicated subjects Difficult subjects are made intelligible to the reader without oversimplification The strategic and technological perspectives on various topics give this Encyclopedia its distinctiveness and uniqueness The world of manufacturing today is increasingly competitive It is apparent that manufacturers must respond to these competitive pressures with technical and strategic innovation This encyclopedia has been developed to help researchers students and those in the manufacturing industry to understand and implement these ongoing changes in the field
