Modern Matters Principles Practice In Conserving Recent Architecture:

Conservation of Modern Architecture Susan Macdonald, Kyle C. Normandin, Bob Kindred, 2015-12-08 The importance of protecting significant buildings from decay and destruction would seem to be undeniable Yet whilst the majority of buildings of merit constructed before the Second World War have been highlighted as worthy of protection there is much indifference and in some cases hostility towards many important post war buildings These deserve to receive wider formal recognition but in many cases continue to be mistreated or even demolished This book examines many of the philosophical and practical issues surrounding the conservation of modern buildings and also the problems faced by building practitioners in dealing with buildings constructed in a wider range of styles and materials than at any other time Climate change in particular has forced change in the way in which we think about buildings with the pressures to address issues of energy efficiency becoming more urgent and likely to have consequences that may alter the perceived architectural and historic interest of modern and traditional buildings alike Modern Matters English Heritage, 1996 The contributions to this book consider recent developments in the protection and care of twentieth century buildings and examines the philosophical methodological and practical problems associated with conserving our recent past Part I discusses philosophy protection and management Part II investigates the progress that has been made in dealing with the practical issues of conserving modern buildings with special attention given to common materials such as concrete and metal windows A selection of international case studies provide useful examples of the problems that may be encountered **Matter, Materiality and Modern Culture** Paul Graves-Brown, 2012-11-12 Matter Materiality and Modern Culture offers a new approach to the study of contemporary objects to give the reader a new understanding of the relationship between people and their material world It asks how the very stuff of our world has shaped our societies by addressing a broad array of questions including why do Berliners have such strange door keys should the Isle of Wight pop festival be preserved could aliens tell a snail shell from a waste paper basket why did Victorian England make so much of death and burial **Architectural Conservation in Europe and the Americas** John H. Stubbs, Emily G. Makaš, 2011-05-04 From such well known and long vexed sites as the Athenian Acropolis to more contemporary locales like the Space Age Modernist capital city of Brasilia the conflicting and not always neatly resolvable forces that bear upon preservation are addressed as clearly and thoughtfully as the general reader could hope for New York Review of Books an astonishing feat of research compilation and synthesis Context The book delivers the first major survey concerning the conservation of cultural heritage in both Europe and the Americas Architectural Conservation in Europe and the Americas serves as a convenient resource for professionals students and anyone interested in the field Following the acclaimed Time Honored this book presents contemporary practice on a country by country and region by region basis facilitating comparative analysis of similarities and differences The book stresses solutions in architectural heritage protection and the contexts in which they were developed *Building Conservation*

Philosophy John Earl, Andrew Saint, 2015-12-08 This is a book about ideas rather than techniques Public thirst for visible evidence of the past is not as it is often represented a recent phenomenon It was already well developed when an overseer of ancient monuments was appointed in sixth century Rome But if the desire to preserve aspects of the past is to do more than respond to popular whims and fashions or represent the personal views of ivory towered scholars and specialists it needs to have some kind of solid logical basis Philosophical questions are raised at every turn On what basis can buildings be singled out as historic buildings demanding special protection On what authority can we justify interfering with private property rights in pursuing such protective processes And how should we judge what is acceptable and unacceptable in the treatment of the buildings we value In this third substantially revised edition the author examines the nature of monuments and the varied motives for preserving them He traces the history of movements to preserve old buildings and the furious conflicts that have frequently surrounded restoration campaigns Philosophical problems arising in modern conservation practice including such controversial issues as skin deep preservation and the use of substitute materials are considered in detail More space is devoted in this edition to contextual issues New sections deal with issues of sustainability and the relationship of buildings to the townscape and landscape The number of illustrations has also been greatly increased The book is designed especially for students approaching the subject for the first time but may well be found stimulating by practitioners No easy formulae are offered What conservators have to nurture the author insists is an inquiring and self critical frame of mind enabling them to proceed from comprehensive knowledge of the buildings for the time being in their care via logical argument to defensible if not inevitable solutions

Engaging with Heritage and Historic Environment Policy Hana

Morel, Michael Dawson, 2021-06-17 A comprehensive review of policy and practice in the historic environment this book exposes the tensions challenges and difficulties faced by the heritage sector at a time of political volatility This collection comes at a key moment for planning policy in the historic environment of England The papers reflect a wide range of views and experience in the practical environment of policy and implementation Contributors give perspectives on both policy and practice from legal counsel to local authorities from the country's largest NGO to the museums sector Some conclusions are controversial providing an important insight into the operation of national and local government The thrust of the volume is the need to close the gap between research and policy production Written when the UK government's White Paper Planning for the Future August 2020 was in preparation the chapters explore the implementation of policy its unexpected and unanticipated outcomes and the enduring legacies of guidance and established practice It highlights tensions within the sector and the need for collaboration and partnership This book is the most recent and comprehensive review of how the heritage sector has evolved and draws special attention to the importance of the historic environment not just in planning policy but for the country as a whole The chapters in this book were originally published in *The Historic Environment Policy Practice*

Routledge Companion to Global Heritage Conservation Vinayak Bharne, Trudi Sandmeier, 2019-02-12 The

act of identifying protecting restoring and reusing buildings districts and built landscapes of historic and cultural significance is at its best a reflective and consequential process of urban and socio economic reform It has the potential to reconcile conflicting memories meanings and cultural tensions bridging and expanding the perceived boundaries of multiple disciplines towards bigger aspirations of city making and social justice How and where do such aspirations overlap and differ across nations and societies across the world In places with different histories governance structures regulatory stringency and populist dispositions who are the specific players and what are the actual processes that bring about bigger and deeper change beyond just the conservation of an architectural or urban entity of perceived value This collection of scholarly articles by theorists academics and practitioners explores the global complexity guises and potential of heritage conservation Going from Tokyo to Cairo Shenzhen to Rome and Delhi to Moscow this volume examines a vast range of topics indigenous habitats urban cores vernacular infrastructure colonial towns squatters burial sites war zones and modern landmarks It surfaces numerous inherent issues water stress deforestation social oppression poverty religion immigration and polity expanding the definitions of heritage conservation as both a professional discipline and socio cultural catalyst This book argues that the intellectual and praxis limits of heritage conservation as the agency of reading defining and intervening with built heritage can be expansive aimed at bigger positive change beyond a specific subject or object plural enmeshed with multiple fields and specializations and empathetic born from the actual socio political realities of a place

Managing Historic Sites and Buildings David Baker, Gill Chitty, 2013-02-01 Managing Historic Sites and Buildings looks at the choices and the tensions that exist in conservation and interpretation of the heritage Preservation and presentation are central activities arguably means and ends in the conservation of the historic environment But are they self reinforcing or do they work against each other In a series of essays which span from prehistoric sacred site to Second World war military remains from medieval monastery to 1970s housing estate we look at contemporary concerns and debates about the way the past is shaped physically and metaphorically by these two aspects of heritage management Starting from the position that the fundamental purpose of the whole process is to communicate understanding about the human past these essays examine how far the ideologies strategies tactics and techniques of preservation and presentation are mutually supportive the success of integrated approaches that are inclusive of social economic and green environmental concerns is understood but the value of developing truly sustainable management for individual historic places is only just becoming evident At the heart of such an approach lies a crucial relationship between the activity of preserving historic places and of promoting understanding of their significance

Concrete Susan Macdonald, 2008-04-15 This book deals with the diagnosis prognosis and repair issues associated with concrete buildings Since the patenting and subsequent large scale manufacture of modern cement in the nineteenth century concrete has become one of the most widely used construction materials in the world Those concerned with building pathology now need to understand problems specifically related to concrete and to identify appropriate

methods of repair and remediation This book brings together experts in the history defect diagnosis remediation and maintenance of concrete It includes case studies from around the world to illustrate the various repair methods available It will provide an invaluable guide for architects building surveyors structural engineers and specialist contractors as well as students of building pathology and conservation

Structural Analysis of Historical Constructions: Anamnesis, Diagnosis, Therapy, Controls Koen Van Balen, Els Verstrynghe, 2016-11-03 Structural Analysis of Historical Constructions Anamnesis diagnosis therapy controls contains the papers presented at the 10th International Conference on Structural Analysis of Historical Constructions SAHC2016 Leuven Belgium 13 15 September 2016 The main theme of the book is Anamnesis Diagnosis Therapy Controls which emphasizes the importance of all steps of a restoration process in order to obtain a thorough understanding of the structural behaviour of built cultural heritage The contributions cover every aspect of the structural analysis of historical constructions such as material characterization structural modelling static and dynamic monitoring non destructive techniques for on site investigation seismic behaviour rehabilitation traditional and innovative repair techniques and case studies The knowledge insights and ideas in Structural Analysis of Historical Constructions Anamnesis diagnosis therapy controls make this book of abstracts and the corresponding digital full colour conference proceedings containing the full papers must have literature for researchers and practitioners involved in the structural analysis of historical constructions

The Challenge of Change: Dealing with the Legacy of the Modern Movement D. van den Heuvel, M. Mesman, W. Quist, 2008-09-11 Conservation of architecture and the conversation of Modern architecture in particular has assumed new challenges Rather than attempting to return a Modern building to its resumed original state the challenge of these proceedings is to revalue the essence of the manifold manifestations of Modern architecture and redefine its meanings in a rapidly changing world of digital revolution worldwide mobility and environmental awareness This volume aims to provide a variety of platforms for the exchange of ideas and experience A large international group of architects historians scholars preservationists and other parties involved in the processes of preserving renovating and transforming Modern buildings has been invited to investigate the paradox of the Modern monument and to reflect on the manifold dilemmas of change and continuity The general theme is elaborated through five sub themes The sub theme Change and Continuity addresses the tensions between change and continuity from a historical theoretical perspective Restructuring Cities and Landscapes focuses on the larger scale of city and landscape while Shifts in Programme and Flexibility draws attention to the scale of the building or building complex and questions limits of re use and flexibility The fourth sub theme deals with education and the fifth sub theme Progress Technology and Sustainability considers specific issues of techniques and materials

History, Performance and Conservation Barry Bridgwood, Lindsay Lennie, 2013-09-13 Ideal for students of architectural technology this volume of the Technologies of Architecture series covers the technologies available and the processes necessary for the conservation of existing buildings and environments This book provides in a single text the tools

for students to be able to evaluate such buildings as well as an extensive understanding of the mechanisms which cause their deterioration and knowledge of the technologies available to correct their status. The ever higher standards set for buildings especially in energy conservation contexts demand that practitioners appreciate how the performance of existing structures can be enhanced which is also covered. Considering the work of conservation within a holistic perspective and historical context this book is additionally invaluable for architecture and construction students.

Structure and Style Michael Stratton, 1997 This book looks at approaches to appraising and conserving mainstream architecture of the 20th century commercial buildings industrial buildings and housing.

Structures and Construction in Historic Building Conservation Michael Forsyth, 2008-04-15 This book is the second in a series of volumes that combine conservation philosophy in the built environment with knowledge of traditional materials and structural and constructional conservation techniques and technology. Understanding Historic Building Conservation Structures Construction in Historic Building Conservation Materials Skills for Historic Building Conservation. The series aims to introduce each aspect of conservation and to provide concise basic and up to date knowledge for architects surveyors and engineers as well as for commissioning client bodies managers and advisors. In each book Michael Forsyth draws together chapters by leading architects structural engineers and related professionals to reflect the interdisciplinary nature of conservation work. The books are structured to be of direct practical application taking the reader through the process of historic building conservation and emphasising throughout the integrative teamwork involved. This present volume Structures Construction in Historic Building Conservation traces the history of structures in various materials and contains guidance on the survey assessment and diagnosis of structures and the integration of building code requirements within the historic fabric. It discusses conservation engineering philosophy exposes the conflict between building codes and conservation legislation and offers solutions. Leading edge on site metric survey techniques are described and a range of structural advice is given including methods of repair in relation to philosophical principles. Causes of induced movement in historic buildings are explained together with basic soil mechanics and the assessment and diagnosis of structural failure. Chapters also cover the conservation of different types of construction masonry iron and steel and concrete and reinforced concrete. Fourteen chapters written by the experts present today's key issues in structures and construction for historic building conservation. The Recovery of Beauty: Arts, Culture, Medicine Corinne Saunders, David Fuller, 2015-08-22 An interdisciplinary collection of essays exploring the complex and conflicted topic of beauty in cultural arts and medicine looking back through the long cultural history of beauty and asking whether it is possible to recover beauty.

Urban Histories in Practice Jeffrey Kruth, Steven Rugare, 2022-09-08 This volume brings together ideas about the material and social transformation of cities by asking what is the relationship between history memory and the contemporary city. The urgency of this question grows in the contexts of rapid urbanization in the Global

South and urban decline in the deindustrializing areas of the Global North Within these spaces multiple disciplines shape our capacity to know the contemporary city The work presented here invites the reader to undertake critical and creative approaches regarding how these disciplines might shape this process ultimately making it more equitable and just Using various methods the contributors engage in critical readings of specific built and discursive legacies in numerous global contexts Differing forms of a social agenda permeate each piece but none is utopian or totalizing Rather the emphasis is on various forms of close reading The authors begin with the city as found and address each context in specific and precise terms The contributions here bring together histories in critical and creative ways while also catalyzing future possibilities In this way these writings frame urban history and morphology discourse not only as arenas for theoretical posturing but also as calls for action

Analysing Buildings from Context to Detail in Time Hielkje Zijlstra, 2009 Technology provided the author of this book with the inspiration to develop a more comprehensive research method to assess buildings Analysing Buildings from Context to Detail in time ABCD Research Method Technology at academic level should be considered in the analysis of a building In this book the focus is on construction engineering the study of the requirements associated with constructing buildings Providing information on practice is a key element in construction engineering which is a learning process Changes are made during the life of a building and they might be made differently if the history and technical aspects of the building were studied in greater detail Both maintenance and changes require us to understand the building concerned *Building Adaptation* James Douglas, 2006-08-11 As existing buildings age nearly half of all construction activity in Britain is related to maintenance refurbishment and conversions Building adaptation is an activity that continues to make a significant contribution to the workload of the construction industry Given its importance to sustainable construction the proportion of adaptation works in relation to new build is likely to remain substantial for the foreseeable future especially in the developed parts of the world Building Adaptation Second Edition is intended as a primer on the physical changes that can affect older properties It demonstrates the general principles techniques and processes needed when existing buildings must undergo alteration conversion extension improvement or refurbishment The publication of the first edition of Building Adaptation reflected the upsurge in refurbishment work The book quickly established itself as one of the core texts for building surveying students and others on undergraduate and postgraduate built environment courses This new edition continues to provide a comprehensive introduction to all the key issues relating to the adaptation of buildings It deals with any work to a building over and above maintenance to change its capacity function or performance

Specifications for Building Conservation Rory Cullen, Rick Meier, 2017-09-19 In Specifications for Building Conservation the National Trust draws on a range of case studies and specifications to provide a much needed guide to specification writing for building conservation Although traditional building accounts for approximately a quarter of all buildings in the UK the old skills and understanding required for their care and maintenance have been increasingly eroded over the last century As the largest

heritage charity in Europe the National Trust has a first class reputation for high standards of conservation and care and in this three volume set the Trust brings together a remarkable pool of expertise to guide conservation professionals and students through the process of successful specification writing This first book focusses on the materials used for the external fabric detailing successful approaches employed by the National Trust at some of their most culturally significant sites A range of studies have been carefully selected for their interest diversity and practicality showcasing projects from stonework repairs on the magnificent Grade I listed Hardwick Hall to the re thatching of the traditional cottages of the Holnicote Estate Complete with a practical Conservation Management Plan checklist this book will enable practitioners to develop their skills allowing them to make informed decisions when working on a range of project types This is the first practical guide to specification writing for building conservation and the advice provided by the National Trust experts will be of interest to any practitioners and students involved in building conservation both in the UK and beyond Profits generated from the sale of this publication will go to the National Trust Building Apprenticeship Scheme This provides placements for traditional skills at National Trust properties

Building Pathology David S. Watt, 2009-05-12 Building pathology provides an interdisciplinary approach to the study of defects and performance in order to develop appropriate remedial and management solutions It considers how the structure and materials of a building relate to its environment its occupants and the way the building is used so as to develop a better understanding of building failures This book provides a well illustrated introduction to the discipline of building pathology bridging the gap between current approaches to the surveying of buildings and the detailed study of defect diagnosis prognosis and remediation It features a number of case studies and a detailed set of references and further reading This second edition has been updated to reflect changes in legislation guidance and construction and provides new case studies that demonstrate the breadth and depth of the subject
