**Modern Alchemy** Mark Morrisson, 2007-04-19 Alchemists are generally held to be the quirky forefathers of science blending occultism with metaphysical pursuits Although many were intelligent and well intentioned thinkers the oft cited goals of alchemy paint these antiquated experiments as wizardry not scientific investigation Whether seeking to produce a miraculous panacea or struggling to transmute lead into gold the alchemists radical goals held little relevance to consequent scientific pursuits Thus the temptation is to view the transition from alchemy to modern science as one that discarded fantastic ideas about philosophers stones and magic potions in exchange for modest yet steady results It has been less noted however that the birth of atomic science actually coincided with an efflorescence of occultism and esoteric religion that attached deep significance to questions about the nature of matter and energy Mark Morrisson challenges the widespread dismissal of alchemy as a largely insignificant historical footnote to science by prying into the revival of alchemy and its influence on the emerging subatomic sciences of the late 19th and early 20th centuries Morrisson demonstrates its surprising influence on the emerging subatomic sciences of the late 19th and early 20th centuries Specifically Morrisson examines the resurfacing of occult circles during this time period and how their interest in alchemical tropes had a substantial and traceable impact upon the science of the day Modern Alchemy chronicles several encounters between occult conceptions of alchemy and the new science describing how academic chemists inspired by the alchemy revival attempted to transmute the elements to make gold Examining scientists publications correspondence talks and laboratory notebooks as well as the writings of occultists alchemical tomes and science fiction stories he argues that during the birth of modern nuclear physics the trajectories of science and occultism so often considered antithetical briefly merged *The Complete Idiot's Guide to Alchemy* Dennis William Hauck, 2008-04-01 More than magic Where else can one combine chemistry and philosophy to turn base metal into gold while discovering a magical elixir to prolong life Here s a simple and straightforward guide to alchemy that explains its basic principles Written by one of the world s few practicing alchemists it s a concise

The Problem of Disenchantment Egil Asprem, 2018-05-31 Challenges the conventional view of a disenchanted and secular modernity and recovers the complex relation that exists between science religion and esotericism in the modern world Max Weber famously characterized the ongoing process of intellectualization and rationalization that separates the natural world from the divine by excluding magic and value from the realm of science and reason and fact from the realm of religion as the disenchantment of the world Egil Asprem argues for a conceptual shift in how we view this key narrative of modernity Instead of a sociohistorical process of disenchantment that produces increasingly rational minds Asprem maintains that the continued presence of magic and enchantment in people s everyday experience of the world created an intellectual problem for those few who were socialized to believe that nature should contain no such incalculable mysteries Drawing on a wide range of early twentieth century primary sources from theoretical physics occultism embryology radioactivity psychical research and other fields Asprem casts the intellectual life of high modernity as a synchronic struggle across conspicuously different fields that shared surprisingly similar intellectual problems about value meaning and the limits of knowledge The Problem of Disenchantment is in its entirety extraordinarily well researched argued and written representing at once the most complete and nuanced treatment of the notion of disenchantment within this network of scientific religious philosophical and esoteric discourses and currents Nova Religio

Centre for Reformation and Renaissance Studies, 2004 The Sciences of Homosexuality in Early Modern Europe Kenneth Borris, George S. Rousseau, 2013-01-11 The Sciences of Homosexuality in Early Modern Europe investigates early modern scientific accounts of same sex desires and the shapes they assumed in everyday life It explores the significance of those representations and interpretations from around 1450 to 1750 long before the term homosexuality was coined and accrued its current range of cultural meanings This collection establishes that efforts to produce scientific explanations for same sex desires and sexual behaviours are not a modern invention but have long been characteristic of European thought The sciences of antiquity had posited various types of same sexual affinities rooted in singular natures These concepts were renewed elaborated and reassessed from the late medieval scientific revival to the early Enlightenment The deviance of such persons seemed outwardly inscribed upon their bodies documented in treatises and case studies It was attributed to diverse inborn causes such as distinctive anatomies or physiologies and embryological astrological or temperamental factors This original book freshly illuminates many of the questions that are current today about the nature of homosexual activity and reveals how the early modern period and its scientific interpretations of same sex relationships are fundamental to understanding the conceptual development of contemporary sexuality The Scientific Revolution Steven Shapin, 2018-11-05 This scholarly and accessible study presents a provocative new reading of the late sixteenth and seventeenth century advances in scientific inquiry Kirkus Reviews In The Scientific Revolution historian Steven Shapin challenges the very idea that any such a revolution ever took place Rejecting the narrative that a new and unifying paradigm suddenly took hold he demonstrates how the conduct of science emerged from a wide array of early modern philosophical agendas political commitments and religious beliefs In this analysis early modern science is shown not as a set of disembodied ideas but as historically situated ways of knowing and doing Shapin shows that every principle identified as the modernizing essence of science whether it's experimentalism mathematical methodology or a mechanical conception of nature was in fact contested by sixteenth and seventeenth century practitioners with equal claims to modernity Shapin argues that this contested legacy is nevertheless rightly understood as the origin of modern science its problems as well as its acknowledged achievements This updated edition includes a new bibliographic essay featuring the latest scholarship An excellent book Anthony Gottlieb New York Times Book Review The Journal of the Alchemical Society, 1913

*Esotericism and Narrative: The Occult Fiction of Charles Williams* Aren Roukema, 2018-05-29 Esotericism and Narrative The Occult Fiction of Charles Williams situates the life and fiction of the Inkling Charles Williams in the network of modern occultism with special focus on his initiatory experiences in A E Waite's Fellowship of the Rosy Cross Aren Roukema evaluates fictional projections of magic kabbalah alchemy and ritual experience in Williams's seven novels of supernatural

fantasy From this specific analysis he develops more broadly applicable approaches to the serious expression of religious experience in fiction Roukema shows that esoteric knowledge has frequently been blurred into fiction because of its inherent narrativity and adaptability particularly by authors already attracted to the syncretism multivalence and lived fantasy of the modern occult experience **Radio-elements as Indicators** Fritz Paneth,1928 **The Structures of Practical**

**Knowledge** Matteo Valleriani,2017-02-20 The Structures of Practical Knowledge investigates the nature of practical knowledge why how when and by whom it is codified and once codified how this knowledge is structured The inquiry unfolds in a series of fifteen case studies which range in focus from early modern Italy to eighteenth century China At the heart of each study is a shared definition of practical knowledge that is knowledge needed to obtain a certain outcome whether that be an artistic or mechanical artifact a healing practice or a mathematical result While the content of practical knowledge is widely variable this study shows that all practical knowledge is formally equivalent in following a defined workflow as reflected in a construction procedure a recipe or an algorithm As explored in the volume s fifteen contributions there are three levels at which structures of practical knowledge may be understood and examined At the most immediate level there are the individual workflows that encompasses practical knowledge itself Probing further it is possible to examine the structure of practical knowledge as it is externalized and codified in texts drawings and artifacts such as models Finally practical knowledge is also related to social structures which fundamentally determine its dissemination and evolution into new knowledge structures The social structures of professionals and institutions represent the critical means by which practical knowledge takes form These actors are the agents of codification and by means of selection appropriation investment and knowledge development they determine the formation of new structures of practical knowledge On a more abstract level the creation of new knowledge structures is understood as constituting the basis for the further development of scientific knowledge Rich in subject matter and incisive in the theory it lays out this volume represents an important contribution to the history of science and epistemology Individually the fifteen case studies encompassing the history of architecture mining brewing glass production printing ballistics mechanics cartography cosmology and astronomy are replete with original research and offer new insights into the history of science Taken together the contributions remodel historical epistemology as a whole elucidating the underlining knowledge structures that transcend disciplinary boundaries and that unite practitioners across time and space **The New Knowledge** Robert Kennedy Duncan,1914 *Beware the*

H. Bernstein, 2024-11-13 This book is Volume III of a three volume book plus accompanying website [www.bookaboutbooks.com](http://www.bookaboutbooks.com) which adds to subjects already in the book or presents some books and subjects not contained in the books The other volumes are available from the same booksellers as this volume A Book about Books discusses what nonfiction books and subjects the author believes are important to know about This book tries to point to problems in how we live and to see if books have any answers Even though the books are complete the author will update the website periodically in the future E H Bernstein is a former librarian turned author The subtitle of the book describes the author s objective A handbook in three volumes to a choice of essential books writers and subjects in order to understand the world we live in about big questions and possible answers about books and writers that may improve people s lives about neglected writers and other books and subjects A Book about Books attempts to share what the author has learned from nearly 50 years of nonfiction reading and to provide the reader with samples of the most important authors and subjects from that reading While the book is based on research it is intended to be a handbook or guide by trying to make that research understandable to the general reader and

to students and for teachers by pointing to what the author believes is missing from today's education. A curriculum proposal for college teachers is on the author's website. Note about how the volumes are related: each chapter is on a separate subject. So the chapters can be read individually but the full message requires reading all the volumes. Volume I is important but preliminary to the more important Volumes II and III. Note also that the book is not just about books since other sources are also mentioned. The author believes we should listen to many voices so the book draws on many types of writers from different times and countries. The author says: A contemporary writer once said that one of the purposes of writing is that books should be useful. I hope that my book will be of use.

The depth psychological work of Carl G. Jung, the theatre techniques of Michael Chekhov, and Rudolf Steiner infuse this Great Work.
