[Contemporary Issues Shaping China's Civil Aviation Policy](#) Alan Williams, 2016-05-13 The emergence of China as a future major participant in international aviation raises some interesting questions especially from a strategic policy perspective The progressive shift from a command to a mixed market economy under the central leadership of the Beijing administration now finds itself faced with the needs to balance a strategic duality in the context of the role of China's civil aviation industry In a very real sense this situation requires the

design and accommodation of a growing role for China's mainstream carriers within the operational context of the need to meet the complex challenges from increasing international market competition. In parallel with such major external pressures, central government must also accommodate domestic priorities with regard to internal economic development. The fruits of economic progress as a function of market reform are commonly understood to have positively reshaped the lives of only a proportion of the national population to date. The need to create greater access to economic growth for the more remote western and northern provinces has required that the rapid development of airports become a factor in the planning and allocation of developmental priorities. To complicate matters further, prevailing requirements of airspace defence remain a major parameter within the larger context of national aviation policy. This book explores the political, economic and strategic issues raised by the inevitable tension between the domestic and international aspects of Beijing's current civil aviation strategy. It also seeks to identify some of the problems that face the industry as a key sector in the larger context of macroeconomic reform and the further pressures now being exerted by China's membership of the WTO.

The Oxford Illustrated History of Modern Europe T. C. W. Blanning, 2001-01-11. Written by an international team of leading scholars, *The Oxford History of Modern Europe* traces Europe's turbulent history from the beginnings of the Revolution in France to the dawn of two World Wars, to the breakup of the Soviet Union to today's kaleidoscope of nation states. The achievements and failures of key figures from many arenas—politics, technology, warfare, religion, and the arts—among them are drawn vividly, and social, cultural, and economic insights are included alongside the record of geopolitical strife. We read of the personality cult as exemplified by the Soviet portraits glorifying Lenin; the importance of the nylon stocking in the post-World War II economic boom; the influence of religion as five new nations—Serbia, Montenegro, Bulgaria, Romania, and Albania—emerged between 1871 and 1914, an influence that continues to be both vigorous and deadly; and the confrontation between traditional and modern cultures captured as the railway age began in Russia. Beautifully illustrated with over 200 pictures in color and black and white, this insightful book offers an unparalleled, informed perspective on the history of an ever-changing continent.

Examination of the U.S. Air Force's Science, Technology, Engineering, and Mathematics (STEM) Workforce Needs in the Future and Its Strategy to Meet Those Needs National Research Council, Division on Engineering and Physical Sciences, Air Force Studies Board, Committee on Examination of the U.S. Air Force's Science, Technology, Engineering, and Mathematics (STEM) Workforce Needs in the Future and Its Strategy to Meet Those Needs, 2010-11-09. The Air Force requires technical skills and expertise across the entire range of activities and processes associated with the development, fielding, and employment of air space and cyber operational capabilities. The growing complexity of both traditional and emerging missions is placing new demands on education, training, career development, system acquisition, platform sustainment, and development of operational systems. While in the past the Air Force's technologically intensive mission has been highly attractive to individuals educated in

science technology engineering and mathematics STEM disciplines force reductions ongoing military operations and budget pressures are creating new challenges for attracting and managing personnel with the needed technical skills Assessments of recent development and acquisition process failures have identified a loss of technical competence within the Air Force that is in house or organic competence as opposed to contractor support as an underlying problem These challenges come at a time of increased competition for technical graduates who are U S citizens an aging industry and government workforce and consolidations of the industrial base that supports military systems In response to a request from the Deputy Assistant Secretary of the Air Force for Science Technology and Engineering the National Research Council conducted five fact finding meetings at which senior Air Force commanders in the science and engineering acquisition test operations and logistics domains provided assessments of the adequacy of the current workforce in terms of quality and quantity **Annual**
