A Modern Introduction to Probability and Statistics F.M. Dekking, C. Kraaikamp, H.P. Lopuhaä, L.E. Meester, 2006-03-30

Many current texts in the area are just cookbooks and as a result students do not know why they perform the methods they are taught or why the methods work. The strength of this book is that it readdresses these shortcomings by using examples often from real life and using real data the authors show how the fundamentals of probabilistic and statistical theories arise intuitively. A Modern Introduction to Probability and Statistics has numerous quick exercises to give direct feedback to students. In addition there are over 350 exercises half of which have answers of which half have full solutions. A website gives access to the data files used in the text and for instructors the remaining solutions. The only pre requisite is a first course in calculus the text covers standard statistics and probability material and develops beyond traditional parametric models to the Poisson process and on to modern methods such as the bootstrap.

**Modern Construction Management** Prof. Frank Harris, Prof. Ronald McCaffer, 2013-02-28. This new edition of a core undergraduate textbook for construction managers reflects current best practice, topical industry preoccupations and latest developments in courses and fundamental subjects for students. While the construction process still requires traditional skills, changes over recent decades today demand improved understanding of modern business production and contractual practices. The authors have responded accordingly and the book has undergone a thorough re-write eliminating some of the older material and adding new processes now considered essential to achieving lean construction. Particular emphasis is given for example to supply chains and networks, value and risk management, BIM, ICT, project arrangements, corporate social responsibility, training, health and welfare and environmental sustainability. Modern Construction Management presents construction as a socially responsible, innovative, carbon reducing, manager involved, people orientated, crisis free industry that is efficient and cost effective. The overall themes for the Seventh Edition are: Drivers for efficiency, lean construction, underpinning production management and off site production methods, Sustainability reflecting the transition to a low carbon economy, Corporate Social Responsibility embracing health, safety, modernistic contracts, effective procurement and employment issues, Building Information Management directed towards the improvement of construction management systems. The comprehensive selection of worked examples based on real and practical situations in construction management and methods will help to consolidate learning. A companion website at [www.wiley.com/go/MCM7](http://www.wiley.com/go/MCM7) offers invaluable support material for both tutors and students: Solutions to the self learning exercises, PowerPoint slides with discussion topics, Journal and web references. Structured to reflect site business and corporate responsibilities of managers in construction, the book continues to provide strong coverage of the salient elements required for developing and equipping the modern construction manager with the competencies and skills for both technical and business related areas.
