Modern Nmr Spectroscopy A Guide For Chemists:

Modern NMR Spectroscopy Jeremy K. M. Sanders, Brian K. Hunter, 1987 This book provides a non mathematical descriptive approach to modern NMR spectroscopy taking examples from organic inorganic and biological chemistry It also contains much practical advice about the acquisition and use of spectra

Modern NMR Spectroscopy Jeremy K. M. Sanders, Brian K. Hunter, 1993 This book provides a non mathematical descriptive approach to modern NMR spectroscopy taking examples from organic inorganic and biological chemistry It also contains much practical advice about the acquisition and use of spectra Starting from the simple one pulse sequence the text employs a building block approach to lead naturally to multiple pulse and two dimensional NMR Spectra of readily available compounds illustrate each technique One and two dimensional methods are integrated in three chapters which show how to solve problems by making connections between spins through bonds through space or through exchange There are also chapters on spectrum editing and solids The final chapter contains a case history which attempts to weave the many strands of the text into a coherent strategy This second edition reflects the progress made by NMR in the past few years there is greater emphasis on inorganic nuclei some two color spectra are used the treatment of heteronuclear experiments has moved from direct to inverse detection many new examples and spectra have been included and the literature to early 1992 has been covered Like the first edition this work will be highly useful for all NMR spectroscopists chemists academic and industrial researchers and advanced undergraduate and graduate students needing a clear guide to this valuable technology

Modern NMR Spectroscopy Jeremy K. M. Sanders, 1993-01-01 Nuclear magnetic resonance NMR spectroscopy is the most powerful research tool used in chemistry today but many chemists have yet to realize its true potential Recent advances in NMR have led to a formidable array of new techniques and acronyms which leaves even the professional spectroscopist bewildered How then can chemists decide which approach will solve their particular structural or mechanistic problem This book provides a non mathematical descriptive approach to modern NMR spectroscopy taking examples from organic inorganic and biological chemistry It also contains much practical advice about the acquisition and use of spectra Starting from the simple one pulse sequence the text employs a building block approach to lead naturally to multiple pulse and two dimensional NMR Spectra of readily available compounds illustrate each technique One and two dimensional methods are integrated in three chapters which show how to solve problems by making connections between spins through bonds through space or through exchange There are also chapters on spectrum editing and solids The final chapter contains a case history which attempts to weave the many strands of the text into a coherent strategy This second edition reflects the progress made by NMR in the past few years there is a greater emphasis on inorganic nuclei some two colour spectra are used the treatment of heteronuclear experiments has moved from direct to inverse detection many new examples and spectra have been included and the literature to early 1992 has been covered An accompanying text Modern NMR spectroscopy A workbook of chemical problems by Jeremy Sanders

Edwin Constable and Brian Hunter is available from OUP Using a combination of worked examples and set problems this workbook provides a practical guide to the accurate interpretation of NMR spectra which will be of value to students and professional scientists alike

Structure Elucidation by Modern NMR H. Duddeck, W. Dietrich, 2012-12-06 For several years we have been organizing seminars and workshops on the application of modern one and two dimensional NMR methods at the faculty of chemistry in the Ruhr University Bochum FRG and elsewhere addressing researchers and graduate students who work in the field of organic and natural products chemistry In 1987 we wrote a workbook *Strukturaufklärung mit moderner NMR Spektroskopie* Steinkopff Darmstadt FRG 1988 in German language based on our experience in these courses Many of the exercises described therein have been used in such courses and some of them have been shaped by the participants to a great extent The response of readers and discussions with colleagues from many countries encouraged us to produce an English translation in order to make the book accessible to a wider audience Moreover the content has been increased from 20 exercise examples in the German to 23 in the English version This book could not have been written in the present form without the help of a number of colleagues and therefore we acknowledge gratefully the generous supply of samples from and useful discussions with B Abegaz Addis Ababa Ethiopia U H Brinker Bingham New York USA E

Analysis of NMR Spectra R. A. Hoffman, S. Forsen, B. Gestblom, 2012-12-06 Nuclear magnetic resonance spectroscopy which has evolved only within the last 20 years has become one of the very important tools in chemistry and physics The literature on its theory and application has grown immensely and a comprehensive and adequate treatment of all branches by one author or even by several becomes increasingly difficult This series is planned to present articles written by experts working in various fields of nuclear magnetic resonance spectroscopy and will contain review articles as well as progress reports and original work Its main aim however is to fill a gap existing in literature by publishing articles written by specialists which take the reader from the introductory stage to the latest development in the field The editors are grateful to the authors for the time and effort spent in writing the articles and for their invaluable cooperation The Editors
