Physical Methods In Agriculture Approach To Precision And Quality:

Physical Methods in Agriculture Jirí Blahovec, Miroslav Kutílek, 2012-12-06 The first attempts to use physical methods in agriculture can be found in nineteenth century as a necessary component of farm and food machinery. There were mechanics, electricity and physical chemistry that were the first physical disciplines used in agriculture and food industry. In the same time period the studies on physical properties of soils started to be one of main topics of soil science. The twentieth century was a century of research on physical properties of agromaterials. The physical properties of agromaterials have been studied e.g. in the USA where a big role has been played by ASAE 1907 and in the Soviet Union where the special Institute of Agrophysics was founded 1932 by Academician Ioffe. The ASAE's activity was enlarged in 1960s and 1970s especially with the role playing by the Mohsenin's group and its followers. At that time the Institute of Agrophysics of Polish Academy of Sciences was founded in Lublin and conferences on physical methods in agriculture began to be organised. The participants of the last conference Physical Methods in Agriculture Approach to Precision and Quality held on August 27-30 2001 have prepared the basis for this book. Part of the conference participants decided to enlarge their conference papers to be more general and more instructive in relation to further development of the science. New papers prepared under this decision were reviewed, discussed and revised repeatedly to be presented in this book.

Physical Methods in Agriculture Jiří Blahovec, Martin Libra, 2001 **Physical Methods in Agriculture** Česká zemědělská univerzita v Praze, 2001 *Advances in Seed Quality Evaluation and Improvement* Bidhan Roy, Gopal Shukla, Vijay Dunna, Priyanka Sharma, Prabha Shankar Shukla, 2025-05-19 This book discusses various aspects of Seed Science and Technology including seed production, seed certification, seed quality enhancements, seed testing and harvesting and post harvest management. Continued efforts are being made to preserve plant genetic resources over long term in order to conserve biodiversity and provide food security. Seed and germplasm repositories hold high importance in this regard. Various technologies such as cryopreservation are being commonly employed to preserve seeds and plant tissues at extremely low temperatures. This book discusses the advancements of data storage and information management systems that have aided in the creation of extensive seed databases and thus enabling researchers to quickly catalogue and access data on seed kinds, properties and availability. This book also explains the sophisticated technologies such as nanobiotechnology, machine learning, artificial intelligence, magnetic resonance and multispectral imaging which are currently being used for examining seed quality, genetic analysis, seed preservation and seed handling operations. The scope of these technologies in increasing the effectiveness and precision of seed research, developing better crop varieties and promoting sustainable environmental preservation has also been covered. This book is a reference source for Scientists, researchers and authorities involved in the production and certification of seeds. It is also valuable for seed experts working in the public and commercial sectors globally.
